Thomas Hobbes

OF COMMONWEALTH

Thomas Hobbes

[1588-1679]

Before he was fifteen years old, Thomas Hobbes entered Oxford and immediately acquired a dislike for universities which lasted the rest of his life. On his own account he became a classical scholar and, after he had passed his fortieth year, turned to philosophy by way of mathematics. In 1640 he abandoned England for France because of the threatening civil war. For eleven years he lived in close association with the most eminent philosophers and scientists of Paris, and there wrote his master work, *Leviathan*, of which *Of Commonwealth* is Part Two. The essence of the commonwealth is, according to Hobbes, ". . . a great multitude, by mutual consents one with another, have made themselves every one the author, to the end that he [the sovereign power of the commonwealth] may use the strength and means of them all, as he shall think expedient, for the peace and common defense."

OF COMMONWEALTH

THOMAS HOBBS

CHAPTER XVII

Of the Causes, Generations, and Definition of a Commonwealth

The final cause, end, or design of men who naturally love liberty and dominion over others, in the introduction of that restraint upon themselves in which we see them live in commonwealths, is the foresight of their own preservation, and of a more contented life thereby; that is to say, of getting themselves out from that miserable condition of war, which is necessarily consequent, as hath been shown in Chapter XIII, to the natural passions of men, when there is no visible power to keep them in awe, and tie them by fear of punishment to the performance of their covenants and observation of those laws of nature set down in the fourteenth and fifteenth chapters.

For the laws of nature, as justice, equity, modesty, mercy, and, in sum, *doing to others as we would be done to*, of themselves, without the terror of some power to cause them to be observed, are contrary to our natural passions, that carry us to partiality, pride, revenge, and the like. And covenants,

without the sword, are but words, and of no strength to secure a man at all. Therefore notwithstanding the laws of nature, which everyone hath then kept, when he has the will to keep them when he can do it safely; if there be no power erected, or not great enough for our security, every man will, and may, lawfully rely on his own strength and art, for caution against all other men. And in all places where men have lived by small families, to rob and spoil one another has been a trade, and so far from being reputed against the law of nature, that the greater spoils they gained, the greater was their honor; and men observed no other laws therein but the laws of honor; that is, to abstain from cruelty, leaving to men their lives, and instruments of husbandry. And as small families did then; so now do cities and kingdoms, which are but greater families, for their own security enlarge their dominions, upon all pretenses of danger and fear of invasion, or assistance that may be given to invaders, and endeavor as much as they can to subdue or weaken their neighbors, by open force and secret arts, for want of other caution, justly; and are remembered for it in after ages with honor.

Nor is it the joining together of a small number of men, that gives them this security; because in small numbers, small additions on the one side or the other make the advantage of strength so great, as is sufficient to carry the victory, and therefore gives encouragement to an invasion. The multitude sufficient to confide in for our security, is not determined by any certain number, but by comparison with the enemy we fear; and is then sufficient, when the odds of the enemy is not of so visible and conspicuous moment, to determine the event of war, as to move him to attempt.

And be there never so great a multitude, yet if their actions be directed according to their particular judgments and particular appetites, they can expect thereby no defense nor protection, neither against a common enemy nor against the injuries of one another. For being distracted in opinions concerning the best use and application of their strength, they do not help but hinder one another; and reduce their strength

by mutual opposition to nothing: whereby they are easily, not only subdued by a very few that agree together; but also when there is no common enemy, they make war upon each other, for their particular interests. For if we could suppose a great multitude of men to consent in the observation of justice, and other laws of nature, without a common power to keep them all in awe, we might as well suppose all mankind to do the same; and then there neither would be, nor need to be any civil government or commonwealth at all, because there would be peace without subjection.

Nor is it enough for the security, which men desire should last all the time of their life, that they be governed and directed by one judgment for a limited time, as in one battle or one war. For though they obtain a victory by their unanimous endeavor against a foreign enemy; yet afterwards, when either they have no common enemy, or he that by one part is held for an enemy, is by another part held for a friend, they must needs by the difference of their interests dissolve, and fall again into a war amongst themselves.

It is true that certain living creatures, as bees and ants, live sociably one with another, which are therefore by Aristotle numbered amongst political creatures; and yet have no other direction than their particular judgments and appetites; nor speech, whereby one of them can signify to another what he thinks expedient for the common benefit: and therefore some man may perhaps desire to know why mankind cannot do the same. To which I answer:

First, that men are continually in competition for honor and dignity, which these creatures are not; and consequently amongst men there ariseth on that ground, envy and hatred, and finally war; but amongst these not so.

Secondly, that amongst these creatures, the common good differeth not from the private; and being by nature inclined to their private, they procure thereby the common benefit. But man, whose joy consisteth in comparing himself with other men, can relish nothing but what is eminent.

Thirdly, that these creatures, having not, as man, the use

of reason, do not see, nor think they see, any fault in the administration of their common business; whereas amongst men, there are very many that think themselves wiser, and able to govern the public better, than the rest; and these strive to reform and innovate, one this way, another that way; and thereby bring it into distraction and civil war.

Fourthly, that these creatures, though they have some use of voice in making known to one another their desires and other affections; yet they want that art of words by which some men can represent to others, that which is good in the likeness of evil, and evil in the likeness of good, and augment or diminish the apparent greatness of good and evil; discontenting men and troubling their peace at their pleasure.

Fifthly, irrational creatures cannot distinguish between *injury* and *damage*; and therefore as long as they be at ease, they are not offended with their fellows: whereas man is then most troublesome when he is most at ease; for then it is that he loves to shew his wisdom, and control the actions of them that govern the commonwealth.

Lastly, the agreement of these creatures is natural; that of men is by covenant only, which is artificial: and therefore it is no wonder if there be somewhat else required, besides covenant, to make their agreement constant and lasting; which is a common power, to keep them in awe, and to direct their actions to the common benefit.

The only way to erect such a common power, as may be able to defend them from the invasion of foreigners and the injuries of one another, and thereby to secure them in such sort as that, by their own industry, and by the fruits of the earth, they may nourish themselves and live contentedly; is, to confer all their power and strength upon one man, or upon one assembly of men, that may reduce all their wills, by plurality of voices, unto one will: which is as much as to say, to appoint one man, or assembly of men, to bear their person; and everyone to own and acknowledge himself to be author of whatsoever he that so beareth their person, shall act or cause to be acted in those things which concern the common

peace and safety; and therein to submit their wills, everyone to his will, and their judgments, to his judgment. This is more than consent, or concord; it is a real unity of them all, in one and the same person, made by covenant of every man with every man, in such manner as if every man should say to every man, "*I authorize and give up my right of governing myself to this man, or to this assembly of men, on this condition, that thou give up thy right to him, and authorize all his actions in like manner.*" This done, the multitude so united in one person, is called a *commonwealth*, in Latin *civitas*. This is the generation of that great LEVIATHAN, or rather, to speak more reverently, of that *mortal god*, to which we owe under the *immortal God*, our peace and defense. For by this authority, given him by every particular man in the commonwealth, he hath the use of so much power and strength conferred on him, that by terror thereof he is enabled to perform the wills of them all, to peace at home and mutual aid against their enemies abroad. And in him consisteth the essence of the commonwealth; which, to define it, is *one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defense.*

And he that carrieth this person, is called *sovereign*, and said to have sovereign power; and everyone besides, his *subject*.

The attaining to this sovereign power is by two ways. One, by natural force; as when a man maketh his children to submit themselves and their children to his government, as being able to destroy them if they refuse; or by war subdueth his enemies to his will, giving them their lives on that condition. The other, is when men agree amongst themselves to submit to some man, or assembly of men, voluntarily, on confidence to be protected by him against all others. This latter, may be called a political commonwealth, or commonwealth by *institution*; and the former, a commonwealth by *acquisition*. And first, I shall speak of a commonwealth by institution.

CHAPTER XVIII

Of the Rights of Sovereigns by Institution

A commonwealth is said to be *instituted*, when a multitude of men do agree and covenant, everyone with everyone, that to whatsoever man, or assembly of men, shall be given by the major part the right to present the person of them all, that is to say, to be their *representative*; everyone, as well he that voted for it as he that voted against it, shall authorize all the actions and judgments of that man, or assembly of men, in the same manner as if they were his own, to the end to live peaceably amongst themselves and be protected against other men.

From this institution of a commonwealth are derived all the *rights* and *faculties* of him, or them, on whom sovereign power is conferred by the consent of the people assembled.

First, because they covenant, it is to be understood they are not obliged by former covenant to anything repugnant hereunto. And consequently they that have already instituted a commonwealth, being thereby bound by covenant to own the actions and judgments of one, cannot lawfully make a new covenant amongst themselves, to be obedient to any other, in anything whatsoever, without his permission. And therefore, they that are subject to a monarch, cannot without his leave cast off monarchy, and return to the confusion of a disunited multitude; nor transfer their person from him that beareth it, to another man, or other assembly of men: for they are bound, every man to every man, to own, and be reputed author of all, that he that already is their sovereign shall do and judge fit to be done; so that any one man dissenting, all the rest should break their covenant made to that man, which is injustice: and they have also every man given the sovereignty to him that beareth their person; and therefore if they depose him, they take from him that which is his own, and so again it is injustice. Besides, if he that attempteth to depose his sovereign, be killed or punished by him for such

attempt, he is author of his own punishment, as being by the institution, author of all his sovereign shall do; and because it is injustice for a man to do anything for which he may be punished by his own authority, he is also upon that title, unjust. And whereas some men have pretended for their disobedience to their sovereign, a new covenant, made not with men but with God, this also is unjust: for there is no covenant with God, but by mediation of somebody that representeth God's person; which none doth but God's lieutenant, who hath the sovereignty under God. But this pretense of covenant with God, is so evident a lie, even in the pretenders' own consciences, that it is not only an act of an unjust, but also of a vile and unmanly disposition.

Secondly, because the right of bearing the person of them all, is given to him they make sovereign, by covenant only of one to another, and not of him to any of them; there can happen no breach of covenant on the part of the sovereign; and consequently none of his subjects, by any pretense of forfeiture, can be freed from his subjection. That he which is made sovereign maketh no covenant with his subjects beforehand, is manifest; because either he must make it with the whole multitude, as one party to the covenant, or he must make a several covenant with every man. With the whole, as one party, it is impossible, because as yet they are not one person: and if he make so many several covenants as there be men, those covenants after he hath the sovereignty are void; because what act soever can be pretended by any one of them for breach thereof, is the act both of himself and of all the rest, because done in the person, and by the right of every one of them in particular. Besides, if any one, or more of them, pretend a breach of the covenant made by the sovereign at his institution; and others, as one other of his subjects, or himself alone, pretend there was no such breach: there is in this case, no judge to decide the controversy; it returns therefore to the sword again; and every man recovereth the right of protecting himself by his own strength, contrary to the design they had in the institution. It is therefore in vain to grant sovereignty by way of precedent cove-

nant. The opinion that any monarch receiveth his power by covenant, that is to say, on condition, proceedeth from want of understanding this easy truth, that covenants being but words and breath, have no force to oblige, contain, constrain, or protect any man, but what it has from the public sword; that is, from the untied hands of that man, or assembly of men that hath the sovereignty, and whose actions are avouched by them all, and performed by the strength of them all, in him united. But when an assembly of men is made sovereign, then no man imagineth any such covenant to have passed in the institution; for no man is so dull as to say, for example, the people of Rome made a covenant with the Romans, to hold the sovereignty on such or such conditions; which not performed, the Romans might lawfully depose the Roman people. That men see not the reason to be alike in a monarchy and in a popular government, proceedeth from the ambition of some that are kinder to the government of an assembly, whereof they may hope to participate, than of monarchy, which they despair to enjoy.

Thirdly, because the major part hath by consenting voices declared a sovereign, he that dissented must now consent with the rest; that is, be contented to avow all the actions he shall do, or else justly be destroyed by the rest. For if he voluntarily entered into the congregation of them that were assembled, he sufficiently declared thereby his will, and therefore tacitly covenanted to stand to what the major part should ordain; and therefore if he refuse to stand thereto, or make protestation against any of their decrees, he does contrary to his covenant, and therefore unjustly. And whether he be of the congregation or not, and whether his consent be asked or not, he must either submit to their decrees, or be left in the condition of war he was in before; wherein he might without injustice be destroyed by any man whatsoever.

Fourthly, because every subject is by this institution author of all the actions and judgments of the sovereign instituted; it follows that whatsoever he doth, it can be no injury to any of his subjects, nor ought he to be by any of them accused of injustice. For he that doth anything by authority from

another, doth therein no injury to him by whose authority he acteth: but by this institution of a commonwealth, every particular man is author of all the sovereign doth: and consequently he that complaineth of injury from his sovereign, complaineth of that whereof he himself is author; and therefore ought not to accuse any man but himself; no nor himself of injury, because to do injury to one's self, is impossible. It is true that they that have sovereign power may commit iniquity, but not injustice, or injury, in the proper signification.

Fifthly, and consequently to that which was said last, no man that hath sovereign power can justly be put to death, or otherwise in any manner by his subjects punished. For seeing every subject is author of the actions of his sovereign, he punisheth another for the actions committed by himself.

And because the end of this institution, is the peace and defense of them all, and whosoever has right to the end has right to the means; it belongeth of right, to whatsoever man or assembly that hath the sovereignty, to be judge both of the means of peace and defense, and also of the hindrances and disturbances of the same; and to do whatsoever he shall think necessary to be done, both beforehand, for the preserving of peace and security, by prevention of discord at home and hostility from abroad, and, when peace and security are lost, for the recovery of the same. And therefore,

Sixthly, it is annexed to the sovereignty, to be judge of what opinions and doctrines are averse, and what conducing to peace; and consequently, on what occasions, how far, and what men are to be trusted withal, in speaking to multitudes of people; and who shall examine the doctrines of all books before they be published. For the actions of men proceed from their opinions; and in the well-governing of opinions consisteth the well-governing of men's actions, in order to their peace and concord. And though in matter of doctrine nothing ought to be regarded but the truth, yet this is not repugnant to regulating the same by peace. For doctrine repugnant to peace can no more be true, than peace and concord can be against the law of nature. It is true that in a com-

monwealth, where, by the negligence or unskillfulness of governors and teachers, false doctrines are by time generally received; the contrary truths may be generally offensive. Yet the most sudden and rough bursting in of a new truth that can be, does never break the peace, but only sometimes awake the war. For those men that are so remissly governed, that they dare take up arms to defend or introduce an opinion, are still in war; and their condition not peace, but only a cessation of arms for fear of one another; and they live, as it were, in the precincts of battle continually. It belongeth therefore to him that hath the sovereign power, to be judge, or constitute all judges of opinions and doctrines, as a thing necessary to peace; thereby to prevent discord and civil war.

Seventhly, is annexed to the sovereignty, the whole power of prescribing the rules, whereby every man may know what goods he may enjoy, and what actions he may do, without being molested by any of his fellow-subjects; and this is it men call *propriety*. For before constitution of sovereign power, as hath already been shown, all men had right to all things; which necessarily causeth war: and therefore this propriety, being necessary to peace, and depending on sovereign power, is the act of that power, in order to the public peace. These rules of propriety, or *meum* and *tuum*, and of good, evil, lawful, and unlawful in the actions of subjects, are the civil laws; that is to say, the laws of each commonwealth in particular: though the name of civil law be now restrained to the ancient civil laws of the city of Rome; which being the head of a great part of the world, her laws at that time were in these parts the civil law.

Eighthly, is annexed to the sovereignty, the right of judicature; that is to say, of hearing and deciding all controversies which may arise concerning law, either civil or natural, or concerning fact. For without the decision of controversies, there is no protection of one subject against the injuries of another: the laws concerning *meum* and *tuum* are in vain; and to every man remaineth, from the natural and necessary appetite of his own conservation, the right of protecting himself by his private strength, which is the condition of war,

and contrary to the end for which every commonwealth is instituted.

Ninthly, is annexed to the sovereignty, the right of making war and peace with other nations and commonwealths; that is to say, of judging when it is for the public good, and how great forces are to be assembled, armed, and paid for that end; and to levy money upon the subjects, to defray the expenses thereof. For the power by which the people are to be defended, consisteth in their armies; and the strength of an army, in the union of their strength under one command: which command the sovereign instituted, therefore hath; because the command of the militia, without other institution, maketh him that hath it sovereign. And therefore whosoever is made general of an army, he that hath the sovereign power is always generalissimo.

Tenthly, is annexed to the sovereignty, the choosing of all counsellors, ministers, magistrates, and offices, both in peace and war. For seeing the sovereign is charged with the end, which is the common peace and defense, he is understood to have power to use such means as he shall think most fit for his discharge.

Eleventhly, to the sovereign is committed the power of rewarding with riches, or honor, and of punishing with corporal or pecuniary punishment, or with ignominy, every subject according to the law he hath formerly made; or if there be no law made, according as he shall judge most to conduce to the encouraging of men to serve the commonwealth, or deterring of them from doing disservice to the same.

Lastly, considering what value men are naturally apt to set upon themselves, what respect they look for from others, and how little they value other men; from whence continually arise amongst them, emulation, quarrels, factions, and at last war, to the destroying of one another and diminution of their strength against a common enemy: it is necessary that there be laws of honor, and a public rate of the worth of such men as have deserved or are able to deserve well of the commonwealth; and that there be force in the

hands of some or other, to put those laws in execution. But it hath already been shown, that not only the whole militia, or forces of the commonwealth, but also the judicature of all controversies, is annexed to the sovereignty. To the sovereign therefore it belongeth also to give titles of honor; and to appoint what order of place and dignity each man shall hold; and what signs of respect, in public or private meetings, they shall give to one another.

These are the rights which make the essence of sovereignty, and which are the marks whereby a man may discern in what man, or assembly of men, the sovereign power is placed and resideth. For these are incommunicable and inseparable. The power to coin money, to dispose of the estate and persons of infant heirs, to have pre-emption in markets, and all other statute prerogatives, may be transferred by the sovereign; and yet the power to protect his subjects be retained. But if he transfer the militia, he retains the judicature in vain, for want of execution of the laws; or if he grant away the power of raising money, the militia is in vain; or if he give away the government of doctrines, men will be frightened into rebellion with the fear of spirits. And so if we consider any one of the said rights, we shall presently see that the holding of all the rest will produce no effect in the conservation of peace and justice, the end for which all commonwealths are instituted. And this division is it whereof it is said, *a kingdom divided in itself cannot stand*: for unless this division precede, division into opposite armies can never happen. If there had not first been an opinion received of the greatest part of England, that these powers were divided between the King and the Lords and the House of Commons, the people had never been divided and fallen into this civil war; first between those that disagreed in politics, and after between the dissenters about the liberty of religion: which have so instructed men in this point of sovereign right; and there be few now in England that do not see that these rights are inseparable, and will be so generally acknowledged at the next return of peace; and so continue till their miseries are forgotten; and

no longer, except the vulgar be better taught than they have hitherto been.

And because they are essential and inseparable rights, it follows necessarily that in whatsoever words any of them seem to be granted away, yet if the sovereign power itself be not in direct terms renounced, and the name of sovereign no more given by the grantees to him that grants them, the grant is void: for when he has granted all he can, if we grant back the sovereignty, all is restored, as inseparably annexed thereunto.

This great authority being indivisible, and inseparably annexed to the sovereignty, there is little ground for the opinion of them that say of sovereign kings, though they be *singulis majores*, of greater power than every one of their subjects, yet they be *universis minores*, of less power than them all together. For if by "all together" they mean not the collective body as one person, then "all together" and "every one" signify the same, and the speech is absurd. But if by "all together" they understand them as one person, which person the sovereign bears, then the power of all together is the same with the sovereign's power, and so again the speech is absurd: which absurdity they see well enough when the sovereignty is in an assembly of the people, but in a monarch they see it not; and yet the power of sovereignty is the same in whomsoever it be placed.

And as the power, so also the honor of the sovereign, ought to be greater than that of any or all the subjects. For in the sovereignty is the fountain of honor. The dignities of lord, earl, duke, and prince are his creatures. As in the presence of the master, the servants are equal and without any honor at all; so are the subjects, in the presence of the sovereign. And though they shine some more, some less, when they are out of his sight; yet in his presence, they shine no more than the stars in the presence of the sun.

But a man may here object that the condition of subjects is very miserable, as being obnoxious to the lusts, and other irregular passions, of him or them that have so unlimited a

power in their hands. And commonly they that live under a monarch, think it the fault of monarchy; and they that live under the government of democracy, or other sovereign assembly, attribute all the inconvenience to that form of commonwealth; whereas the power in all forms, if they be perfect enough to protect them, is the same: not considering that the state of man can never be without some incommodity or other; and that the greatest that in any form of government can possibly happen to the people in general, is scarce sensible, in respect to the miseries and horrible calamities that accompany a civil war, or that dissolute condition of masterless men, without subjection to laws and a coercive power to tie their hands from rapine and revenge: nor considering that the greatest pressure of sovereign governors, proceedeth not from any delight or profit they can expect in the damage or weakening of their subjects, in whose vigor consisteth their own strength and glory; but in the restiveness of themselves, that unwillingly contributing to their own defense, make it necessary for their governors to draw from them what they can in time of peace, that they may have means on any emergent occasion or sudden need, to resist or take advantage on their enemies. For all men are by nature provided of notable multiplying glasses, that is their passions and self-love, through which every little payment appeareth a great grievance; but are destitute of those prospective glasses, namely moral and civil science, to see afar off the miseries that hang over them, and cannot without such payment be avoided.

CHAPTER XIX

Of the Several Kinds of Commonwealth by Institution, and of Succession to the Sovereign Power

The difference of commonwealths consisteth in the difference of the sovereign, or the person representative of all and

every one of the multitude. And because the sovereignty is either in one man, or in an assembly of more than one; and into that assembly either every man hath right to enter, or not everyone, but certain men distinguish from the rest; it is manifest, there can be but three kinds of commonwealth. For the representative must needs be one man, or more; and if more, then it is the assembly of all, or but of a part. When the representative is one man, then is the commonwealth a *monarchy*; when an assembly of all that will come together, then it is a *democracy*, or popular commonwealth; when an assembly of a part only, then it is called an *aristocracy*. Other kind of commonwealth there can be none; for either one, or more, or all, must have the sovereign power, which I have shown to be indivisible, entire.

There be other names of government in the histories and books of policy; as *tyranny*, and *oligarchy*; but they are not the names of other forms of government, but of the same forms misliked. For they that are discontented under *monarchy*, call it *tyranny*; and they that are displeased with *aristocracy*, call it *oligarchy*; so also, they which find themselves grieved under a *democracy*, call it *anarchy*, which signifies want of government; and yet I think no man believes, that want of government, is any new kind of government; nor by the same reason ought they to believe, that the government is of one kind, when they like it, and another, when they mislike it, or are oppressed by the governors.

It is manifest, that men who are in absolute liberty, may, if they please, give authority to one man, to represent them every one; as well as give such authority to any assembly of men whatsoever; and consequently may subject themselves, if they think good, to a monarch, as absolutely, as to any other representative. Therefore, where there is already erected a sovereign power, there can be no other representative of the same people, but only to certain particular ends, by the sovereign limited. For that were to erect two sovereigns; and every man to have his person represented by two actors, that by opposing one another, must needs divide that power, which, if men will live in peace, is indivisible; and thereby

reduce the multitude into the condition of war, contrary to the end for which all sovereignty is instituted. And therefore as it is absurd, to think that a sovereign assembly, inviting the people of their dominion, to send up their deputies, with power to make known their advice, or desires, should therefore hold such deputies, rather than themselves, for the absolute representatives of the people; so it is absurd also, to think the same in a monarchy. And I know not how this so manifest a truth, should of late be so little observed; that in a monarchy, he that had the sovereignty from a descent of six hundred years, was alone called sovereign, had the title of Majesty from every one of his subjects, and was notwithstanding never considered as their representative; the name without contradiction passing for the title of those men, which at his command were sent up by the people to carry their petitions, and give him, if he permitted it, their advice. Which may serve as an admonition, for those that are the true, and absolute representative of a people, to instruct men in the nature of that office, and to take heed how they admit of any other general representation upon any occasion whatsoever, if they mean to discharge the trust committed to them.

The difference between these three kinds of commonwealth, consisteth not in the difference of power; but in the difference of convenience, or aptitude to produce the peace, and security of the people; for which end they were instituted. And to compare monarchy with the other two, we may observe; first, that whosoever beareth the person of the people, or is one of that assembly that bears it, beareth also his own natural person. And though he be careful in his politic person to procure the common interest; yet he is more, or no less careful to produce the private good of himself, his family, kindred and friends; and for the most part, if the public interest chance to cross the private, he prefers the private: for the passions of men, are commonly more potent than their reason. From whence it follows, that where the public and private interest are most closely united, there is the public most advanced. Now in monarchy, the private

interest is the same with the public. The riches, power, and honor of a monarch arise only from the riches, strength, and reputation of his subjects. For no king can be rich, nor glorious, nor secure, whose subjects are either poor, or contemptible, or too weak through want or dissention, to maintain a way against their enemies: whereas in a democracy, or aristocracy, the public prosperity confers not so much to the private fortune of one that is corrupt, or ambitious, as doth many times a perfidious advice, a treacherous action, or a civil war.

Secondly, that a monarch receiveth counsel of whom, when, and where he pleaseth; and consequently may hear the opinion of men versed in the matter about which he deliberates, of what rank or quality soever, and as long before the time of action, and with as much secrecy, as he will. But when a sovereign assembly has need of counsel, none are admitted but such as have a right thereto from the beginning; which for the most part are of those who have been versed more in the acquisition of wealth than of knowledge; and are to give their advice in long discourses, which may, and do commonly excite men to action, but not govern them in it. For the *understanding* is by the flame of the passions never enlightened, but dazzled. Nor is there any place, or time, wherein an assembly can receive counsel with secrecy, because of their own multitude.

Thirdly, that the resolutions of a monarch are subject to no other inconstancy than that of human nature; but in assemblies, besides that of nature, there ariseth an inconstancy from the number. For the absence of a few, that would have the resolution once taken, continue firm, which may happen by security, negligence, or private impediments, or the diligent appearance of a few of the contrary opinion, undoes today, all that was concluded yesterday.

Fourthly, that a monarch cannot disagree with himself, out of envy, or interest; but an assembly may; and that to such a height, as may produce a civil war.

Fifthly, that in monarchy there is this inconvenience; that any subject, by the power of one man, for the enriching of

a favorite or flatterer, may be deprived of all he possesseth; which I confess is a great and inevitable inconvenience. But the same may as well happen, where the sovereign power is in an assembly: for their power is the same; and they are as subject to evil counsel, and to be seduced by orators, as a monarch by flatterers; and becoming one another's flatterers, serve one another's covetousness and ambition by turns. And whereas the favorites of monarchs are few, and they have none else to advance but their own kindred; the favorites of an assembly, are many; and the kindred much more numerous, than of any monarch. Besides, there is no favorite of a monarch, which cannot as well succor his friends, as hurt his enemies; but orators, that is to say, favorites of sovereign assemblies, though they have great power to hurt, have little to save. For to accuse, requires less eloquence, such is man's nature, than to excuse; and condemnation, than absolution more resembles justice.

Sixthly, that it is an inconvenience in monarchy, that the sovereignty may descend upon an infant, or one that cannot discern between good and evil; and consisteth in this, that the use of his power, must be in the hand of another man, or of some assembly of men, which are to govern by his right, and in his name; as curators, and protectors of his person, and authority. But to say there is inconvenience, in putting the use of the sovereign power, into the hand of a man, or an assembly of men; is to say that all government is more inconvenient, than confusion, and civil war. And therefore all the danger that can be pretended, must arise from the contention of those, that for an office of so great honor, and profit, may become competitors. To make it appear, that this inconvenience, proceedeth not from that form of government we call monarchy, we are to consider, that the precedent monarch hath appointed who shall have the tuition of his infant successor, either expressly by testament, or tacitly, by not controlling the custom in that case received; and then such inconvenience, if it happen, is to be attributed, not to the monarchy, but to the ambition, and injustice of the subjects; which in all kinds of government, where the people are

not well instructed in their duty, and the rights of sovereignty, is the same. Or else the precedent monarch hath not at all taken order for such tuition; and then the law of nature hath provided this sufficient rule, that the tuition shall be in him, that hath by nature most interest in the preservation of the authority of the infant, and to whom least benefit can accrue by his death, or diminution. For seeing every man by nature seeketh his own benefit, and promotion; to put an infant into the power of those, that can promote themselves by his destruction, or damage, is not tuition, but treachery. So that sufficient provision being taken, against all just quarrel, about the government under a child, if any contention arise to the disturbance of the public peace, it is not to be attributed to the form of monarchy, but to the ambition of subjects, and ignorance of their duty. On the other side, there is no great commonwealth, the sovereignty whereof is in a great assembly, which is not, as to consultations of peace, and war, and making of laws, in the same condition, as if the government were in a child. For as a child wants the judgment to dissent from counsel given him, and is thereby necessitated to take the advice of them, or him, to whom he is committed; so an assembly wanteth the liberty, to dissent from the counsel of the major part, be it good, or bad. And as a child has need of a tutor, or protector, to preserve his person and authority; so also, in great commonwealths, the sovereign assembly, in all great dangers and troubles, have need of *custodes libertatis*; that is, of dictators, or protectors of their authority; which are as much as temporary monarchs, to whom, for a time, they may commit the entire exercise of their power; and have, at the end of that time, been oftener deprived thereof, than infant kings, by their protectors, regents, or any other tutors.

Though the kinds of sovereignty be, as I have now shown, but three; that is to say, monarchy, where one man has it; or democracy, where the general assembly of subjects hath it; or aristocracy, were it is in an assembly of certain persons nominated, or otherwise distinguished from the rest; yet he that shall consider the particular commonwealths that have

been, and are in the world, will not perhaps easily reduce them to three, and may thereby be inclined to think there be other forms, arising from these mingled together. As for example, elective kingdoms; where kings have the sovereign power put into their hands for a time; or kingdoms, wherein the king hath a power limited; which governments, are nevertheless by most writers called monarchy. Likewise if a popular, or aristocratical commonwealth, subdue an enemy's country, and govern the same, by a president, procurator, or other magistrate; this may seem perhaps at first sight, to be a democratical, or aristocratical government. But it is not so. For elective kings, are not sovereigns, but ministers of the sovereign; not limited kings, sovereigns, but ministers of them that have the sovereign power; nor are those provinces which are in subjection to a democracy or aristocracy of another commonwealth, democratically or aristocratically governed, but monarchically.

And first, concerning an elective king, whose power is limited to his life, as it is in many places of Christendom at this day; or to certain years or months, as the dictator's power amongst the Romans; if he have right to appoint his successor, he is no more elective but hereditary. But if he have no power to elect his successor, then there is some other man, or assembly known, which after his decease may elect anew, or else the commonwealth dieth, and dissolveth with him, and returneth to the condition of war. If it be known who have the power to give the sovereignty after his death, it is known also that the sovereignty was in them before; for none have right to give that which they have not right to possess, and keep to themselves, if they think good. But if there be none that can give the sovereignty, after the decease of him that was first elected; then has he power, nay he is obliged by the law of nature, to provide, by establishing his successor, to keep those that had trusted him with the government, from relapsing into the miserable condition of civil war. And consequently he was, when elected, a sovereign absolute.

Secondly, that king whose power is limited, is not superior to him, or them that have the power to limit it; and he that

is not superior, is not supreme; that is to say not sovereign. The sovereignty therefore was always in that assembly which had the right to limit him; and by consequence the government not monarchy, but either democracy, or aristocracy; as of old time in Sparta; where the kings had a privilege to lead their armies; but the sovereignty was in the Ephori.

Thirdly, whereas heretofore the Roman people governed the land of Judea, for example, by a president; yet was not Judea therefore a democracy; because they were not governed by any assembly, into the which, any of them, had right to enter; nor an aristocracy; because they were not governed by any assembly, into which, any man could enter by their election: but they were governed by one person, which, though as to the people of Rome, was an assembly of the people, or democracy; yet as to the people of Judea, which had no right at all of participating in the government, was a monarch. For though where the people are governed by an assembly, chosen by themselves out of their own number, the government is called a democracy, or aristocracy; yet when they are governed by an assembly, not of their own choosing, it is a monarchy; not of one man, over another man; but of one people, over another people.

Of all these forms of government, the matter being mortal, so that not only monarchs, but also whole assemblies die, it is necessary for the conservation of the peace of men, that as there was order taken for an artificial man, so there be order also taken, for an artificial eternity of life; without which, men that are governed by an assembly, should return into the condition of war in every age; and they that are governed by one man, as soon as their governor dieth. This artificial eternity, is that which men call the right of *succession*.

There is no perfect form of government, where the disposing of the succession is not in the present sovereign. For if it be in any other particular man, or private assembly, it is in a person subject, and may be assumed by the sovereign at his pleasure; and consequently the right is in himself. And if it be in no particular man, but left to a new choice; then is

the commonwealth dissolved; and the right is in him that can get it; contrary to the intention of them that did institute the commonwealth, for their perpetual, and not temporary security.

In a democracy, the whole assembly cannot fail, unless the multitude that are to be governed fail. And therefore questions of the right of succession, have in that form of government no place at all.

In an aristocracy, when any of the assembly dieth, the election of another into his room belongeth to the assembly, as the sovereign, to whom belongeth the choosing of all counsellors and officers. For that which the representative doth, as actor, every one of the subjects doth, as author. And though the sovereign assembly may give power to others, to elect new men, for supply of their court; yet it is still by their authority, that the election is made; and by the same it may, when the public shall require it, be recalled.

The greatest difficulty about the right of succession, is in monarchy: and the difficulty ariseth from this, that at first sight, it is not manifest who is to appoint the successor; nor many times, who it is whom he hath appointed. For in both these cases, there is required a more exact ratiocination, than every man is accustomed to use. As to the question, who shall appoint the successor, of a monarch that hath the sovereign authority; that is to say, who shall determine of the right of inheritance, (for elective kings and princes have not the sovereign power in propriety, but in use only), we are to consider, that either he that is in possession, has right to dispose of the succession, or else that right is again in the dissolved multitude. For the death of him that hath the sovereign power in propriety, leaves the multitude without any sovereign at all; that is, without any representative in whom they should be united, and be capable of doing any one action at all; and therefore they are incapable of election of any new monarch; every man having equal right to submit himself to such as he thinks best able to protect him; or if he can, protect himself by his own sword; which is a return to confusion, and to the condition of a war of every man against

every man, contrary to the end for which monarchy had its first institution. Therefore it is manifest, that by the institution of monarchy, the disposing of the successor, is always left to the judgment and will of the present possessor.

And for the question, which may arise sometimes, who it is that the monarch in possession, hath designed to the succession and inheritance of his power; it is determined by his express words, and testament; or by other tacit signs sufficient.

By express words, or testament, when it is declared by him in his lifetime, *viva voce*, or by writing; as the first emperors of Rome declared who should be their heirs. For the word heir does not of itself imply the children, or nearest kindred of a man; but whomsoever a man shall any way declare, he would have to succeed him in his estate. If therefore a monarch declare expressly, that such a man shall be his heir, either by word or writing, then is that man immediately after the decease of his predecessor, invested in the right of being monarch.

But where testament, and express words are wanting, other natural signs of the will are to be followed; whereof the one is custom. And therefore where the custom is, that the next of kindred absolutely succeedeth, there also the next of kindred hath right to the succession; for that, if the will of him that was in possession had been otherwise, he might have declared the same in his lifetime. And likewise where the custom is, that the next of the male succeedeth, there also the right of succession is in the next of the kindred male, for the same reason. And so it is if the custom were to advance the female. For whatsoever custom a man may by a word control, and does not, it is a natural sign he would have that custom stand.

But where neither custom, nor testament hath preceded, there it is to be understood, first, that a monarch's will is, that the government remain monarchical; because he hath approved that government in himself. Secondly, that a child of his own, male, or female, be preferred before any other; because men are presumed to be more inclined by nature, to

advance their own children, than the children of other men; and of their own, rather a male than a female; because men, are naturally fitter than women, for actions of labor and danger. Thirdly, where his own issue faileth, rather a brother than a stranger; and so still the nearer in blood, rather than the more remote; because it is always presumed that the nearer of kin, is the nearer in affection; and it is evident that a man receives always, by reflection, the most honor from the greatness of his nearest kindred.

But if it be lawful for a monarch to dispose of the succession by words of contract, or testament, men may perhaps object a great inconvenience; for he may sell, or give his right of governing to a stranger; which, because strangers, that is, men not used to live under the same government, nor speaking the same language, do commonly undervalue one another, may turn to the oppression of his subjects; which is indeed a great inconvenience; but it proceedeth not necessarily from the subjection to a stranger's government, but from the unskillfulness of the governors, ignorant of the true rules of politics. And therefore the Romans when they had subdued many nations, to make their government digestible, were wont to take away that grievance, as much as they thought necessary, by giving sometimes to whole nations, and sometimes to principal men of every nation they conquered, not only the privileges, but also the name of Romans; and took many of them into the senate, and offices of charge, even in the Roman city. And this was it our most wise king, King James, aimed at, in endeavoring the union of his two realms of England and Scotland. Which if he could have obtained, had in all likelihood prevented the civil wars, which make both those kingdoms, at this present, miserable. It is not therefore any injury to the people, for a monarch to dispose of the succession by will; though by the fault of many princes, it hath been sometimes found inconvenient. Of the lawfulness of it, this also is an argument, that whatsoever inconvenience can arrive by giving a kingdom to a stranger, may arrive also by so marrying with strangers, as the right of succession may descend upon them; yet this by all men is accounted lawful.

CHAPTER XX

Of Dominion Paternal, and Despotical

A commonwealth *by acquisition*, is that, where the sovereign power is acquired by force; and it is acquired by force, when men singly, or many together by plurality of voices, for fear of death, or bonds, do authorize all the actions of that man, or assembly, that hath their lives and liberty in his power.

And this kind of dominion, or sovereignty, differeth from sovereignty by institution, only in this, that men who choose their sovereign, do it for fear of one another, and not of him whom they institute; but in this case, they subject themselves, to him they are afraid of. In both cases they do it for fear; which is to be noted by them, that hold all such covenants, as proceed from fear of death or violence, void; which if it were true, no man, in any kind of commonwealth, could be obliged to obedience. It is true, that in a commonwealth once instituted, or acquired, promises proceeding from fear of death or violence, are no covenants, nor obliging, when the thing promised is contrary to the laws; but the reason is not, because it was made upon fear, but because he that promiseth, hath no right in the thing promised. Also, when he may lawfully perform, and doth not, it is not the invalidity of the covenant, that absolveth him, but the sentence of the sovereign. Otherwise, whensoever a man lawfully promiseth, he unlawfully breaketh; but when the sovereign, who is the actor, acquitteth him, then he is acquitted by him that extorted the promise, as by the author of such absolution.

But the rights, and consequences of sovereignty, are the same in both. His power cannot, without his consent, be transferred to another; he cannot forfeit it; he cannot be accused by any of his subjects, of injury; he cannot be punished by them; he is judge of what is necessary for peace; and judge of doctrines; he is sole legislator; and supreme judge of controversies; and of the times, and occasions of war, and peace; to him it belongeth to choose magistrates, counsellors, commanders, and all other officers, and min-

isters; and to determine of rewards, and punishments, honor, and order. The reasons whereof, are the same which are alleged in the precedent chapter, for the same rights, and consequences of sovereignty by institution.

Dominion is acquired two ways; by generation, and by conquest. The right of dominion by generation, is that, which the parent hath over his children; and is called *paternal*. And is not so derived from the generation, as if therefore the parent had dominion over his child because he begat him; but from the child's consent, either express, or by other sufficient arguments declared. For as to the generation, God hath ordained to man a helper; and there be always two that are equally parents: the dominion therefore over the child, should belong equally to both; and he be equally subject to both, which is impossible; for no man can obey two masters. And whereas some have attributed the dominion to the man only, as being of the more excellent sex; they misreckon in it. For there is not always that difference of strength, or prudence between the man and the woman, as that the right can be determined without war. In commonwealths, this controversy is decided by the civil law; and for the most part, but not always, the sentence is in favor of the father; because for the most part commonwealths have been erected by the fathers, not by the mothers of families. But the question lieth now in the state of mere nature; where there are supposed no laws of matrimony; no laws for the education of children; but the law of nature, and the natural inclination of the sexes, one to another, and to their children. In this condition of mere nature, either the parents between themselves dispose of the dominion over the child by contract; or do not dispose thereof at all. If they dispose thereof, the right passeth according to the contract. We find in history that the Amazons contracted with the men of the neighboring countries, to whom they had recourse for issue, that the issue male should be sent back, but the female remain with themselves: so that the dominion of the females was in the mother.

If there be no contract, the dominion is in the mother. For in the condition of mere nature, where there are no matri-

monial laws, it cannot be known who is the father, unless it be declared by the mother; and therefore the right of dominion over the child dependeth on her will, and is consequently hers. Again, seeing the infant is first in the power of the mother, so as she may either nourish, or expose it; if she nourish it, it oweth its life to the mother; and is therefore obliged to obey her, rather than any other; and by consequence the dominion over it is hers. But if she expose it, and another find and nourish it, the dominion is in him that nourisheth it. For it ought to obey him by whom it is preserved; because preservation of life being the end, for which one man becomes subject to another, every man is supposed to promise obedience, to him, in whose power it is to save, or destroy him.

If the mother be the father's subject, the child, is in the father's power; and if the father be the mother's subject, as when a sovereign queen marrieth one of her subjects, the child is subject to the mother; because the father also is her subject.

If a man and woman, monarchs of two several kingdoms, have a child, and contract concerning who shall have the dominion of him, the right of the dominion passeth by the contract. If they contract not, the dominion followeth the dominion of the place of his residence. For the sovereign of each country hath dominion over all that reside therein.

He that hath dominion over the child, hath dominion also over the children of the child; and over their children's children. For he that hath dominion over the person of a man, hath dominion over all that is his; without which, dominion were but a title, without the effect.

The right of succession to paternal dominion, proceedeth in the same manner, as doth the right of succession of monarchy; of which I have already sufficiently spoken in the precedent chapter.

Dominion acquired by conquest, or victory in war, is that which some writers call *despotic*, from *Δεσπότης*, which signifieth a *lord*, or *master*; and is the dominion of the master over his servant. And this dominion is then acquired to the

victor, when the vanquished, to avoid the present stroke of death covenanteth either in express words, or by other sufficient signs of the will, that so long as his life, and the liberty of his body is allowed him, the victor shall have the use thereof, at his pleasure. And after such covenant made, the vanquished is a *servant*, and not before: for by the word *servant*, whether it be derived from *servire*, to serve, or from *servare*, to save, which I leave to grammarians to dispute, is not meant a captive, which is kept in prison, or bonds, till the owner of him that took him, or bought him of one that did, shall consider what to do with him: for such men, commonly called slaves, have no obligation at all; but may break their bonds, or the prison; and kill, or carry away captive their master, justly: but one, that, being taken, hath corporal liberty allowed him; and upon promise not to run away, nor to do violence to his master, is trusted by him.

It is not therefore the victory, that giveth the right of dominion over the vanquished, but his own covenant. Nor is he obliged because he is conquered; that is to say, beaten, and taken, or put to flight; but because he cometh in, and submitteth to the victor; nor is the victor obliged by an enemy's rendering himself, without promise of life, to spare him for this his yielding to discretion; which obliges not the victor longer, than in his own discretion he shall think fit.

And that which men do, when they demand, as it is now called, *quarter*, which the Greeks called Ζωγρία, *taking alive*, is to evade the present fury of the victor, by submission, and to compound for their life, with ransom, or service: and therefore he that hath quarter, hath not his life given, but deferred till farther deliberation; for it is not a yielding on condition of life, but to discretion. And then only is his life in security, and his service due, when the victor hath trusted him with his corporeal liberty. For slaves that work in prisons; or fetters, do it not of duty, but to avoid the cruelty of their taskmasters.

The master of the servant, is master also of all he hath: and may exact the use thereof; that is to say, of his goods, of his labor, of his servants, and of his children, as often as he

shall think fit. For he holdeth his life of his master, by the covenant of obedience; that is, of owning, and authorizing whatsoever the master shall do. And in case the master, if he refuse, kill him, or cast him into bonds, or otherwise punish him for his disobedience, he is himself the author of the same; and cannot accuse him of injury.

In sum, the rights and consequences of both *paternal* and *despotic* dominion, are the very same with those of a sovereign by institution; and for the same reasons; which reasons are set down in the precedent chapter. So that for a man that is monarch of divers nations, whereof he hath, in one, sovereignty by institution of the people assembled, and in another by conquest, that is by the submission of each particular, to avoid death or bonds; to demand of one nation more than of the other, from the title of conquest, as being a conquered nation, is an act of ignorance of the rights of sovereignty; for the sovereign is absolute over both alike; or else there is no sovereignty at all; and so every man may lawfully protect himself, if he can, with his own sword, which is the condition of war.

By this it appears; that a great family, if it be not part of some commonwealth, is of itself, as to the rights of sovereignty, a little monarchy; whether that family consist of a man and his children; or of a man and his servants; or of a man, and his children, and servants together; wherein the father or master is the sovereign. But yet a family is not properly a commonwealth; unless it be of that power by its own number, or by other opportunities, as not to be subdued without the hazard of war. For where a number of men are manifestly too weak to defend themselves united, everyone may use his own reason in time of danger, to save his own life, either by flight, or by submission to the enemy, as he shall think best; in the same manner as a very small company of soldiers, surprised by an army, may cast down their arms, and demand quarter, or run away, rather than be put to the sword. And thus much shall suffice, concerning what I find by speculation, and education, of sovereign rights, from the nature, need, and designs of men, in erecting of com-

monwealths, and putting themselves under monarchs, or assemblies, entrusted with power enough for their protection. . . .

CHAPTER XXI

Of the Liberty of Subjects

Liberty, or freedom, signifieth, properly, the absence of opposition: by opposition, I mean external impediments of motion; and may be applied no less to irrational and inanimate creatures, than to rational. For whatsoever is so tied, or environed, as it cannot move but within a certain space, which space is determined by the opposition of some external body, we say it hath not liberty to go further. And so of all living creatures, whilst they are imprisoned or restrained, with walls or chains, and of the water whilst it is kept in by banks or vessels, that otherwise would spread itself into a larger space, we use to say, they are not at liberty to move in such manner, as without those external impediments they would. But when the impediment of motion is in the constitution of the thing itself, we use not to say it wants the liberty, but the power to move; as when a stone lieth still, or a man is fastened to his bed by sickness.

And according to this proper and generally received meaning of the word, a "freeman" is he that in those things which by his strength and wit he is able to do, is not hindered to do what he has a will to. But when the words "free" and "liberty" are applied to anything but bodies, they are abused; for that which is not subject to motion is not subject to impediment: and therefore, when it is said, for example, the way is free, no liberty of the way is signified, but of those that walk in it without stop. And when we say a gift is free, there is not meant any liberty of the gift, but of the giver, that was not

bound by any law or covenant to give it. So when we "speak freely," it is not the liberty of voice or pronunciation, but of the man, whom no law hath obliged to speak otherwise than he did. Lastly, from the use of the word *free-will*, no liberty can be inferred of the will, desire, or inclination, but the liberty of the man; which consisteth in this, that he finds no stop, in doing what he has the will, desire, or inclination to do.

Fear and liberty are consistent; as when a man throweth his goods into the sea for *fear* the ship should sink, he doth it nevertheless very willingly, and may refuse to do it if he will; it is therefore the action of one that was *free*: so a man sometimes pays his debt, only for fear of imprisonment, which because nobody hindered him from detaining, was the action of a man at *liberty*. And generally all actions which men do in commonwealths, for fear of the law, are actions which the doers had liberty to omit.

Liberty and necessity are consistent: as in the water, that hath not only *liberty*, but a *necessity* of descending by the channel; so likewise in the actions which men voluntarily do: which, because they proceed from their will, proceed from *liberty*; and yet, because every act of man's will, and every desire, and inclination proceedeth from some cause, and that from another cause, in a continual chain, whose first link is in the hand of God the first of all causes, proceed from *necessity*. So that to him that could see the connection of those causes, the necessity of all men's voluntary actions, would appear manifest. And therefore God, that seeth and disposeth all things, seeth also that the liberty of man in doing what he will, is accompanied with the necessity of doing that which God will, and no more nor less. For though men may do many things which God does not command, nor is therefore author of them; yet they can have no passion nor appetite to anything of which appetite God's will is not the cause. And did not His will assure the *necessity* of man's will, and consequently of all that on man's will dependeth, the *liberty* of men would be a contradiction, and impediment to the omnipotence and liberty of God. And this shall suf-

fice, as to the matter in hand, of that natural liberty, which only is properly called liberty.

But as men, for the attaining of peace and conservation of themselves thereby, have made an artificial man, which we call a commonwealth; so also have they made artificial chains, called *civil laws*, which they themselves, by mutual covenants, have fastened, at one end, to the lips of that man or assembly to whom they have given the sovereign power, and at the other end to their own ears. These bonds, in their own nature but weak, may nevertheless be made to hold, by the danger, though not by the difficulty, of breaking them.

In relation to these bonds only it is, that I am to speak now of the *liberty of subjects*. For seeing there is no commonwealth in the world wherein there be rules enough set down, for the regulating of all the actions and words of men; as being a thing impossible: it followeth necessarily that in all kinds of actions by the laws pretermitted, men have the liberty of doing what their own reasons shall suggest, for the most profitable to themselves. For if we take liberty in the proper sense for corporal liberty; that is to say, freedom from chains and prison; it were very absurd for men to clamor as they do, for the liberty they so manifestly enjoy. Again, if we take liberty for an exemption from laws, it is no less absurd for men to demand as they do, that liberty by which all other men may be masters of their lives. And yet, as absurd as it is, this is it they demand; not knowing that the laws are of no power to protect them, without a sword in the hands of a man, or men, to cause those laws to be put into execution. The liberty of a subject lieth therefore only in those things which in regulating their actions, the sovereign hath pretermitted: such as is the liberty to buy, and sell, and otherwise contract with one another; to choose their own abode, their own diet, their own trade of life, and institute their children as they themselves think fit; and the like.

Nevertheless we are not to understand that by such liberty, the sovereign power of life and death is either abolished or limited. For it has been already shown that nothing the sovereign representative can do to a subject, on what pre-

tense soever, can properly be called injustice, or injury; because every subject is author of every act the sovereign doth; so that he never wanteth right to anything, otherwise than as he himself is the subject of God, and bound thereby to observe the laws of nature. And therefore it may, and doth often happen in commonwealths, that a subject may be put to death, by the command of the sovereign power, and yet neither do the other wrong; as when Jephtha caused his daughter to be sacrificed: in which, and the like cases, he that so dieth, had liberty to do the action for which he is, nevertheless, without injury put to death. And the same holdeth also in a sovereign prince that putteth to death an innocent subject. For though the action be against the law of nature, as being contrary to equity, as was the killing of Uriah by David; yet it was not an injury to Uriah, but to God. Not to David, because the right to do what he pleased was given him by Uriah himself; and yet to God, because David was God's subject, and prohibited all iniquity by the law of nature: which distinction, David himself, when he repented the fact, evidently confirmed, saying, "To Thee only have I sinned." In the same manner, the people of Athens, when they banished the most potent of their commonwealth for ten years, though they committed no injustice; and yet they never questioned what crime he had done, but what hurt he would do: nay they commanded the banishment of they knew not whom; and every citizen bringing his oystershell into the market place, written with the name of him he desired should be banished, without actually accusing him, sometimes banished an Aristides, for his reputation of justice, and sometimes a scurrilous jester, as Hyperbolus, to make a jest of it. And yet a man cannot say the sovereign people of Athens wanted right to banish them, or an Athenian the liberty to jest, or to be just.

The liberty whereof there is so frequent and honorable mention in the histories and philosophy of the ancient Greeks and Romans, and in the writings and discourse of those that from them have received all their learning in the politics, is not the liberty of particular men, but the liberty of the

commonwealth; which is the same with that which every man then should have, if there were no civil laws nor commonwealth at all. And the effects of it also be the same. For as amongst masterless men, there is perpetual war of every man against his neighbor; no inheritance, to transmit to the son, nor to expect from the father; no propriety of goods or lands; no security; but a full and absolute liberty in every particular man: so in states, and commonwealths not dependent on one another, every commonwealth, not every man, has an absolute liberty, to do what it shall judge—that is to say, what that man, or assembly that representeth it, shall judge—most conducing to their benefit. But withal, they live in the condition of a perpetual war, and upon the confines of battle, with their frontiers armed, and cannons planted against their neighbors round about. The Athenians and Romans were free; that is, free commonwealths: not that any particular men had the liberty to resist their own representative, but that their representative had the liberty to resist or invade other people. There is written on the turrets of the city of Lucca in great characters at this day, the word *libertas*; yet no man can thence infer that a particular man has more liberty or immunity from the service of the commonwealth there than in Constantinople. Whether a commonwealth be monarchical or popular, the freedom is still the same.

But it is an easy thing for men to be deceived by the specious name of liberty; and, for want of judgment to distinguish, mistake that for their private inheritance and birth-right, which is the right of the public only. And when the same error is confirmed by the authority of men in reputation for their writings on this subject, it is no wonder if it produce sedition and change of government. In these western parts of the world, we are made to receive our opinions concerning the institution and rights of commonwealths from Aristotle, Cicero, and other men, Greeks and Romans, that living under popular states, derived those rights not from the principles of nature, but transcribed them into their books out of the practice of their own commonwealths, which were popular; as the grammarians describe the rules of language out of the

practice of the time, or the rules of poetry out of the poems of Homer and Virgil. And because the Athenians were taught, to keep them from desire of changing their government, that they were freemen, and all that lived under monarchy were slaves; therefore Aristotle puts it down in his *Politics* (Lib. vi, Cap. ii), "In democracy, liberty is to be supposed; for it is commonly held that no man is free in any other government." And as Aristotle, so Cicero and other writers have grounded their civil doctrine on the opinions of the Romans, who were taught to hate monarchy, at first, by them that having deposed their sovereign, shared amongst them the sovereignty of Rome; and afterwards by their successors. And by reading of these Greek and Latin authors, men from their childhood have gotten a habit, under a false show of liberty, of favoring tumults, and of licentious controlling the actions of their sovereigns, and again of controlling those controllers; with the effusion of so much blood, as I think I may truly say, there was never anything so dearly bought as these western parts have bought the learning of the Greek and Latin tongues.

To come now to the particulars of the true liberty of a subject—that is to say, what are the things which, though commanded by the sovereign, he may nevertheless without injustice refuse to do,—we are to consider, what rights we pass away when we make a commonwealth; or, which is all one, what liberty we deny ourselves by owning all the actions, without exception, of the man, or assembly, we make our sovereign. For in the act of our *submission* consisteth both our *obligation* and our *liberty*; which must therefore be inferred by arguments taken from thence: there being no obligation on any man which ariseth not from some act of his own; for all men equally are by nature free. And because such arguments must either be drawn from the express words, "I authorize all his actions," or from the intention of him that submitteth himself to his power, which intention is to be understood by the end for which he so submitteth; the obligation, and liberty of the subject, is to be derived either from those words or others equivalent, or else from the end of the institution of sovereignty, namely, the peace of

the subjects within themselves and their defense against a common enemy.

First therefore, seeing sovereignty by institution is by covenant of everyone to everyone; and sovereignty by acquisition, by covenants of the vanquished to the victor, or child to the parent; it is manifest that every subject has liberty in all those things, the right whereof cannot by covenant be transferred. I have shewn before, in the fourteenth chapter, that covenants not to defend a man's own body are void. Therefore:

If the sovereign command a man, though justly condemned, to kill, wound, or maim himself; or not to resist those that assault him; or to abstain from the use of food, air, medicine, or any other thing, without which he cannot live; yet hath that man the liberty to disobey.

If a man be interrogated by the sovereign, or his authority, concerning a crime done by himself, he is not bound, without assurance of pardon, to confess it; because no man, as I have shown in the same chapter, can be obliged by covenant to accuse himself.

Again, the consent of a subject to sovereign power is contained in these words, "I authorize, or take upon me, all his actions"; in which there is no restriction at all of his own former natural liberty: for by allowing him to kill me, I am not bound to kill myself when he commands me. It is one thing to say, "Kill me, or my fellow, if you please"; another thing to say, "I will kill myself, or my fellow." It followeth therefore, that:

No man is bound by the words themselves, either to kill himself or any other man; and consequently, that the obligation a man may sometimes have, upon the command of the sovereign to execute any dangerous or dishonorable office, dependeth not on the words of our submission, but on the intention, which is to be understood by the end thereof. When therefore our refusal to obey, frustrates the end for which the sovereignty was ordained, then there is no liberty to refuse; otherwise there is.

Upon this ground, a man that is commanded as a soldier to fight against the enemy, though his sovereign have right

enough to punish his refusal with death, may nevertheless in many cases refuse, without injustice; as when he substituteth a sufficient soldier in his place: for in this case he deserteth not the service of the commonwealth. And there is allowance to be made for natural timorousness; not only to women, of whom no such dangerous duty is expected, but also to men of feminine courage. When armies fight, there is on one side, or both, a running away; yet when they do it not out of treachery, but fear, they are not esteemed to do it unjustly, but dishonorably. For the same reason, to avoid battle is not injustice, but cowardice. But he that enrolleth himself a soldier, or taketh imprest money, taketh away the excuse of a timorous nature; and is obliged not only to go to the battle, but also not run from it, without his captain's leave. And when the defense of the commonwealth requireth at once the help of all that are able to bear arms, everyone is obliged; because otherwise the institution of the commonwealth, which they have not the purpose or courage to preserve, was in vain.

To resist the sword of the commonwealth in defense of another man, guilty or innocent, no man hath liberty; because such liberty takes away from the sovereign the means of protecting us, and is therefore destructive of the very essence of government. But in case a great many men together have already resisted the sovereign power unjustly, or committed some capital crime, for which every one of them expecteth death, whether have they not the liberty then to join together, and assist and defend one another? Certainly they have; for they but defend their lives, which the guilty man may as well do as the innocent. There was indeed injustice in the first breach of their duty; their bearing of arms subsequent to it, though it be to maintain what they have done, is no new unjust act. And if it be only to defend their persons, it is not unjust at all. But the offer of pardon taketh from them, to whom it is offered, the plea of self-defense, and maketh their perseverance in assisting, or defending the rest, unlawful.

As for other liberties, they depend on the silence of the law. In cases where the sovereign has prescribed no rule,

there the subject hath the liberty to do, or forbear, according to his own discretion. And therefore such liberty is in some places more, and in some less; and in some times more, in other times less, according as they that have the sovereignty shall think most convenient. As for example, there was a time when in England a man might enter into his own land, and dispossess such as wrongfully possessed it, by force. But in after times, that liberty of forcible entry was taken away, by a statute made, by the king, in parliament. And in some places of the world, men have the liberty of many wives; in other places such liberty is not allowed.

If a subject have a controversy with his sovereign, of debt, or of right of possession of lands or goods, or concerning any service required at his hands, or concerning any penalty, corporal, or pecuniary, grounded on a precedent law; he hath the same liberty to sue for his right as if it were against a subject, and before such judges as are appointed by the sovereign. For seeing the sovereign demandeth by force of a former law and not by virtue of his power, he declareth thereby, that he requireth no more than shall appear to be due by that law. The suit therefore is not contrary to the will of the sovereign; and consequently the subject hath the liberty to demand the hearing of his cause, and sentence, according to that law. But if he demand or take anything by pretense of his power, there lieth, in that case, no action of law; for all that is done by him in virtue of his power, is done by the authority of every subject, and consequently he that brings an action against the sovereign, brings it against himself.

If a monarch, or sovereign assembly, grant a liberty to all or any of his subjects, which grant standing, he is disabled to provide for their safety, the grant is void; unless he directly renounce, or transfer the sovereignty to another. For in that he might openly, if it had been his will, and in plain terms, have renounced or transferred it, and did not; it is to be understood it was not his will, but that the grant proceeded from ignorance of the repugnancy between such a liberty and the sovereign power; and therefore the sovereignty is still retained; and consequently all those powers,

which are necessary to the exercising thereof; such as are the power of war, and peace, of judicature, of appointing officers, and counsellors, of levying money, and the rest named in the eighteenth chapter.

The obligation of subjects to the sovereign, is understood to last as long, and no longer, than the power lasteth by which he is able to protect them. For the right men have by nature to protect themselves, when none else can protect them, can by no covenant be relinquished. The sovereignty is the soul of the commonwealth; which once departed from the body, the members do no more receive their motion from it. The end of obedience is protection; which, wheresoever a man seeth it, either in his own or in another's sword, nature applieth his obedience to it, and his endeavor to maintain it. And though sovereignty, in the intention of them that make it, be immortal; yet it is in its own nature, not only subject to violent death, by foreign war; but also through the ignorance, and passions of men, it hath in it, from the very institution, many seeds of a natural mortality, by intestine discord.

If a subject be taken prisoner in war, or his person or his means of life be within the guards of the enemy, and hath his life and corporal liberty given him on condition to be subject to the victor, he hath liberty to accept the condition; and having accepted it, is the subject of him that took him, because he had no other way to preserve himself. The case is the same, if he be detained on the same terms in a foreign country. But if a man be held in prison, or bonds, or is not trusted with the liberty of his body, he cannot be understood to be bound by covenant to subjection; and therefore may, if he can, make his escape by any means whatsoever.

If a monarch shall relinquish the sovereignty both for himself and his heirs, his subjects return to the absolute liberty of nature; because, though nature may declare who are his sons, and who are the nearest of his kin; yet it dependeth on his own will, as hath been said in the precedent chapter, who shall be his heir. If therefore he will have no heir, there is no sovereignty, nor subjection. The case is the same, if he die without known kindred, and without declaration of his

heir. For then there can no heir be known, and consequently no subjection be due.

If the sovereign banish his subject; during the banishment, he is not subject. But he that is sent on a message, or hath leave to travel, is still subject; but it is by contract between sovereigns, not by virtue of the covenant of subjection. For whosoever entereth into another's dominion, is subject to all the laws thereof; unless he have a privilege of the amity of the sovereigns, or by special license.

If a monarch subdued by war, render himself subject to the victor; his subjects are delivered from their former obligation, and become obliged to the victor. If he be held prisoner, or have not the liberty of his own body, he is not understood to have given away the right of sovereignty; and therefore his subjects are obliged to yield obedience to the magistrates formerly placed, governing not in their own name, but in his. For, his right remaining, the question is only of the administration; that is to say, of the magistrates and officers; which, if he have not means to name, he is supposed to approve those which he himself had formerly appointed. . . .¹

CHAPTER XXIX

Of Those Things That Weaken, or Tend to the Dissolution of a Commonwealth

Though nothing can be immortal, which mortals make; yet, if men had the use of reason they pretend to, their commonwealths might be secured, at least from perishing by internal diseases. For by the nature of their institution, they are designed to live, as long as mankind, or as the laws of nature,

¹ In Chapters XXII-XXVIII Hobbes discusses the various particular powers and functions of the sovereign.—*Editor*.

or as justice itself, which gives them life. Therefore when they come to be dissolved, not by external violence, but intestine disorder, the fault is not in men, as they are the *matter*; but as they are the *makers*, and orderers of them. For men, as they become at last weary of irregular jostling, and hewing one another, and desire with all their hearts, to conform themselves into one firm and lasting edifice; so for want, both of the art of making fit laws, to square their actions by, and also of humility, and patience, to suffer the rude and cumbersome points of their present greatness to be taken off, they cannot without the help of a very able architect, be compiled into any other than a crazy building, such as hardly lasting out their own time, must assuredly fall upon the heads of their posterity.

Amongst the *infirmities* therefore of a commonwealth, I will reckon in the first place, those that arise from an imperfect institution, and resemble the diseases of a natural body, which proceed from a defectuous procreation.

Of which, this is one, *that a man to obtain a kingdom, is sometimes content with less power, than to the peace, and defense of the commonwealth is necessarily required.* From whence it cometh to pass, that when the exercise of the power laid by, is for the public safety to be resumed, it hath the resemblance of an unjust act; which disposeth great numbers of men, when occasion is presented, to rebel; in the same manner as the bodies of children, gotten by diseased parents, are subject either to untimely death, or to purge the ill quality, derived from their vicious conception, by breaking out into oil and scabs. And when kings deny themselves some such necessary power, it is not always, though sometimes, out of ignorance of what is necessary to the office they undertake; but many times out of a hope to recover the same again at their pleasure. Wherein they reason not well; because such as will hold them to their promises, shall be maintained against them by foreign commonwealths; who in order to the good of their own subjects let slip few occasions to *weaken* the estate of their neighbors. So was Thomas Becket, archbishop of Canterbury, supported against Henry the Second, by the

Pope; the subjection of ecclesiastics to the commonwealth, having been dispensed with by William the Conqueror at his reception, when he took an oath, not to infringe the liberty of the Church. And so were the barons, whose power was by William Rufus, to have their help in transferring the succession from his elder brother to himself, increased to a degree inconsistent with the sovereign power, maintained in their rebellion against King John, by the French.

Nor does this happen in monarchy only. For whereas the style of the ancient Roman commonwealth, was, *the senate and people of Rome*; neither senate, nor people pretended to the whole power; which first caused the seditions, of Tiberius Gracchus, Caius Gracchus, Lucius Saturninus, and others; and afterwards the wars between the senate and the people, under Marius and Sylla; and again under Pompey and Caesar, to the extinction of their democracy, and the setting up of monarchy.

The people of Athens bound themselves but from one only action; which was, that no man on pain of death should propound the renewing of the war for the island of Salamis; and yet thereby, if Solon had not caused to be given out he was mad, and afterwards in gesture and habit of a madman, and in verse, propounded it to the people that flocked about him, they had had an enemy perpetually in readiness, even at the gates of their city; such damage, or shifts, are all commonwealths forced to, that have their power never so little limited.

In the second place, I observe the *diseases* of a commonwealth, that proceed from the poison of seditious doctrines, whereof one is, *that every private man is judge of good and evil actions*. This is true in the condition of mere nature, where there are no civil laws; and also under civil government, in such cases as are not determined by the law. But otherwise, it is manifest, that the measure of good and evil actions, is the civil law; and the judge the legislator, who is always representative of the commonwealth. From this false doctrine, men are disposed to debate with themselves, and dispute the commands of the commonwealth; and afterwards

to obey, or disobey them, as in their private judgments they shall think fit; whereby the commonwealth is distracted and *weakened*.

Another doctrine repugnant to civil society, is, that *whatsoever a man does against his conscience, is sin*; and it dependeth on the presumption of making himself judge of good and evil. For a man's conscience, and his judgment is the same thing, and as the judgment, so also the conscience may be erroneous. Therefore, though he that is subject to no civil law, sinneth in all he does against his conscience, because he has no other rule to follow but his own reason; yet it is not so with him that lives in a commonwealth; because the law is the public conscience, by which he hath already undertaken to be guided. Otherwise, in such diversity, as there is of private consciences, which are but private opinions, the commonwealth must needs be distracted, and no man dare to obey the sovereign power, further than it shall seem good in his own eyes.

It hath been also commonly taught, *that faith and sanctity, are not to be attained by study and reason, but by supernatural inspiration, or infusion*. Which granted, I see not why any man should render a reason of his faith; or why every Christian should not be also a prophet; or why any man should take the law of his country, rather than his own inspiration, for the rule of his action. And thus we fall again in the fault of taking upon us to judge of good and evil; or to make judges of it, such private men as pretend to be supernaturally inspired, to the dissolution of all civil government. Faith comes by hearing, and hearing by those accidents, which guide us into the presence of them that speak to us; which accidents are all contrived by God Almighty; and yet are not supernatural, but only, for the great number of them that concur to every effect, unobservable. Faith and sanctity, are indeed not very frequent; but yet they are not miracles, but brought to pass by education, discipline, correction, and other natural ways, by which God worketh them in his elect, at such times as he thinketh fit. And these three opinions, pernicious to peace and government, have in this

part of the world, proceeded chiefly from the tongues, and pens of unlearned divines, who joining the words of Holy Scripture together, otherwise than is agreeable to reason, do what they can, to make men think, that sanctity and natural reason, cannot stand together.

A fourth opinion, repugnant to the nature of a commonwealth, is this *that he that hath the sovereign power is subject to the civil laws*. It is true, that sovereigns are all subject to the laws of nature; because such laws be divine, and cannot by any man, or commonwealth be abrogated. But to those laws which the sovereign himself, that is, which the commonwealth maketh, he is not subject. For to be subject to laws, is to be subject to the commonwealth, that is to the sovereign representative, that is to himself; which is not subjection, but freedom from the laws. Which error, because it setteth the laws above the sovereign, setteth also a judge above him, and a power to punish him; which is to make a new sovereign; and again for the same reason a third, to punish the second; and so continually without end, to the confusion, and dissolution of the commonwealth.

A fifth doctrine that tendeth to the dissolution of a commonwealth, is, *that every private man has an absolute propriety in his goods; such, as excludeth the right of the sovereign*. Every man has indeed a propriety that excludes the right of every other subject; and he has it only from the sovereign power; without the protection whereof, every other man should have equal right to the same. But if the right of the sovereign also be excluded, he cannot perform the office they have put him into; which is, to defend them both from foreign enemies, and from the injuries of one another; and consequently there is no longer a commonwealth.

And if the propriety of subjects, exclude not the right of the sovereign representative to their goods; much less do their offices of judicature, or execution, in which they represent the sovereign himself.

There is a sixth doctrine, plainly, and directly against the essence of a commonwealth; and it is this, *that the sovereign power may be divided*. For what is it to divide the power of

a commonwealth, but to dissolve it; for powers divided mutually destroy each other. And for these doctrines, men are chiefly beholding to some of those that, making profession of the laws, endeavor to make them depend upon their own learning, and not upon the legislative power.

And as false doctrine, so also oftentimes the example of different government in a neighboring nation, disposeth men to alteration of the form already settled. So the people of the Jews were stirred up to reject God, and to call upon the prophet Samuel, for a king after the manner of the nations: so also the lesser cities of Greece, were continually disturbed, with seditions of the aristocratical, and democratical factions; one part of almost every commonwealth, desiring to imitate the Lacedemonians; the other, the Athenians. And I doubt not, but many men have been contented to see the late troubles in England, out of an imitation of the Low Countries; supposing they needed no more to grow rich, than to change, as they had done, the form of their government. For the constitution of man's nature, is of itself subject to desire novelty. When therefore they are provoked to the same, by the neighborhood also of those that have been enriched by it, it is almost impossible for them, not to be content with those that solicit them to change; and love the first beginnings, though they be grieved with the continuance of disorder; like hot-bloods, that having gotten the itch, tear themselves with their own nails, till they can endure the smart no longer.

And as to rebellion in particular against monarchy; one of the most frequent causes of it, is the reading of the books of policy, and histories of the ancient Greeks, and Romans; from which, young men, and all others that are unprovided of the antidote of solid reason, receiving a strong, and delightful impression, of the great exploits of war, achieved by the conductors of their armies, receive withal a pleasing idea, of all they have done besides; and imagine their great prosperity, not to have proceeded from the emulation of particular men, but from the virtue of their popular form of government: not considering the frequent seditions, and civil wars, produced by the imperfection of their policy. From the reading, I say,

of such books, men have undertaken to kill their kings, because the Greek and Latin writers, in their books, and discourses of policy, make it lawful, and laudable, for any man so to do; provided, before he do it, he call him tyrant. For they say not *regicide*, that is, killing a king, but *tyrannicide*, that is, killing of a tyrant is lawful. From the same books, they that live under a monarch conceive an opinion, that the subjects in a popular commonwealth enjoy liberty; but that in a monarchy they are all slaves. I say, they that live under a monarchy conceive such an opinion; not they that live under a popular government: for they find no such matter. In sum, I cannot imagine, how anything can be more prejudicial to a monarchy, than the allowing of such books to be publicly read, without present applying such correctives of discreet masters, as are fit to take away their venom: which venom I will not doubt to compare to the biting of a mad dog, which is a disease the physicians call *hydrophobia*, or *fear of water*. For as he that is so bitten, has a continual torment of thirst, and yet abhorreth water; and is in such an estate, as if the poison endeavored to convert him into a dog; so when a monarchy is once bitten to the quick, by those democratical writers, that continually snarl at that estate; it wanteth nothing more than a strong monarch, which nevertheless out of a certain *tyrannophobia*, or fear of being strongly governed, when they have him, they abhor.

As there have been doctors, that hold there be three souls in a man; so there be also that think there may be more souls, that is, more sovereigns, than one, in a commonwealth; and set up a *supremacy* against the *sovereignty*; *canons* against *laws*; and a *ghostly authority* against the civil; working on men's minds, with words and distinctions, that of themselves signify nothing, but betray by their obscurity; that there walketh, as some think, invisibly another kingdom, as it were a kingdom of fairies, in the dark. Now seeing it is manifest, that the civil power, and the power of the commonwealth is the same thing; and that supremacy, and the power of making canons, and granting faculties, implieth a commonwealth; it followeth, that where one is sovereign, another supreme;

where one can make laws, and another make canons; there must needs be two commonwealths, of one and the same subjects; which is a kingdom divided in itself, and cannot stand. For notwithstanding the insignificant distinction of *temporal* and *ghostly*, they are still two kingdoms, and every subject is subject to two masters. For seeing the *ghostly* power challengeth the right to declare what is sin, it challengeth by consequence to declare what is law, sin being nothing but the transgression of the law; and again, the civil power challenging to declare what is law, every subject must obey two masters, who both will have their commands be observed as law; which is impossible. Or, if it be but one kingdom, either the *civil*, which is the power of the commonwealth, must be subordinate to the *ghostly*, and then there is no sovereignty but the *ghostly*; or the *ghostly* must be subordinate to the *temporal*, and then there is no *supremacy* but the *temporal*. When therefore these two powers oppose one another, the commonwealth cannot but be in great danger of civil war and dissolution. For the civil authority being more visible, and standing in the clearer light of natural reason, cannot choose but draw to it in all times a very considerable part of the people; and the *spiritual*, though it stand in the darkness of School distinctions, and hard words, yet because the fear of darkness and ghosts, is greater than other fears, cannot want a party sufficient to trouble, and sometimes to destroy a commonwealth. And this is a disease which not unfitly may be compared to the epilepsy, or falling sickness, which the Jews took to be one kind of possession by spirits, in the body natural. For as in this disease, there is an unnatural spirit, or wind in the head that obstructeth the roots of the nerves, and moving them violently, taketh away the motion which naturally they should have from the power of the soul in the brain, and thereby causeth violent, and irregular motions, which men call convulsions, in the parts; insomuch as he that is seized therewith, falleth down sometimes into the water, and sometimes into the fire, as a man deprived of his senses; so also in the body politic, when the spiritual power, moveth the members of a commonwealth, by the terror of punish-

ments, and hope of rewards, which are the nerves of it, otherwise than by the civil power, which is the soul of the commonwealth, they ought to be moved; and by strange, and hard words suffocates their understanding, it must needs thereby distract the people, and either overwhelm the commonwealth with oppression, or cast it into the fire of a civil war.

Sometimes also in the merely civil government, there be more than one soul; as when the power of levying money, which is the nutritive faculty, has depended on a general assembly; the power of conduct and command, which is the motive faculty, on one man; and the power of making laws, which is the rational faculty, on the accidental consent, not only of those two, but also of a third; this endangereth the commonwealth, sometimes for want of consent to good laws: but most often for want of such nourishment, as is necessary to life, and motion. For although few perceive, that such government, is not government, but division of the commonwealth into three factions, and call it mixed monarchy; yet the truth is, that it is not one independent commonwealth, but three independent factions; nor one representative person, but three. In the kingdom of God, there may be three persons independent without breach of unity in God that reigneth; but where men reign, that be subject to diversity of opinions, it cannot be so. And therefore if the king bear the person of the people, and the general assembly bear also the person of the people, and another assembly bear the person of a part of the people, they are not one person, nor one sovereign, but three persons, and three sovereigns.

To what disease in the natural body of man, I may exactly compare this irregularity of a commonwealth, I know not. But I have seen a man, that had another man growing out of his side, with a head, arms, breast, and stomach, of his own: if he had had another man growing out of his other side, the comparison might then have been exact.

Hitherto I have named such diseases of a commonwealth, as are of the greatest, and most present danger. There be others not so great; which nevertheless are not unfit to be observed.

As first, the difficulty of raising money, for the necessary uses of the commonwealth; especially in the approach of war. This difficulty ariseth from the opinion, that every subject hath a propriety in his lands and goods, exclusive of the sovereign's right to the use of the same. From whence it cometh to pass, that the sovereign power, which foreseeeth the necessities and dangers of the commonwealth, finding the passage of money to the public treasury obstructed, by the tenacity of the people, whereas it ought to extend itself, to encounter, and prevent such dangers in their beginnings, contracteth itself as long as it can, and when it cannot longer, struggles with the people by stratagems of law, to obtain little sums, which not sufficing, he is fain at last violently to open the way for present supply, or perish; and being put often to these extremities, at last reduceth the people to their due temper; or else the commonwealth must perish. Insomuch as we may compare this distemper very aptly to an ague; wherein, the fleshy parts being congealed, or by venomous matter obstructed, the veins which by their natural course empty themselves into the heart, are not, as they ought to be, supplied from the arteries, whereby there succeedeth at first a cold contraction, and trembling of the limbs; and afterward a hot, and strong endeavor of the heart, to force a passage for the blood; and before it can do that, contenteth itself with the small refreshments of such things as cool for a time, till, if nature be strong enough, it break at last the contumacy of the parts obstructed, and dissipateth the venom into sweat; or, if nature be too weak, the patient dieth.

Again, there is sometimes in a commonwealth, a disease, which resembleth the pleurisy; and that is, when the treasure of the commonwealth, flowing out of its due course, is gathered together in too much abundance, in one, or a few private men, by monopolies, or by farms of the public revenues; in the same manner as the blood in a pleurisy, getting into the membrane of the breast, breedeth there an inflammation, accompanied with a fever, and painful stitches.

Also, the popularity of a potent subject, unless the commonwealth have very good caution of his fidelity, is a danger-

ous disease; because the people, which should receive their motion from the authority of the sovereign, by the flattery and by the reputation of an ambitious man are drawn away from their obedience to the laws, to follow a man, of whose virtues, and designs they have no knowledge. And this is commonly of more danger in a popular government, than in a monarchy; because an army is of so great force, and multitude, as it may easily be made believe, they are the people. By this means it was, that Julius Caesar, who was set up by the people against the senate, having won to himself the affections of his army, made himself master both of senate and people. And this proceeding of popular, and ambitious men, is plain rebellion; and may be resembled to the effects of witchcraft.

Another infirmity of a commonwealth, is the immoderate greatness of a town, when it is able to furnish out of its own circuit, the number, and expense of a great army: as also the great number of corporations; which are as it were many lesser commonwealths in the bowels of a greater, like worms in the entrails of a natural man. To which may be added, the liberty of disputing against absolute power, by pretenders to political prudence; which though bred for the most part in the lees of the people, yet animated by false doctrines, are perpetually meddling with the fundamental laws, to the molestation of the commonwealth; like the little worms, which physicians call *ascarides*.

We may further add, the insatiable appetite, or *βουλμία*, of enlarging dominion; with the incurable wounds thereby many times received from the enemy, and the *wens*, of ununited conquests, which are many times a burden, and with less danger lost, than kept; as also the *lethargy* of ease, and *consumption* of riot and vain expense.

Lastly, when in a war, foreign or intestine, the enemies get a final victory; so as, the forces of the commonwealth keeping the field no longer, there is no further protection of subjects in their loyalty; then is the commonwealth *dissolved*, and every man at liberty to protect himself by such courses as his own discretion shall suggest unto him. For the sovereign

is the public soul, giving life and motion to the commonwealth; which expiring, the members are governed by it no more, than the carcass of a man, by his departed, though immortal, soul. For though the right of a sovereign monarch cannot be extinguished by the act of another; yet the obligation of the members may. For he that wants protection, may seek it anywhere; and when he hath it, is obliged, without fraudulent pretense of having submitted himself out of fear, to protect his protection as long as he is able. But when the power of an assembly is once suppressed, the right of the same perisheth utterly; because the assembly itself is extinct; and consequently, there is no possibility for the sovereignty to re-enter. . . .

John Locke

AN ESSAY CONCERNING THE
TRUE ORIGINAL, EXTENT
AND END OF CIVIL
GOVERNMENT

John Locke

[1632-1704]

Like his predecessor Hobbes, John Locke had no great love for the scholastic life at Oxford. He, too, was first attracted to science and came strongly under the influence of Descartes. After four years in France, he returned to England, but had to flee to Holland, then the haven for political exiles. There he prepared the material which was incorporated upon his return to England into *Two Treatises on Civil Government*, the second of which is included in this volume in its entirety. In 1690 he issued his famous *Essay Concerning Human Understanding* and his name became world known. First advocate of the modern conception of civil liberties and definer of the limitations of property and the powers of the commonwealth—the people sovereign in the right to govern themselves—John Locke in his essay *On Civil Government* became the formulator of constitutional law and the democratic processes as we know them.

AN ESSAY CONCERNING THE TRUE ORIGINAL, EXTENT AND END OF CIVIL GOVERNMENT

JOHN LOCKE

CHAPTER I

The Introduction

1 ¶ It having been shown in the foregoing discourse:

i That Adam had not, either by natural right of fatherhood or by positive donation from God, any such authority over his children, nor dominion over the world, as is pretended.

ii That if he had, his heirs yet had no right to it.

iii That if his heirs had, there being no law of nature nor positive law of God that determines which is the right heir in all cases that may arise, the right of succession, and consequently of bearing rule, could not have been certainly determined.

iv That if even that had been determined, yet the knowledge of which is the eldest line of Adam's posterity, being so long since utterly lost, that in the races of mankind and families of the world there remains not to one above another the

least pretense to be the eldest house, and to have the right of inheritance.

All these premises having, as I think, been clearly made out, it is impossible that the rulers now on earth should make any benefit, or derive any the least shadow of authority from that which is held to be the foundation of all power, Adam's private dominion and paternal jurisdiction; so that he that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beasts, where the strongest carries it, and so lay a foundation for perpetual disorder and mischief, tumult, sedition, and rebellion (things that the followers of that hypothesis so loudly cry out against), must of necessity find out another rise of government, another original of political power, and another way of designing and knowing the persons that have it, than what Sir Robert Filmer hath taught us.

2 ¶ To this purpose, I think it may not be amiss to set down what I take to be political power; that the power of a magistrate over a subject may be distinguished from that of a father over his children, a master over his servant, a husband over his wife, and a lord over his slave. All which distinct powers happening sometime together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from another, and show the difference betwixt a ruler of a commonwealth, a father of a family, and a captain of a galley.

3 ¶ Political power, then, I take to be a right of making laws with penalties of death, and consequently all less penalties, for the regulating and preserving of property, and of employing the force of the community in the execution of such laws, and in the defense of the commonwealth from foreign injury, and all this only for the public good.

CHAPTER II

Of the State of Nature

4 ¶ To understand political power aright, and derive it from its original, we must consider what state all men are naturally in, and that is a state of perfect freedom to order their actions and dispose of their possessions and persons as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection, unless the Lord and Master of them all should by any manifest declaration of His will set one above another, and confer on him by an evident and clear appointment an undoubted right to dominion and sovereignty.

5 ¶ This equality of men by nature the judicious Hooker looks upon as so evident in itself and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men on which he builds the duties they owe one another, and from whence he derives the great maxims of justice and charity. His words are:—

“The like natural inducement hath brought men to know that it is no less their duty to love others than themselves; for seeing those things which are equal must needs all have one measure, if I cannot but wish to receive good, even as much at every man’s hands as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men weak, being of one and the same

nature? To have anything offered them repugnant to this desire, must needs in all respects grieve them as much as me, so that, if I do harm, I must look to suffer, there being no reason that others should show greater measures of love to me than they have by me showed unto them. My desire, therefore, to be loved of my equals in nature as much as possible may be, imposeth upon me a natural duty of bearing to themward fully the like affection; from which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn for direction of life no man is ignorant."—(Eccl. Pol., lib. i).

6 ¶ But though this be a state of liberty, yet it is not a state of license; though man in that state have an uncontrollable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The state of nature has a law of nature to govern it, which obliges everyone; and reason, which is that law, teaches all mankind who will but consult it, that, being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions. For men being all the workmanship of one omnipotent and infinitely wise Maker—all the servants of one sovereign Master, sent into the world by His order, and about His business—they are His property, whose workmanship they are, made to last during His, not one another's pleasure; and being furnished with like faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for ours. Everyone, as he is bound to preserve himself, and not to quit his station willfully, so, by the like reason, when his own preservation comes not in competition, ought he, as much as he can, to preserve the rest of mankind, and not, unless it be to do justice on an offender, take away or impair the life, or

what tends to the preservation of the life, the liberty, health, limb, or goods of another.

7 ¶ And that all men may be restrained from invading others' rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and preservation of all mankind, the execution of the law of nature is in that state put into every man's hand, whereby everyone has a right to punish the transgressors of that law to such a degree as may hinder its violation. For the law of nature would, as all other laws that concern men in this world, be in vain if there were nobody that, in the state of nature, had a power to execute that law, and thereby preserve the innocent and restrain offenders. And if anyone in the state of nature may punish another for any evil he has done, everyone may do so. For in that state of perfect equality, where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, everyone must needs have a right to do.

8 ¶ And thus in the state of nature one man comes by a power over another; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats or boundless extravagance of his own will; but only to retribute to him so far as calm reason and conscience dictate what is proportionate to his transgression, which is so much as may serve for reparation and restraint. For these two are the only reasons why one man may lawfully do harm to another, which is that we call punishment. In transgressing the law of nature, the offender declares himself to live by another rule than that of common reason and equity, which is that measure God has set to the actions of men, for their mutual security; and so he becomes dangerous to mankind, the tie which is to secure them from

injury and violence being slighted and broken by him. Which, being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature, every man upon this score, by the right he hath to preserve mankind in general, may restrain, or, where it is necessary, destroy things noxious to them, and so may bring such evil on anyone who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and by his example others, from doing the like mischief. And in this case, and upon this ground, every man hath a right to punish the offender, and be executioner of the law of nature.

9 ¶ I doubt not but this will seem a very strange doctrine to some men: but before they condemn it, I desire them to resolve me by what right any prince or state can put to death or punish an alien, for any crime he commits in their country. 'Tis certain their laws, by virtue of any sanction they receive from the promulgated will of the legislative, reach not a stranger: they speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that commonwealth, hath no power over him. Those who have the supreme power of making laws in England, France, or Holland, are to an Indian but like the rest of the world—men without authority. And, therefore, if by the law of nature every man hath not a power to punish offenses against it, as he soberly judges the case to require, I see not how the magistrates of any community can punish an alien of another country; since in reference to him they can have no more power than what every man naturally may have over another.

10 ¶ Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature, and to be a noxious creature, there is

commonly injury done, and some person or other, some other man receives damage by his transgression, in which case he who hath received any damage, has, besides the right of punishment common to him with other men, a particular right to seek reparation from him that has done it. And any other person who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

11 ¶ From these two distinct rights—the one of punishing the crime, for restraint and preventing the like offense, which right of punishing is in everybody; the other of taking reparation, which belongs only to the injured party—comes it to pass that the magistrate, who by being magistrate hath the common right of punishing put into his hands, can often, where the public good demands not the execution of the law, remit the punishment of criminal offenses by his own authority, but yet cannot remit the satisfaction due to any private man for the damage he has received. That he who has suffered the damage has a right to demand in his own name, and he alone can remit. The damnified person has this power of appropriating to himself the goods or service of the offender, by right of self-preservation, as every man has a power to punish the crime, to prevent its being committed again, by the right he has of preserving all mankind, and doing all reasonable things he can in order to that end. And thus it is that every man in the state of nature has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from everybody, and also to secure men from the attempts of a criminal who having renounced reason, the common rule and measure God hath given to mankind, hath by the unjust violence and slaughter he hath committed upon one, declared war against all mankind, and therefore may be destroyed as a lion or a tiger, one of those wild savage beasts with whom men can have no society nor

security. And upon this is grounded that great law of nature. "Whoso sheddeth man's blood, by man shall his blood be shed." And Cain was so fully convinced that everyone had a right to destroy such a criminal, that after the murder of his brother he cries out, "Every one that findeth me shall slay me;" so plain was it writ in the hearts of mankind.

12 ¶ By the same reason may a man in the state of nature punish the lesser breaches of that law. It will perhaps be demanded, With death? I answer, each transgression may be punished to that degree, and with so much severity, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offense that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a commonwealth. For though it would be beside my present purpose to enter here into the particulars of the law of nature, or its measures of punishment, yet it is certain there is such a law, and that, too, as intelligible and plain to a rational creature and a studier of that law as the positive laws of commonwealths; nay, possibly plainer, as much as reason is easier to be understood than the fancies and intricate contrivances of men, following contrary and hidden interests put into words; for truly so are a great part of the municipal laws of countries, which are only so far right as they are founded on the law of nature, by which they are to be regulated and interpreted.

13 ¶ To this strange doctrine—viz., that in the state of nature everyone has the executive power of the law of nature—I doubt not but it will be objected that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends. And on the other side, that ill-nature, passion, and revenge will carry them too far in punishing others; and hence nothing but con-

fusion and disorder will follow; and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant that civil government is the proper remedy for the inconveniences of the state of nature, which must certainly be great where men may be judges in their own case, since 'tis easy to be imagined that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it. But I shall desire those who make this objection, to remember that absolute monarchs are but men, and if government is to be the remedy of those evils which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least question or control of those who execute his pleasure; and in whatsoever he doth, whether led by reason, mistake, or passion, must be submitted to, which men in the state of nature are not bound to do one to another? And if he that judges, judges amiss in his own or any other case, he is answerable for it to the rest of mankind.

14 ¶ 'Tis often asked as a mighty objection, Where are, or ever were there, any men in such a state of nature? To which it may suffice as an answer at present: That since all princes and rulers of independent governments all through the world are in a state of nature, 'tis plain the world never was, nor ever will be, without numbers of men in that state. I have named all governors of independent communities, whether they are or are not in league with others. For 'tis not every compact that puts an end to the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises and compacts men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, etc., between the two men in Soldania, in or between a Swiss

and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature in reference to one another. For truth and keeping of faith belong to men as men, and not as members of society.

15 ¶ To those that say there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker—(Eccl. Pol., lib. i., sect. 10), where he says, "The laws which have been hitherto mentioned," i.e., the laws of nature, "do bind men absolutely, even as they are men, although they have never any settled fellowship, and never any solemn agreement amongst themselves what to do or not to do; but forasmuch as we are not by ourselves sufficient to furnish ourselves with competent store of things needful for such a life as our nature doth desire—a life fit for the dignity of man—therefore to supply those defects and imperfections which are in us, as living single and solely by ourselves, we are naturally induced to seek communion and fellowship with others; this was the cause of men's uniting themselves at first in politic societies"—but I moreover affirm that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not, in the sequel of this discourse, to make it very clear.

CHAPTER III

Of the State of War

16 ¶ The State of war is a state of enmity and destruction; and therefore declaring by word or action, not a passionate and hasty, but a sedate, settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the

other's power to be taken away by him, or anyone that joins with him in his defense and espouses his quarrel; it being reasonable and just I should have a right to destroy that which threatens me with destruction. For by the fundamental law of nature, man being to be preserved as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred; and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion; because they are not under the ties of the common law of reason, have no other rule but that of force and violence, and so may be treated as a beast of prey, those dangerous and noxious creatures that will be sure to destroy him whenever he falls into their power.

17 ¶ And hence it is that he who attempts to get another man into his absolute power does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life. For I have reason to conclude that he who would get me into his power without my consent, would use me as he pleased when he had got me there, and destroy me too, when he had a fancy to it; for nobody can desire to have me in his absolute power, unless it be to compel me by force to that which is against the right of my freedom, *i.e.*, make me a slave. To be free from such force is the only security of my preservation; and reason bids me look on him as an enemy to my preservation who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me, thereby puts himself into a state of war with me. He that in the state of nature would take away the freedom that belongs to any one in that state, must necessarily be supposed to have a design to take away everything else, that freedom being the foundation of all the rest; as he that in the state of society would take away the freedom belonging to those of that society or commonwealth, must be supposed to design to take away from them everything else, and so be looked on as in a state of war.

18 ¶ This makes it lawful for a man to kill a thief who has not in the least hurt him, nor declared any design upon his life, any farther than by the use of force, so to get him in his power as to take away his money, or what he pleases, from him; because using force, where he has no right to get me into his power, let his pretense be what it will, I have no reason to suppose that he who would take away my liberty would not, when he had me in his power, take away everything else. And, therefore, it is lawful for me to treat him as one who has put himself into a state of war with me—i.e., kill him if I can; for to that hazard does he justly expose himself whoever introduces a state of war, and is aggressor in it.

19 ¶ And here we have the plain difference between the state of nature and the state of war, which however some men have confounded, are as far distant as a state of peace, good-will, mutual assistance and preservation, and a state of enmity, malice, violence and mutual destruction, are one from another. Men living together according to reason, without a common superior on earth with authority to judge between them, is properly the state of nature. But force, or a declared design of force, upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war; and 'tis the want of such an appeal gives a man the right of war even against an aggressor, though he be in society and a fellow-subject. Thus a thief, whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill, when he sets on to rob me but of my horse or coat; because the law, which was made for my preservation where it cannot interpose to secure my life from present force, which if lost is capable of no reparation, permits me my own defense, and the right of war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. Want of a common judge with authority puts all men in a state of nature; force without right, upon a man's person, makes a state of war, both where is, and is not, a common judge.

20 ¶ But when the actual force is over, the state of war ceases between those that are in society, and are equally on both sides subject to the judge.

21 ¶ And, therefore, in such controversies, where the question is put, Who shall be judge? it cannot be meant, Who shall decide the controversy? Everyone knows what Jephtha here tells us, that the "Lord the Judge" shall judge. Where there is no judge on earth, the appeal lies to God in Heaven. That question, then, cannot mean, Who shall judge whether another hath put himself in a state of war with me, and whether I may, as Jephtha did, appeal to Heaven in it? Of that I myself can only be judge in my own conscience, as I will answer it at the great day, to the supreme Judge of all men.

CHAPTER IV

Of Slavery

22 ¶ The natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The liberty of man in society is to be under no other legislative power but that established by consent in the commonwealth; nor under the dominion of any will or restraint of any law, but what that legislative shall enact according to the trust put in it. Freedom then is not what Sir Robert Filmer tells us, (O. A. 55)¹ "a liberty for everyone to do what he lists, to live as he pleases, and not to be tied by any laws." But freedom of men under government is to

¹ The reference is to Filmer's *Observations upon Aristotle's Politics, Touching Forms of Government*, published in 1679.—Editor.

have a standing rule to live by, common to everyone of that society, and made by the legislative power erected in it; a liberty to follow my own will in all things, where that rule prescribes not; and not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man: as freedom of nature is to be under no other restraint but the law of nature.

23 ¶ This freedom from absolute arbitrary power is so necessary to, and closely joined with, a man's preservation, that he cannot part with it but by what forfeits his preservation and life together. For a man not having the power of his own life cannot by compact, or his own consent, enslave himself to anyone, nor put himself under the absolute arbitrary power of another to take away his life when he pleases. Nobody can give more power than he has himself; and he that cannot take away his own life, cannot give another power over it. Indeed, having by his fault forfeited his own life by some act that deserves death, he to whom he has forfeited it may (when he has him in his power) delay to take it, and make use of him to his own service; and he does him no injury by it. For whenever he finds the hardship of his slavery outweigh the value of his life, 'tis in his power by resisting the will of his master to draw on himself the death he desires.

24 ¶ This is the perfect condition of slavery, which is nothing else but the state of war continued between a lawful conqueror and a captive, for if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and slavery ceases as long as the compact endures; for, as has been said, no man can by agreement pass over to another that which he hath not in himself—a power over his own life.

I confess, we find among the Jews, as well as other nations, that men did sell themselves; but it is plain this was only to drudgery, not to slavery; for it is evident the person sold was

not under an absolute, arbitrary, despotical power, for the master could not have power to kill him at any time, whom at a certain time he was obliged to let go free out of his service; and the master of such a servant was so far from having an arbitrary power over his life that he could not at pleasure so much as maim him, but the loss of an eye or tooth set him free (Exod. xxi.).

CHAPTER V

Of Property

25 ¶ Whether we consider natural reason, which tells us that men being once born have a right to their preservation, and consequently to meat and drink and such other things as nature affords for their subsistence; or revelation, which gives us an account of those grants God made of the world to Adam, and to Noah and his sons, 'tis very clear that God, as King David says, Psalm cxv. 16, "has given the earth to the children of men," given it to mankind in common. But this being supposed, it seems to some a very great difficulty how anyone should ever come to have a property in anything. I will not content myself to answer that if it be difficult to make out property upon a supposition that God gave the world to Adam and his posterity in common, it is impossible that any man but one universal monarch should have any property upon a supposition that God gave the world to Adam and his heirs in succession, exclusive of all the rest of his posterity. But I shall endeavor to show how men might come to have a property in several parts of that which God gave to mankind in common, and that without any express compact of all the commoners.

26 ¶ God, who hath given the world to men in common, hath also given them reason to make use of it to the best ad-

vantage of life and convenience. The earth and all that is therein is given to men for the support and comfort of their being. And though all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature; and nobody has originally a private dominion exclusive of the rest of mankind in any of them as they are thus in their natural state; yet being given for the use of men, there must of necessity be a means to appropriate them some way or other before they can be of any use or at all beneficial to any particular man. The fruit or venison which nourishes the wild Indian, who knows no enclosure, and is still a tenant in common, must be his, and so his, i.e., a part of him, that another can no longer have any right to it, before it can do any good for the support of his life.

27 ¶ Though the earth and all inferior creatures be common to all men, yet every man has a property in his own person; this nobody has any right to but himself. The labor of his body and the work of his hands we may say are properly his. Whatsoever, then, he removes out of the state that nature hath provided and left it in, he hath mixed his labor with, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature placed it in, it hath by this labor something annexed to it that excludes the common right of other men. For this labor being the unquestionable property of the laborer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good left in common for others.

28 ¶ He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. Nobody can deny but the nourishment is his. I ask, then, When did they begin to be his—when he digested, or when he ate, or when he

boiled, or when he brought them home, or when he picked them up? And 'tis plain if the first gathering made them not his, nothing else could. That labor put a distinction between them and common; that added something to them more than nature, the common mother of all, had done, and so they became his private right. And will anyone say he had no right to those acorns or apples he thus appropriated, because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons which remain so by compact that 'tis the taking any part of what is common and removing it out of the state nature leaves it in, which begins the property; without which the common is of no use. And the taking of this or that part does not depend on the express consent of all the commoners. Thus the grass my horse has bit, the turfs my servant has cut, and the ore I have dug in any place where I have a right to them in common with others, become my property without the assignation or consent of anybody. The labor that was mine removing them out of that common state they were in, hath fixed my property in them.

29 ¶ By making an explicit consent of every commoner necessary to anyone's appropriating to himself any part of what is given in common. Children or servants could not cut the meat which their father or master had provided for them in common without assigning to everyone his peculiar part. Though the water running in the fountain be everyone's, yet who can doubt but that in the pitcher is his only who drew it out? His labor hath taken it out of the hands of Nature where it was common, and belonged equally to all her children, and hath thereby appropriated it to himself.

30 ¶ Thus this law of reason makes the deer that Indian's who hath killed it; it is allowed to be his goods who hath be-

stowed his labor upon it, though, before, it was the common right of everyone. And amongst those who are counted the civilized part of mankind, who have made and multiplied positive laws to determine property, this original law of nature for the beginning of property, in what was before common, still takes place, and by virtue thereof, what fish anyone catches in the ocean, that great and still remaining common of mankind; or what ambergris anyone takes up here is by the labor that removes it out of that common state nature left it in, made his property who takes that pains about it. And even amongst us, the hare that anyone is hunting is thought his who pursues her during the chase. For being a beast that is still looked upon as common, and no man's private possession, whoever has employed so much labor about any of that kind as to find and pursue her has thereby removed her from the state of nature wherein she was common, and hath began a property.

31 ¶ It will perhaps be objected to this, that if gathering the acorns, or other fruits of the earth, etc., makes a right to them, then anyone may engross as much as he will. To which I answer, Not so. The same law of nature that does by this means give us property, does also bound that property too. "God has given us all things richly" (1 Tim. vi. 17), is the voice of reason confirmed by inspiration. But how far has He given it us? To enjoy. As much as anyone can make use of to any advantage of life before it spoils, so much he may by his labor fix a property in; whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus considering the plenty of natural provisions there was a long time in the world, and the few spenders, and to how small a part of that provision the industry of one man could extend itself, and engross it to the prejudice of others—especially keeping within the bounds, set by reason, of what might serve for his use—there could be then little room for quarrels or contentions about property so established.

32 ¶ But the chief matter of property being now not the fruits of the earth, and the beasts that subsist on it, but the earth itself, as that which takes in and carries with it all the rest, I think it is plain that property in that, too, is acquired as the former. As much land as a man tills, plants, improves, cultivates, and can use the product of, so much is his property. He by his labor does as it were enclose it from the common. Nor will it invalidate his right to say, everybody else has an equal title to it; and therefore he cannot appropriate, he cannot enclose, without the consent of all his fellow-commoners, all mankind. God, when He gave the world in common to all mankind, commanded man also to labor, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth, i.e., improve it for the benefit of life, and therein lay out something upon it that was his own, his labor. He that, in obedience to this command of God, subdued, tilled, and sowed any part of it, thereby annexed to it something that was his property, which another had no title to, nor could without injury take from him.

33 ¶ Nor was this appropriation of any parcel of land, by improving it, any prejudice to any other man, since there was still enough and as good left; and more than the yet unprovided could use. So that in effect there was never the less left for others because of his enclosure for himself. For he that leaves as much as another can make use of, does as good as take nothing at all. Nobody could think himself injured by the drinking of another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst; and the case of land and water, where there is enough of both, is perfectly the same.

34 ¶ God gave the world to men in common; but since He gave it them for their benefit, and the greatest conveniences of life they were capable to draw from it, it cannot be sup-

posed He meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational (and labor was to be his title to it), not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labor; if he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labor on, and whereof there was as good left as that already possessed, and more than he knew what to do with, or his industry could reach to.

35 ¶ It is true, in land that is common in England, or any other country where there is plenty of people under Government, who have money and commerce, no one can enclose or appropriate any part without the consent of all his fellow-commoners: because this is left common by compact, i.e., by the law of the land, which is not to be violated. And though it be common in respect of some men, it is not so to all mankind; but is the joint property of this country, or this parish. Besides, the remainder, after such enclosure, would not be as good to the rest of the commoners as the whole was, when they could all make use of the whole; whereas in the beginning and first peopling of the great common of the world it was quite otherwise. The law man was under was rather for appropriating. God commanded, and his wants forced him, to labor. That was his property, which could not be taken from him wherever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined together. The one gave title to the other. So that God, by commanding to subdue, gave authority so far to appropriate. And the condition of human life, which requires labor and materials to work on, necessarily introduces private possessions.

36 ¶ The measure of property nature has well set by the extent of men's labor and the conveniency of life. No man's labor could subdue or appropriate all, nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to entrench upon the right of another or acquire to himself a property to the prejudice of his neighbor, who would still have room for as good and as large a possession (after the other had taken out his) as before it was appropriated. Which measure did confine every man's possession to a very moderate proportion, and such as he might appropriate to himself without injury to anybody in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth than to be straitened for want of room to plant in.

The same measure may be allowed still, without prejudice to anybody, full as the world seems. For, supposing a man or family, in the state they were at first, peopling of the world by the children of Adam or Noah, let him plant in some inland vacant places of America. We shall find that the possessions he could make himself, upon the measures we have given, would not be very large, nor, even to this day, prejudice the rest of mankind or give them reason to complain or think themselves injured by this man's encroachment, though the race of men have now spread themselves to all the corners of the world, and do infinitely exceed the small number was at the beginning. Nay, the extent of ground is of so little value without labor that I have heard it affirmed that in Spain itself a man may be permitted to plough, sow, and reap, without being disturbed, upon land he has no other title to, but only his making use of it. But, on the contrary, the inhabitants think themselves beholden to him who, by his industry on neglected, and consequently waste land, has increased the stock of corn, which they wanted. But be this as it will, which I lay no stress on, this I dare boldly affirm, that the same rule of propriety—viz., that every man should have as much as he could make use of, would hold still in the world, without

straitening anybody, since there is land enough in the world to suffice double the inhabitants, had not the invention of money, and the tacit agreement of men to put a value on it, introduced (by consent) larger possessions and a right to them; which, how it has done, I shall by and by show more at large.

37 ¶ This is certain, that in the beginning, before the desire of having more than man needed had altered the intrinsic value of things, which depends only on their usefulness to the life of man; or had agreed that a little piece of yellow metal which would keep without wasting or decay should be worth a great piece of flesh or a whole heap of corn, though men had a right to appropriate by their labor, each one to himself, as much of the things of nature as he could use, yet this could not be much, nor to the prejudice of others, where the same plenty was still left to those who would use the same industry.

Before the appropriation of land, he who gathered as much of the wild fruit, killed, caught, or tamed as many of the beasts as he could; he that so employed his pains about any of the spontaneous products of nature as any way to alter them from the state which nature put them in, by placing any of his labor on them, did thereby acquire a propriety in them. But if they perished in his possession without their due use; if the fruits rotted, or the venison putrefied before he could spend it, he offended against the common law of nature, and was liable to be punished; he invaded his neighbor's share, for he had no right further than his use called for any of them and they might serve to afford him conveniences of life.

38 ¶ The same measures governed the possessions of land, too. Whatsoever he tilled and reaped, laid up, and made use of before it spoiled, that was his peculiar right; whatsoever he enclosed and could feed and make use of, the cattle and

product was also his. But if either the grass of his enclosure rotted on the ground, or the fruit of his planting perished without gathering and laying up, this part of the earth, notwithstanding his enclosure, was still to be looked on as waste, and might be the possession of any other. Thus, at the beginning, Cain might take as much ground as he could till and make it his own land, and yet leave enough for Abel's sheep to feed on; a few acres would serve for both their possessions. But as families increased, and industry enlarged their stocks, their possessions enlarged with the need of them; but yet it was commonly without any fixed property in the ground they made use of, till they incorporated, settled themselves together, and built cities; and then, by consent, they came in time to set out the bounds of their distinct territories, and agree on limits between them and their neighbors, and, by laws within themselves, settled the properties of those of the same society. For we see that in that part of the world which was first inhabited, and therefore like to be best peopled, even as low down as Abraham's time, they wandered with their flocks and their herds, which was their substance, freely up and down—and this Abraham did in a country where he was a stranger; whence it is plain that, at least, a great part of the land lay in common, that the inhabitants valued it not, nor claimed property in any more than they made use of; but when there was not room enough in the same place for their herds to feed together, they, by consent, as Abraham and Lot did (Gen. xiii. 5), separated and enlarged their pasture where it best liked them. And for the same reason, Esau went from his father and his brother, and planted in Mount Seir (Gen. xxxvi. 6).

39 ¶ And thus, without supposing any private dominion and property in Adam over all the world, exclusive of all other men, which can no way be proved, nor any one's property be made out from it, but supposing the world, given as it was to the children of men in common, we see how labor

could make men distinct titles to several parcels of it for their private uses, wherein there could be no doubt of right, no room for quarrel.

40 ¶ Nor is it so strange, as perhaps before consideration it may appear, that the property of labor should be able to over-balance the community of land. For it is labor indeed that puts the difference of value on everything; and let anyone consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common without any husbandry upon it, and he will find that the improvement of labor makes the far greater part of the value. I think it will be but a very modest computation to say that of the products of the earth useful to the life of man nine-tenths are the effects of labor; nay, if we will rightly estimate things as they come to our use, and cast up the several expenses about them—what in them is purely owing to nature, and what to labor—we shall find that in most of them ninety-nine hundredths are wholly to be put on the account of labor.

41 ¶ There cannot be a clearer demonstration of anything than several nations of the Americans are of this, who are rich in land and poor in all the comforts of life; whom nature, having furnished as liberally as any other people with the materials of plenty—i.e., a fruitful soil, apt to produce in abundance what might serve for food, raiment, and delight; yet, for want of improving it by labor, have not one hundredth part of the conveniences we enjoy, and a king of a large and fruitful territory there feeds, lodges, and is clad worse than a day laborer in England.

42 ¶ To make this a little clearer, let us but trace some of the ordinary provisions of life, through their several progresses, before they come to our use, and see how much they

receive of their value from human industry. Bread, wine, and cloth are things of daily use and great plenty; yet notwithstanding, acorns, water, and leaves or skins, must be our bread, drink, and clothing, did not labor furnish us with these more useful commodities. For whatever bread is more worth than acorns, wine than water, and cloth or silk than leaves, skins, or moss, that is wholly owing to labor and industry: the one of these being the food and raiment which unassisted nature furnishes us with; the other, provisions which our industry and pains prepare for us; which how much they exceed the other in value when anyone hath computed, he will then see how much labor makes the far greatest part of the value of things we enjoy in this world. And the ground which produces the materials is scarce to be reckoned in as any, or at most but a very small, part of it; so little that even amongst us land that is left wholly to nature, that hath no improvement of pasturage, tillage, or planting, is called, as indeed it is, "waste," and we shall find the benefit of it amount to little more than nothing.

43 ¶ An acre of land that bears here twenty bushels of wheat, and another in America which, with the same husbandry, would do the like, are without doubt of the same natural intrinsic value; but yet the benefit mankind receives from the one in a year is worth £5, and from the other possibly not worth a penny, if all the profit an Indian received from it were to be valued and sold here; at least, I may truly say, not one-thousandth. 'Tis labor, then, which puts the greatest part of value upon land, without which it would scarcely be worth anything; 'tis to that we owe the greatest part of all its useful products, for all that the straw, bran, bread, of that acre of wheat is more worth than the product of an acre of as good land which lies waste, is all the effect of labor. For 'tis not barely the ploughman's pains, the reaper's and thresher's toil, and the baker's sweat, is to be counted into the bread we eat; the labor of those who broke the oxen, who dug and wrought the iron and stones, who felled and

framed the timber employed about the plough, mill, oven, or any other utensils, which are a vast number, requisite to this corn, from its sowing, to its being made bread, must all be charged on the account of labor, and received as an effect of that. Nature and the earth furnished only the almost worthless materials as in themselves. 'T would be a strange catalogue of things that industry provided, and made use of, about every loaf of bread before it came to our use, if we could trace them—iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dyeing drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship that brought any of the commodities made use of by any of the workmen to any part of the work all which it would be almost impossible—at least, too long—to reckon up.

44 ¶ From all which it is evident that, though the things of nature are given in common, yet man, by being master of himself and proprietor of his own person and the actions or labor of it, had still in himself the great foundation of property; and that which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniences of life, was perfectly his own, and did not belong in common to others.

45 ¶ Thus labor, in the beginning, gave a right of property, wherever anyone was pleased to employ it upon what was common, which remained a long while the far greater part, and is yet more than mankind makes use of. Men at first, for the most part, contented themselves with what unassisted nature offered to their necessities; and though afterwards, in some parts of the world (where the increase of people and stock, with the use of money, had made land scarce, and so of some value), the several communities settled the bounds of their distinct territories, and, by laws within themselves, regulated the properties of the private men of their society, and so, by compact and agreement, settled the property which

labor and industry began—and the leagues that have been made between several states and kingdoms, either expressly or tacitly disowning all claim and right to the land in the other's possession, have, by common consent, given up their pretenses to their natural common right, which originally they had to those countries; and so have, by positive agreement, settled a property amongst themselves in distinct parts of the world—yet there are still great tracts of ground to be found which, the inhabitants thereof not having joined with the rest of mankind in the consent of the use of their common money, lie waste, and are more than the people who dwell on it do or can make use of, and so still lie in common; though this can scarce happen amongst that part of mankind that have consented to the use of money.

46 ¶ The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, are generally things of short duration, such as, if they are not consumed by use, will decay and perish of themselves: gold, silver, and diamonds are things that fancy or agreement have put the value on more than real use and the necessary support of life. Now, of those good things which nature hath provided in common, everyone hath a right, as hath been said, to as much as he could use, and had a property in all he could effect with his labor—all that his industry could extend to, to alter from the state nature had put it in, was his. He that gathered a hundred bushels of acorns or apples had thereby a property in them; they were his goods as soon as gathered. He was only to look that he used them before they spoiled, else he took more than his share, and robbed others; and, indeed, it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to anybody else, so that it perished not uselessly in his possession, these he also made use of; and if he also bartered away plums that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted

not the common stock, destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its color, or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life, he invaded not the right of others; he might heap up as much of these durable things as he pleased, the exceeding of the bounds of his just property not lying in the largeness of his possessions, but the perishing of anything uselessly in it.

47 ¶ And thus came in the use of money—some lasting thing that men might keep without spoiling, and that, by mutual consent, men would take in exchange for the truly useful but perishable supports of life.

48 ¶ And as different degrees of industry were apt to give men possessions in different proportions, so this invention of money gave them the opportunity to continue and enlarge them; for supposing an island, separate from all possible commerce with the rest of the world, wherein there were but a hundred families—but there were sheep, horses, and cows, with other useful animals, wholesome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness or perishableness, fit to supply the place of money—what reason could anyone have there to enlarge his possessions beyond the use of his family and a plentiful supply to its consumption, either in what their own industry produced, or they could barter for like perishable useful commodities with others? Where there is not something both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their possessions of land, were it never so rich, never so free for them to take; for I ask, what would a man value ten thousand or a hundred thousand acres of excellent land, ready cultivated, and well stocked too with cattle, in the middle of the

inland parts of America, where he had no hopes of commerce with other parts of the world, to draw money to him by the sale of the product? It would not be worth the enclosing, and we should see him give up again to the wild common of nature whatever was more than would supply the conveniences of life to be had there for him and his family.

49 ¶ Thus in the beginning all the world was America, and more so than that is now, for no such thing as money was anywhere known. Find out something that hath the use and value of money amongst his neighbors, you shall see the same man will begin presently to enlarge his possessions.

50 ¶ But since gold and silver, being little useful to the life of man in proportion to food, raiment, and carriage, has its value only from the consent of men, whereof labor yet makes, in great part, the measure, it is plain that the consent of men have agreed to a disproportionate and unequal possession of the earth—I mean out of the bounds of society and compact; for in governments the laws regulate it; they having, by consent, found out and agreed in a way how a man may rightfully and without injury possess more than he himself can make use of by receiving gold and silver, which may continue long in a man's possession, without decaying for the overplus, and agreeing those metals should have a value.

51 ¶ And thus, I think, it is very easy to conceive without any difficulty how labor could at first begin a title of property in the common things of nature, and how the spending it upon our uses bounded it; so that there could then be no reason of quarrelling about title, nor any doubt about the largeness of possession it gave. Right and conveniency went together; for as a man had a right to all he could employ his labor upon, so he had no temptation to labor for more than he could make use of. This left no room for controversy

about the title, nor for encroachment on the right of others; what portion a man carved to himself was easily seen, and it was useless, as well as dishonest, to carve himself too much, or take more than he needed.

CHAPTER VI

Of Paternal Power

52 ¶ It may perhaps be censured an impertinent criticism in a discourse of this nature to find fault with words and names that have obtained in the world. And yet possibly it may not be amiss to offer new ones when the old are apt to lead men into mistakes, as this of paternal power probably has done, which seems so to place the power of parents over their children wholly in the father, as if the mother had no share in it; whereas if we consult reason or revelation, we shall find she has an equal title, which may give one reason to ask whether this might not be more properly called parental power? For whatever obligation nature and the right of generation lays on children, it must certainly bind them equal to both the concurrent causes of it. And accordingly we see the positive law of God everywhere joins them together without distinction, when it commands the obedience of children; "Honor thy father and thy mother" (Exod. xx. 12); "Whosoever curseth his father or his mother" (Lev. xx. 9); "Ye shall fear every man his mother and his father" (Lev. xix. 3); "Children obey your parents," etc. (Eph. vi. 1), is the style of the Old and New Testament.

53 ¶ Had but this one thing been well considered without looking any deeper into the matter, it might perhaps have kept men from running into those gross mistakes they have made about this power of parents, which however it might

without any great harshness bear the name of absolute dominion and regal authority, when under the title of "paternal" power, it seemed appropriated to the father; would yet have sounded but oddly, and in the very name shown the absurdity, if this supposed absolute power over children had been called parental, and thereby discovered that it belonged to the mother too. For it will but very ill serve the turn of those men who contend so much for the absolute power and authority of the fatherhood, as they call it, that the mother should have any share in it. And it would have but ill supported the monarchy they contend for, when by the very name it appeared that that fundamental authority from whence they would derive their government of a single person only was not placed in one, but two persons jointly. But to let this of names pass.

54 ¶ Though I have said above (2) "That all men by nature are equal," I cannot be supposed to understand all sorts of "equality." Age or virtue may give men a just precedency. Excellency of parts and merit may place others above the common level. Birth may subject some, and alliance or benefits others, to pay an observance to those to whom nature, gratitude, or other respects, may have made it due; and yet all this consists with the equality which all men are in in respect of jurisdiction or dominion one over another, which was the equality I there spoke of as proper to the business in hand, being that equal right that every man hath to his natural freedom, without being subjected to the will or authority of any other man.

55 ¶ Children, I confess, are not born in this full state of equality, though they are born to it. Their parents have a sort of rule and jurisdiction over them when they come into the world, and for some time after, but it is but a temporary one. The bonds of this subjection are like the swaddling clothes they are wrapt up in and supported by in the weakness

of their infancy. Age and reason as they grow up loosen them, till at length they drop quite off, and leave a man at his own free disposal.

56 ¶ Adam was created a perfect man, his body and mind in full possession of their strength and reason, and so was capable from the first instance of his being to provide for his own support and preservation, and govern his actions according to the dictates of the law of reason God had implanted in him. From him the world is peopled with his descendants, who are all born infants, weak and helpless, without knowledge or understanding. But to supply the defects of this imperfect state till the improvement of growth and age had removed them, Adam and Eve, and after them all parents were, by the law of nature, under an obligation to preserve, nourish and educate the children they had begotten, not as their own workmanship, but the workmanship of their own Maker, the Almighty, to whom they were to be accountable for them.

57 ¶ The law that was to govern Adam was the same that was to govern all his posterity, the law of reason. But his offspring having another way of entrance into the world, different from him, by a natural birth, that produced them ignorant, and without the use of reason, they were not presently under that law. For nobody can be under a law that is not promulgated to him; and this law being promulgated or made known by reason only, he that is not come to the use of his reason cannot be said to be under this law; and Adam's children being not presently as soon as born under this law of reason, were not presently free. For law, in its true notion, is not so much the limitation as the direction of a free and intelligent agent to his proper interest, and prescribes no farther than is for the general good of those under that law. Could they be happier without it, the law, as a useless thing, would of itself vanish; and that ill deserves the name of confinement

which hedges us in only from bogs and precipices. So that however it may be mistaken, the end of law is not to abolish or restrain, but to preserve and enlarge freedom. For in all the states of created beings, capable of laws, where there is no law there is no freedom. For liberty is to be free from restraint and violence from others, which cannot be where there is no law; and is not, as we are told, "a liberty for every man to do what he lists." For who could be free, when every other man's humor might domineer over him? But a liberty to dispose and order freely as he lists his person, actions, possessions, and his whole property within the allowance of those laws under which he is, and therein not to be subject to the arbitrary will of another, but freely follow his own.

58 ¶ The power, then, that parents have over their children arises from that duty which is incumbent on them, to take care of their offspring during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant nonage, till reason shall take its place and ease them of that trouble, is what the children want, and the parents are bound to. For God having given man an understanding to direct his actions, has allowed him a freedom of will and liberty of acting, as properly belonging thereunto, within the bounds of that law he is under. But whilst he is in an estate wherein he has no understanding of his own to direct his will, he is not to have any will of his own to follow. He that understands for him must will for him too; he must prescribe to his will, and regulate his actions, but when he comes to the estate that made his father a free man, the son is a free man too.

59 ¶ This holds in all the laws a man is under, whether natural or civil. Is a man under the law of nature? What made him free of that law? what gave him a free disposing of his property, according to his own will, within the compass of that law? I answer, an estate wherein he might be supposed

capable to know that law, that so he might keep his actions within the bounds of it. When he has acquired that state, he is presumed to know how far that law is to be his guide, and how far he may make use of his freedom, and so comes to have it; till then, somebody else must guide him, who is presumed to know how far the law allows a liberty. If such a state of reason, such an age of discretion, made him free, the same shall make his son free too. Is a man under the law of England? What made him free of that law—that is, to have the liberty to dispose of his actions and possessions, according to his own will, within the permission of that law? a capacity of knowing that law. Which is supposed, by that law, at the age of twenty-one, and in some cases sooner. If this made the father free, it shall make the son free too. Till then, we see the law allows the son to have no will, but he is to be guided by the will of his father or guardian, who is to understand for him. And if the father die and fail to substitute a deputy in this trust, if he hath not provided a tutor to govern his son during his minority, during his want of understanding, the law takes care to do it: some other must govern him and be a will to him till he hath attained to a state of freedom, and his understanding be fit to take the government of his will. But after that the father and son are equally free, as much as tutor and pupil, after nonage, equally subjects of the same law together, without any dominion left in the father over the life, liberty, or estate of his son, whether they be only in the state and under the law of nature, or under the positive laws of an established government.

60 ¶ But if through defects that may happen out of the ordinary course of nature, anyone comes not to such a degree of reason wherein he might be supposed capable of knowing the law, and so living within the rules of it, he is never capable of being a free man, he is never let loose to the disposal of his own will; because he knows no bounds to it, has not understanding, its proper guide, but is continued under the tuition and government of others all the time his own understanding

is incapable of that charge. And so lunatics and idiots are never set free from the government of their parents: "Children who are not as yet come unto those years whereat they may have, and innocents, which are excluded by a natural defect from ever having." Thirdly, "Madmen, which, for the present, cannot possibly have the use of right reason to guide themselves, have, for their guide, the reason that guideth other men which are tutors over them, to seek and procure their good for them," says Hooker (Eccl. Pol., lib. i., sect. 7). All which seems no more than that duty which God and nature has laid on man, as well as other creatures, to preserve their offspring till they can be able to shift for themselves, and will scarce amount to an instance or proof of parents' regal authority.

61 ¶ Thus we are born free as we are born rational; not that we have actually the exercise of either: age that brings one, brings with it the other too. And thus we see how natural freedom and subjection to parents may consist together, and are both founded on the same principle. A child is free by his father's title, by his father's understanding, which is to govern him till he hath it of his own. The freedom of a man at years of discretion, and the subjection of a child to his parents, whilst yet short of it, are so consistent and so distinguishable that the most blinded contenders for monarchy, "by right of fatherhood," cannot miss of it; the most obstinate cannot but allow of it. For were their doctrine all true, were the right heir of Adam now known, and, by that title, settled a monarch in his throne, invested with all the absolute unlimited power Sir Robert Filmer talks of, if he should die as soon as his heir were born, must not the child, notwithstanding he were never so free, never so much sovereign, be in subjection to his mother and nurse, to tutors and governors, till age and education brought him reason and ability to govern himself and others? The necessities of his life, the health of his body, and the information of his mind would require him to be directed

by the will of others and not his own; and yet will anyone think that this restraint and subjection were inconsistent with, or spoiled him of, that liberty or sovereignty he had a right to, or gave away his empire to those who had the government of his nonage? This government over him only prepared him the better and sooner for it. If anybody should ask me when my son is of age to be free, I shall answer, just when his monarch is of age to govern. "But at what time," says the judicious Hooker (*Eccl. Pol.*, lib. i., sect. 6), "a man may be said to have attained so far forth the use of reason as sufficeth to make him capable of those laws whereby he is then bound to guide his actions; this is a great deal more easy for sense to discern than for anyone, by skill and learning, to determine."

62 ¶ Commonwealths themselves take notice of, and allow that there is a time when men are to begin to act like free men, and therefore, till that time, require not oaths of fealty or allegiance, or other public owning of, or submission to the government of their countries.

63 ¶ The freedom then of man, and liberty of acting according to his own will, is grounded on his having reason, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free, but to thrust him out amongst brutes, and abandon him to a state as wretched and as much beneath that of a man as theirs. This is that which puts the authority into the parents' hands to govern the minority of their children. God hath made it their business to employ this care on their offspring, and hath placed in them suitable inclinations of tenderness and concern to temper this power, to apply it as His wisdom designed it, to the children's good as long as they should need to be under it.

64 ¶ But what reason can hence advance this care of the parents due to their offspring into an absolute, arbitrary dominion of the father, whose power reaches no farther than by such a discipline as he finds most effectual to give such strength and health to their bodies, such vigor and rectitude to their minds, as may best fit his children to be most useful to themselves and others, and, if it be necessary to his condition, to make them work when they are able for their own subsistence; but in this power the mother, too, has her share with the father.

65 ¶ Nay, this power so little belongs to the father by any peculiar right of nature, but only as he is guardian of his children, that when he quits his care of them he loses his power over them, which goes along with their nourishment and education, to which it is inseparably annexed, and belongs as much to the foster-father of an exposed child as to the natural father of another. So little power does the bare act of begetting give a man over his issue, if all his care ends there, and this be all the title he hath to the name and authority of a father. And what will become of this paternal power in that part of the world where one woman hath more than one husband at a time? or in those parts of America where, when the husband and wife part, which happens frequently, the children are all left to the mother, follow her, and are wholly under her care and provision? And if the father die whilst the children are young, do they not naturally everywhere owe the same obedience to their mother, during their minority, as to their father, were he alive? And will anyone say that the mother hath a legislative power over her children that she can make standing rules which shall be of perpetual obligation, by which they ought to regulate all the concerns of their property, and bound their liberty all the course of their lives, and enforce the observation of them with capital punishments? For this is the proper power of the magistrate, of which the father hath not so much as the

shadow. His command over his children is but temporary, and reaches not their life or property. It is but a help to the weakness and imperfection of their nonage, a discipline necessary to their education. And though a father may dispose of his own possessions as he pleases when his children are out of danger of perishing for want, yet his power extends not to the lives or goods which either their own industry, or another's bounty, has made theirs, not to their liberty neither, when they are once arrived to the enfranchisement of the years of discretion. The father's empire then ceases, and he can from thenceforward no more dispose of the liberty of his son than that of any other man. And it must be far from an absolute or perpetual jurisdiction from which a man may withdraw himself, having license from Divine authority to "leave father and mother and cleave to his wife."

66 ¶ But though there be a time when a child comes to be as free from subjection to the will and command of his father as he himself is free from subjection to the will of anybody else, and they are both under no other restraint but that which is common to them both, whether it be the law of nature or municipal law of their country, yet this freedom exempts not a son from that honor which he ought, by the law of God and nature, to pay his parents, God having made the parents instruments in His great design of continuing the race of mankind and the occasions of life to their children. As He hath laid on them an obligation to nourish, preserve, and bring up their offspring, so He has laid on the children a perpetual obligation of honoring their parents, which, containing in it an inward esteem and reverence to be shown by all outward expressions, ties up the child from anything that may ever injure or affront, disturb or endanger the happiness or life of those from whom he received his, and engages him in all actions of defense, relief, assistance, and comfort of those by whose means he entered into being and has been made capable of any enjoyments of life. From this obligation

no state, no freedom, can absolve children. But this is very far from giving parents a power of command over their children, or an authority to make laws and dispose as they please of their lives or liberties. It is one thing to owe honor, respect, gratitude, and assistance; another to require an absolute obedience and submission. The honor due to parents a monarch on his throne owes his mother, and yet this lessens not his authority nor subjects him to her government.

67 ¶ The subjection of a minor places in the father a temporary government which terminates with the minority of the child; and the honor due from a child places in the parents a perpetual right to respect, reverence, support, and compliance, to more or less, as the father's care, cost, and kindness in his education has been more or less, and this ends not with minority, but holds in all parts and conditions of a man's life. The want of distinguishing these two powers which the father hath, in the right of tuition, during minority, and the right of honor all his life, may perhaps have caused a great part of the mistakes about this matter. For, to speak properly of them, the first of these is rather the privilege of children and duty of parents than any prerogative of paternal power. The nourishment and education of their children is a charge so incumbent on parents for their children's good, that nothing can absolve them from taking care of it. And though the power of commanding and chastising them go along with it, yet God hath woven into the principles of human nature such a tenderness for their offspring, that there is little fear that parents should use their power with too much rigor; the excess is seldom on the severe side, the strong bias of nature drawing the other way. And therefore God Almighty, when He would express His gentle dealing with the Israelites, He tells them that though He chastened them, "He chastened them as a man chastens his son" (Deut. viii. 5)—i.e., with tenderness and affection, and kept them under no severer discipline than what was absolutely best for them, and had been

less kindness to have slackened. This is that power to which children are commanded obedience, that the pains and care of their parents may not be increased or ill-rewarded.

68 ¶ On the other side, honor and support all that which gratitude requires to return; for the benefits received by and from them is the indispensable duty of the child and the proper privilege of the parents. This is intended for the parents' advantage, as the other is for the child's; though education, the parents' duty, seems to have most power, because the ignorance and infirmities of childhood stand in need of restraint and correction, which is a visible exercise of rule and a kind of dominion. And that duty which is comprehended in the word "honor" requires less obedience, though the obligation be stronger on grown than younger children. For who can think the command, "Children obey your parents," requires in a man that has children of his own the same submission to his father as it does in his yet young children to him, and that by this precept he were bound to obey all his father's commands, if, out of a conceit of authority, he should have the indiscretion to treat him still as a boy.

69 ¶ The first part, then, of paternal power, or rather duty, which is education, belongs so to the father that it terminates at a certain season. When the business of education is over it ceases of itself, and is also alienable before. For a man may put the tuition of his son in other hands; and he that has made his son an apprentice to another has discharged him, during that time, of a great part of his obedience, both to himself and to his mother. But all the duty of honor, the other part, remains nevertheless entire to them; nothing can cancel that. It is so inseparable from them both, that the father's authority cannot dispossess the mother of this right, nor can any man discharge his son for honoring her that bore him. But both these are very far from a power to make laws, and enforcing them with penalties that may reach estate, liberty, limbs, and life. The

power of commanding ends with nonage, and though after that honor and respect, support and defence, and whatsoever gratitude can oblige a man to, for the highest benefits he is naturally capable of be always due from a son to his parents, yet all this puts no sceptre into the father's hand, no sovereign power of commanding. He has no dominion over his son's property or actions, nor any right that his will should prescribe to his son's in all things; however, it may become his son in many things, not very inconvenient to him and his family, to pay a deference to it.

70 ¶ A man may owe honor and respect to an ancient or wise man, defense to his child or friend, relief and support to the distressed and gratitude to a benefactor, to such a degree that all he has, all he can do, cannot sufficiently pay it. But all these give no authority, no right of making laws, to anyone over him from whom they are owing. And it is plain all this is due, not to the bare title of father, not only because, as has been said, it is owing to the mother too, but because these obligations to parents, and the degrees of what is required of children, may be varied by the different care and kindness, trouble and expense, is often employed upon one child more than another.

71 ¶ This shows the reason how it comes to pass that parents in societies, where they themselves are subjects, retain a power over their children and have as much right to their subjection as those who are in the state of nature, which could not possibly be if all political power were only paternal, and that, in truth, they were one and the same thing; for then, all paternal power being in the prince, the subject could naturally have none of it. But these two powers, political and paternal, are so perfectly distinct and separate, and built upon so different foundations, and given to so different ends, that every subject that is a father has as much a paternal power over his children as the prince has over his. And every

prince that has parents owes them as much filial duty and obedience as the meanest of his subjects do to theirs, and can therefore contain not any part or degree of that kind of dominion which a prince or magistrate has over his subject.

72 ¶ Though the obligation on the parents to bring up their children, and the obligation on children to honor their parents, contain all the power, on the one hand, and submission on the other, which are proper to this relation, yet there is another power ordinarily in the father, whereby he has a tie on the obedience of his children, which, though it be common to him with other men, yet the occasions of showing it, almost constantly happening to fathers in their private families and in instances of it elsewhere being rare, and less taken notice of, it passes in the world for a part of "paternal jurisdiction." And this is the power men generally have to bestow their estates on those who please them best. The possession of the father being the expectation and inheritance of the children ordinarily, in certain proportions, according to the law and custom of each country, yet it is commonly in the father's power to bestow it with a more sparing or liberal hand, according as the behavior of this or that child hath comported with his will and humor.

73 ¶ This is no small tie to the obedience of children; and there being always annexed to the enjoyment of land a submission to the government of the country of which that land is a part, it has been commonly supposed that a father could oblige his posterity to that government of which he himself was a subject, that his compact held them; whereas, it being only a necessary condition annexed to the land which is under that government, reaches only those who will take it on that condition, and so is no natural tie or engagement, but a voluntary submission; for every man's children being, by nature, as free as himself or any of his ancestors ever were, may, whilst they are in that freedom, choose what society they will join

themselves to, what commonwealth they will put themselves under. But if they will enjoy the inheritance of their ancestors, they must take it on the same terms their ancestors had it, and submit to all the conditions annexed to such a possession. By this power, indeed, fathers oblige their children to obedience to themselves even when they are past minority, and most commonly, too, subject them to this or that political power. But neither of these by any peculiar right of fatherhood, but by the reward they have in their hands to enforce and recompense such a compliance, and is no more power than what a Frenchman has over an Englishman, who, by the hopes of an estate he will leave him, will certainly have a strong tie on his obedience; and if when it is left him, he will enjoy it, he must certainly take it upon the conditions annexed to the possession of land in that country where it lies, whether it be France or England.

74 ¶ To conclude, then, though the father's power of commanding extends no farther than the minority of his children, and to a degree only fit for the discipline and government of that age; and though that honor and respect, and all that which the Latins called piety, which they indispensably owe to their parents all their lifetimes, and in all estates, with all that support and defense, is due to them, gives the father no power of governing—i.e., making laws and exacting penalties on his children; though by this he has no dominion over the property or actions of his son, yet it is obvious to conceive how easy it was, in the first ages of the world, and in places still where the thinness of people gives families leave to separate into unpossessed quarters, and they have room to remove and plant themselves in yet vacant habitations, for the father of the family to become the prince of it; he had been a ruler from the beginning of the infancy of his children; and when they were grown up, since without some government it would be hard for them to live together, it was likeliest it should, by the express or tacit consent of the children, be in the father, where it seemed, without any change, barely to continue. And

when, indeed, nothing more was required to it than the permitting the father to exercise alone in his family that executive power of the law of nature which every free man naturally hath, and by that permission resigning up to him a monarchical power whilst they remained in it. But that this was not by any paternal right, but only by the consent of his children, is evident from hence, that nobody doubts but if a stranger, whom chance or business had brought to his family, had there killed any of his children, or committed any other act, he might condemn and put him to death, or otherwise have punished him as well as any of his children, which was impossible he should do by virtue of any paternal authority over one who was not his child, but by virtue of that executive power of the law of nature which, as a man, he had a right to; and he alone could punish him in his family where the respect of his children had laid by the exercise of such a power, to give way to the dignity and authority they were willing should remain in him above the rest of his family.

75 ¶ Thus it was easy and almost natural for children, by a tacit and almost natural consent, to make way for the father's authority and government. They had been accustomed in their childhood to follow his direction, and to refer their little differences to him; and when they were men, who fitter to rule them? Their little properties and less covetousness seldom afforded greater controversies; and when any should arise, where could they have a fitter umpire than he, by whose care they had every one been sustained and brought up, and who had a tenderness for them all? It is no wonder that they made no distinction betwixt minority and full age, nor looked after one-and-twenty, or any other age, that might make them the free disposers of themselves and fortunes, when they could have no desire to be out of their pupilage. The government they had been under during it continued still to be more their protection than restraint; and they could nowhere find a greater security to their peace, liberties, and fortunes than in the rule of a father.

76 ¶ Thus the natural fathers of families, by an insensible change, became the politic monarchs of them too; and as they chanced to live long, and leave able and worthy heirs for several successions or otherwise, so they laid the foundations of hereditary or elective kingdoms under several constitutions and manors, according as chance, contrivance, or occasions happened to mold them. But if princes have their titles in the father's right, and it be a sufficient proof of the natural right of fathers to political authority, because they commonly were those in whose hands we find, *de facto*, the exercise of government, I say, if this argument be good, it will as strongly prove that all princes, nay, princes only, ought to be priests, since it is as certain that in the beginning "the father of the family was priest, as that he was ruler in his own household."

CHAPTER VII

Of Political or Civil Society

77 ¶ God having made man such a creature, that in his own judgment it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children; to which, in time, that between master and servant came to be added; and though all these might, and commonly did meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family; each of these, or all together, came short of political society, as we shall see, if we consider the different ends, ties, and bounds of each of these.

78 ¶ Conjugal society is made by a voluntary compact be-

tween man and woman, and though it consist chiefly in such a communion and right in one another's bodies as is necessary to its chief end, procreation, yet it draws with it mutual support and assistance, and a communion of interests too, as necessary not only to unite their care and affection, but also necessary to their common offspring, who have a right to be nourished and maintained by them till they are able to provide for themselves.

79 ¶ For the end of conjunction between male and female being not barely procreation, but the continuation of the species, this conjunction betwixt male and female ought to last, even after procreation, so long as is necessary to the nourishment and support of the young ones, who are to be sustained by those that got them till they are able to shift and provide for themselves. This rule, which the infinite wise Maker hath set to the works of His hands, we find the inferior creatures steadily obey. In those vivaporous animals which feed on grass the conjunction between male and female lasts no longer than the very act of copulation, because the teat of the dam being sufficient to nourish the young till it be able to feed on grass, the male only begets, but concerns not himself for the female or young, to whose sustenance he can contribute nothing. But in beasts of prey the conjunction lasts longer, because the dam, not being able well to subsist herself and nourish her numerous offspring by her own prey alone (a more laborious as well as more dangerous way of living than by feeding on grass), the assistance of the male is necessary to the maintenance of their common family, which cannot subsist till they are able to prey for themselves, but by the joint care of male and female. The same is observed in all birds (except some domestic ones, where plenty of food excuses the cock from feeding and taking care of the young brood), whose young, needing food in the nest, the cock and hen continue mates till the young are able to use their wings and provide for themselves.

80 ¶ And herein, I think, lies the chief, if not the only reason, why the male and female in mankind are tied to a longer conjunction than other creatures—viz., because the female is capable of conceiving, and, *de facto*, is commonly with child again, and brings forth too a new birth, long before the former is out of a dependency for support on his parents' help and able to shift for himself, and has all the assistance is due to him from his parents, whereby the father, who is bound to take care for those he hath begot, is under an obligation to continue in conjugal society with the same woman longer than other creatures, whose young, being able to subsist of themselves before the time of procreation returns again, the conjugal bond dissolves of itself, and they are at liberty till Hymen, at his usual anniversary season, summons them again to choose new mates. Wherein one cannot but admire the wisdom of the great Creator, who, having given to man an ability to lay up for the future as well as supply the present necessity, hath made it necessary that society of man and wife should be more lasting than of male and female amongst other creatures, that so their industry might be encouraged, and their interest better united, to make provision and lay up goods for their common issue, which uncertain mixture, or easy and frequent solutions of conjugal society, would mightily disturb.

81 ¶ But though these are ties upon mankind which make the conjugal bonds more firm and lasting in a man than the other species of animals, yet it would give one reason to inquire why this compact, where procreation and education are secured and inheritance taken care for may not be made determinable, either by consent, or at a certain time, or upon certain conditions, as well as any other voluntary compacts, there being no necessity, in the nature of the thing, nor to the ends of it, that it should always be for life—I mean, to such as are under no restraint of any positive law which ordains all such contracts to be perpetual.

82 ¶ But the husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too. It therefore being necessary that the last determination (i.e., the rule) should be placed somewhere, it naturally falls to the man's share as the abler and the stronger. But this, reaching but to the things of their common interest and property, leaves the wife in the full and true possession of what by contract is her peculiar right, and at least gives the husband no more power over her than she has over his life; the power of the husband being so far from that of an absolute monarch that the wife has, in many cases, a liberty to separate from him where natural right or their contract allows it, whether that contract be made by themselves in the state of nature or by the customs or laws of the country they live in, and the children, upon such separation, fall to the father or mother's lot as such contract does determine.

83 ¶ For all the ends of marriage being to be obtained under politic government, as well as in the state of nature, the civil magistrate doth not abridge the right or power of either, naturally necessary to those ends—viz., procreation and mutual support and assistance whilst they are together, but only decides any controversy that may arise between man and wife about them. If it were otherwise, and that absolute sovereignty and power of life and death naturally belonged to the husband, and were necessary to the society between man and wife, there could be no matrimony in any of these countries where the husband is allowed no such absolute authority. But the ends of matrimony requiring no such power in the husband, it was not at all necessary to it. The condition of conjugal society put it not in him; but whatsoever might consist with procreation and support of the children till they could shift for themselves—mutual assistance, comfort, and maintenance—might be varied and regulated by that contract which first united them in that society, nothing being necessary to any society that is not necessary to the ends for which it is made.

84 ¶ The society betwixt parents and children, and the distinct rights and powers belonging respectively to them, I have treated of so largely in the foregoing chapter that I shall not here need to say anything of it; and I think it is plain that it is far different from a politic society.

85 ¶ Master and servant are names as old as history, but given to those of far different condition; for a free man makes himself a servant to another by selling him for a certain time the service he undertakes to do in exchange for wages he is to receive; and though this commonly puts him into the family of his master, and under the ordinary discipline thereof, yet it gives the master but a temporary power over him, and no greater than what is contained in the contract between them. But there is another sort of servants, which by a peculiar name we call slaves, who, being captives taken in a just war, are by the right of nature subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives, and with them their liberties, and lost their estates—and being, in the state of slavery, not capable of any property—cannot in that state be considered as any part of civil society, the chief end whereof is the preservation of property.

86 ¶ Let us therefore consider a master of a family, with all these subordinate relations of wife, children, servants, and slaves, united under the domestic rule of a family, which, what resemblance soever it may have in its order, offices, and number too, with a little commonwealth, yet is very far from it both in its constitution, power and end; or, if it must be thought a monarchy, and the paterfamilias the absolute monarch in it, absolute monarchy will have but a very shattered and short power, when 'tis plain, by what has been said before, that the master of the family has a very distinct and differently limited power, both as to time and extent, over those several persons that are in it; for, excepting slaves (and the family is

as much a family, and his power as paterfamilias as great, whether there be any slaves in the family or no), he has no legislative power of life and death over any of them, and none, too, but what a mistress of a family may have as well as he. And he certainly can have no absolute power over the whole family, who has but a very limited one over every individual in it. But how a family or any other society of men differ from that, which is properly political society, we shall best see by considering wherein political society itself consists.

87 ¶ Man being born, as has been proved, with a title to perfect freedom, and an uncontrolled enjoyment of all the rights and privileges of the law of nature equally with any other man or number of men in the world, hath by nature a power not only to preserve his property—that is, his life, liberty, and estate—against the injuries and attempts of other men, but to judge of and punish the breaches of that law in others as he is persuaded the offense deserves, even with death itself, in crimes where the heinousness of the fact in his opinion requires it. But because no political society can be nor subsist without having in itself the power to preserve the property, and, in order thereunto, punish the offenses of all those of that society, there, and there only, is political society, where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it; and thus all private judgment of every particular member being excluded, the community comes to be umpire; and by understanding indifferent rules and men authorized by the community for their execution, decides all the differences that may happen between any members of that society concerning any matter of right, and punishes those offenses which any member hath committed against the society with such penalties as the law has established; whereby it is easy to discern who are and who are not in political society together. Those who are united into one body, and have a common established law and judicature to

appeal to, with authority to decide controversies between them and punish offenders, are in civil society one with another; but those who have no such common appeal—I mean on earth—are still in the state of nature, each being, where there is no other, judge for himself and executioner, which is, as I have before shown it, the perfect state of nature.

88 ¶ And thus the commonwealth comes by a power to set down what punishment shall belong to the several transgressions which they think worthy of it committed amongst the members of that society, which is the power of making laws, as well as it has the power to punish any injury done unto any of its members by anyone that is not of it, which is the power of war and peace; and all this for the preservation of the property of all the members of that society as far as is possible. But though every man entered into civil society, has quitted his power to punish offenses against the law of nature in prosecution of his own private judgment, yet with the judgment of offenses, which he has given up to the legislative in all cases where he can appeal to the magistrate, he has given a right to the commonwealth to employ his force for the execution of the judgments of the commonwealth whenever he shall be called to it; which, indeed, are his own judgments, they being made by himself or his representative. And herein we have the original of the legislative and executive power of civil society, which is to judge by standing laws how far offenses are to be punished when committed within the commonwealth, and also by occasional judgments founded on the present circumstances of the fact, how far injuries from without are to be vindicated; and in both these to employ all the force of all the members when there shall be need.

89 ¶ Wherever, therefore, any number of men so unite into one society, as to quit everyone his executive power of the law of nature, and to resign it to the public, there, and there only, is a political, or civil society. And this is done wherever

any number of men, in the state of nature, enter into society to make one people, one body politic, under one supreme government, or else when anyone joins himself to, and incorporates with, any government already made. For hereby he authorises the society, or, which is all one, the legislative thereof, to make laws for him, as the public good of the society shall require, to the execution whereof his own assistance (as to his own decrees) is due. And this puts men out of a state of nature into that of a commonwealth, by setting up a judge on earth with authority to determine all the controversies and redress the injuries that may happen to any member of the commonwealth; which judge is the legislative, or magistrates appointed by it. And wherever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

90 ¶ Hence it is evident that absolute monarchy, which by some men is counted the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil government at all. For the end of civil society being to avoid and remedy those inconveniences of the state of nature which necessarily follow from every man's being judge in his own case, by setting up a known authority to which everyone of that society may appeal upon any injury received or controversy that may arise, and which every one of the society ought to obey; wherever any persons are who have not such an authority to appeal to and decide any difference between them there, those persons are still in the state of nature. And so is every absolute prince, in respect of those who are under his dominion.

91 ¶ For he being supposed to have all, both legislative and executive power in himself alone, there is no judge to be found; no appeal lies open to anyone who may fairly and indifferently and with authority decide, and from whence relief

and address may be expected of any injury or inconvenience that may be suffered from or by his order; so that such a man, however entitled—Czar, or Grand Seigneur, or how you please—is as much in the state of nature, with all under his dominion, as he is with the rest of mankind. For wherever any two men are, who have no standing rule and common judge to appeal to on earth for the determination of controversies of right betwixt them, there they are still in the state of nature, and under all the inconveniences of it, with only this woful difference to the subject, or rather slave, of an absolute prince: that, whereas in the ordinary state of nature he has a liberty to judge of his right, and according to the best of his power to maintain it, now, whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in the society ought to have, but, as if he were degraded from the common state of rational creatures, is denied a liberty to judge of or to defend his right; and so is exposed to all the misery and inconveniences that a man can fear from one who, being in the unrestrained state of nature, is yet corrupted with flattery, and armed with power.

92 ¶ For he that thinks absolute power purifies men's blood, and corrects the baseness of human nature, need read but the history of this or any other age, to be convinced of the contrary. He that would have been insolent and injurious in the woods of America, would not probably be much better in a throne; where, perhaps, learning and religion shall be found out to justify all that he shall do to his subjects, and the sword presently silence all those that dare question it. For what the protection of absolute monarchy is, what kind of fathers of their countries it makes princes to be, and to what a degree of happiness and security it carries civil society, where this sort of government is grown to perfection, he that will look into the late relation of Ceylon may easily see.

93 ¶ In absolute monarchies, indeed, as well as other gov-

ernments of the world, the subjects have an appeal to the law, and judges to decide any controversies and restrain any violence that may happen betwixt the subjects themselves, one amongst another. This everyone thinks necessary, and believes he deserves to be thought a declared enemy to society and mankind who should go about to take it away. But whether this be from a true love of mankind and society, and such a charity as we owe all one to another, there is reason to doubt. For this is no more than that every man who loves his own power, profit, or greatness may, and naturally must do, keep those animals from hurting or destroying one another who labor and drudge only for his pleasure and advantage; and so are taken care of, not out of any love the master has for them, but love of himself, and the profit they bring him. For if it be asked, what security, what fence is there, in such a state, against the violence and oppression of this absolute ruler, the very question can scarce be borne. They are ready to tell you that it deserves death only to ask after safety. Betwixt subject and subject they will grant there must be measures, laws and judges, for their mutual peace and security; but as for the ruler, he ought to be absolute, and is above all such circumstances; because he has power to do more hurt and wrong, 'tis right when he does it. To ask how you may be guarded from harm or injury on that side where the strongest hand is to do it, is presently the voice of faction and rebellion. As if when men quitting the state of nature entered into society, they agreed that all of them but one should be under the restraint of laws, but that he should still retain all the liberty of the state of nature, increased with power, and made licentious by impunity. This is to think that men are so foolish that they take care to avoid what mischiefs may be done them by polecats or foxes, but are content, nay, think it safety, to be devoured by lions.

94 ¶ But, whatever flatterers may talk to amuse people's understandings, it never hinders men from feeling; and when they perceive that any man, in what station soever, is out of

the bounds of the civil society they are of, and that they have no appeal on earth against any harm they may receive from him, they are apt to think themselves in the state of nature in respect of him whom they find to be so; and to take care, as soon as they can, to have that safety and security in civil society for which it was first instituted, and for which only they entered into it. And, therefore, though perhaps at first (as shall be shown more at large hereafter in the following part of this discourse), some one good and excellent man, having got a pre-eminence amongst the rest, had this deference paid to his goodness and virtue, as to a kind of natural authority, that the chief rule, with arbitration of their differences, by a tacit consent devolved into his hands, without any other caution but the assurance they had of his uprightness and wisdom; yet when time, giving authority and (as some men would persuade us) sacredness to customs which the negligent and unforeseeing innocence of the first ages began, had brought in successors of another stamp, the people finding their properties not secure under the government, as then it was (whereas government has no other end but the preservation of property), could never be safe nor at rest, nor think themselves in civil society, till the legislative was placed in collective bodies of men, call them Senate, Parliament, or what you please. By which means every single person became subject, equally with other the meanest men, to those laws, which he himself, as part of the legislative, had established; nor could anyone by his own authority avoid the force of the law when once made, nor by any pretense of superiority plead exemption, thereby to license his own, or the miscarriages of any of his dependents. No man in civil society can be exempted from the laws of it. For if any man may do what he thinks fit, and there be no appeal on earth for redress or security against any harm he shall do, I ask whether he be not perfectly still in the state of nature, and so can be no part or member of that civil society; unless anyone will say the state of nature and civil society are one and the same thing, which I have never yet found anyone so great a patron of anarchy as to affirm.

CHAPTER VIII

Of the Beginning of Political Societies

95 ¶ Men being, as has been said, by nature all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent, which is done by agreeing with other men to join and unite into a community for their comfortable, safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so consented to make one community or government, they are thereby presently incorporated, and make one body politic, wherein the majority have a right to act and conclude the rest.

96 ¶ For when any number of men have, by the consent of every individual, made a community, they have thereby made that community one body, with a power to act as one body, which is only by the will and determination of the majority. For that which acts any community being only the consent of the individuals of it, and it being one body must move one way, it is necessary the body should move that way whither the greater force carries it, which is the consent of the majority; or else it is impossible it should act or continue one body, one community, which the consent of every individual that united into it agreed that it should; and so everyone is bound by that consent to be concluded by the majority. And therefore we see that in assemblies empowered to act by positive laws, where no number is set by that positive law which empowers them, the act of the majority passes for the act of

the whole, and of course determines, as having by the law of nature and reason the power of the whole.

97 ¶ And thus every man, by consenting with others to make one body politic under one government, puts himself under an obligation to every one of that society, to submit to the determination of the majority, and to be concluded by it; or else this original compact, whereby he with others incorporates into one society, would signify nothing, and be no compact, if he be left free and under no other ties than he was in before in the state of nature. For what appearance would there be of any compact? What new engagement if he were no further tied by any decrees of the society, than he himself thought fit, and did actually consent to? This would be still as great a liberty as he himself had before his compact, or anyone else in the state of nature hath, who may submit himself and consent to any acts of it if he thinks fit.

98 ¶ For if the consent of the majority shall not in reason be received as the act of the whole and conclude every individual, nothing but the consent of every individual can make anything to be the act of the whole, which considering the infirmities of health and avocations of business, which in a number, though much less than that of a commonwealth, will necessarily keep many away from the public assembly, and the variety of opinions, and contrariety of interest, which unavoidably happen in all collections of men, 'tis next to impossible ever to be had. And therefore if the coming into society be upon such terms it will be only like Cato's coming into the theater, *tantum ut exiret*. Such a constitution as this would make the mighty leviathan of a shorter duration than the feeblest creatures, and not let it outlast the day it was born in; which cannot be supposed till we can think that rational creatures should desire and constitute societies only to be dissolved. For where the majority cannot conclude the rest, there

they cannot act as one body, and consequently will be immediately dissolved again.

99 ¶ Whosoever therefore out of a state of nature unite into a community must be understood to give up all the power necessary to the ends for which they unite into society, to the majority of the community, unless they expressly agreed in any number greater than the majority. And this is done by barely agreeing to unite into one political society, which is all the compact that is, or needs be, between the individuals that enter into or make up a commonwealth. And thus that which begins and actually constitutes any political society is nothing but the consent of any number of freemen capable of a majority to unite and incorporate into such a society. And this is that, and that only, which did or could give beginning to any lawful government in the world.

100 ¶ To this I find two objections made.

First: That there are no instances to be found in story of a company of men independent, and equal one amongst another, that met together and in this way began and set up a government.

Secondly: 'Tis impossible of right that men should do so, because all men being born under government, they are to submit to that, and are not at liberty to begin a new one.

101 ¶ To the first there is this to answer—That it is not at all to be wondered that history gives us but a very little account of men that lived together in the state of nature. The inconveniences of that condition, and the love and want of society, no sooner brought any number of them together, but they presently united and incorporated if they designed to continue together. And if we may not suppose men ever to have been in the state of nature, because we hear not much of them in such a state, we may as well suppose the armies of

Salmanasser or Xerxes were never children, because we hear little of them till they were men, and embodied in armies. Government is everywhere antecedent to records, and letters seldom come in amongst a people, till a long continuation of civil society has, by other more necessary arts, provided for their safety, ease, and plenty. And then they begin to look after the history of their founders, and search into their original, when they have outlived the memory of it. For 'tis with commonwealths as with particular persons, they are commonly ignorant of their own birth and infancies. And if they know anything of their original, they are beholden for it to the accidental records that others have kept of it. And those that we have of the beginning of any polities in the world, excepting that of the Jews, where God Himself immediately interposed, and which favors not at all paternal dominion, are all either plain instances of such a beginning as I have mentioned, or at least have manifest footsteps of it.

102 ¶ He must show a strange inclination to deny evident matter of fact, when it agrees not with his hypothesis, who will not allow that the beginning of Rome and Venice were by the uniting together of several men, free and independent one of another, amongst whom there was no natural superiority or subjection. And if Josephus Acosta's word may be taken, he tells us that in many parts of America there was no government at all. "There are great and apparent conjectures," says he, "that these men (speaking of those of Peru) for a long time had neither kings nor commonwealths, but lived in troops, as they do this day in Florida—the Cheriquanas, those of Brazil, and many other nations, which have no certain kings, but, as occasion is offered in peace or war, they choose their captains as they please" (Lib. i. cap. 25). If it be said, that every man there was born subject to his father, or the head of his family, that the subjection due from a child to a father took not away his freedom of uniting into what political society he thought fit, has been already proved; but be that as it will, these men, it is evident, were actually free; and

whatever superiority some politicians now would place in any of them, they themselves claimed it not; but, by consent, were all equal, till, by the same consent, they set rulers over themselves. So that their politic societies all began from a voluntary union, and the mutual agreement of men freely acting in the choice of their governors and forms of government.

103 ¶ And I hope those who went away from Sparta, with Palantus, mentioned by Justin, will be allowed to have been freemen independent one of another, and to have set up a government over themselves by their own consent. Thus I have given several examples out of history of people, free and in the state of nature, that, being met together, incorporated and began a commonwealth. And if the want of such instances be an argument to prove that government were not nor could not be so begun, I suppose the contenders for paternal empire were better let it alone than urge it against natural liberty; for if they can give so many instances out of history of governments began upon paternal right, I think (though at least an argument from what has been to what should of right be of no great force) one might, without any great danger, yield them the cause. But if I might advise them in the case, they would do well not to search too much into the original of governments as they have begun *de facto*, lest they should find at the foundation of most of them something very little favorable to the design they promote, and such a power as they contend for.

104 ¶ But, to conclude: reason being plain on our side that men are naturally free; and the examples of history showing that the governments of the world, that were begun in peace, had their beginning laid on that foundation, and were made by the consent of the people; there can be little room for doubt, either where the right is, or what has been the opinion or practice of mankind about the first erecting of governments.

105 ¶ I will not deny that if we look back, as far as history will direct us, towards the original of commonwealths, we shall generally find them under the government and administration of one man. And I am also apt to believe that where a family was numerous enough to subsist by itself, and continued entire together, without mixing with others, as it often happens, where there is much land and few people, the government commonly began in the father. For the father having, by the law of nature, the same power, with every man else, to punish, as he thought fit, any offenses against that law, might thereby punish his transgressing children, even when they were men, and out of their pupilage; and they were very likely to submit to his punishment, and all join with him against the offender in their turns, giving him thereby power to execute his sentence against any transgression, and so, in effect, make him the law-maker and governor over all that remained in conjunction with his family. He was fittest to be trusted; paternal affection secured their property and interest under his care, and the custom of obeying him in their childhood made it easier to submit to him rather than any other. If, therefore, they must have one to rule them, as government is hardly to be avoided amongst men that live together, who so likely to be the man as he that was their common father, unless negligence, cruelty, or any other defect of mind or body, made him unfit for it. But when either the father died, and left his next heir—for want of age, wisdom, courage, or any other qualities—less fit for rule, or where several families met and consented to continue together, there, it is not to be doubted, but they used their natural freedom to set up him whom they judged the ablest and most likely to rule well over them. Conformable hereunto we find the people of America, who—living out of the reach of the conquering swords and spreading domination of the two great empires of Peru and Mexico—enjoyed their own natural freedom, though, *ceteris paribus*, they commonly prefer the heir of their deceased king; yet, if they find him any way weak or incapable, they pass him by, and set up the stoutest and bravest man for their ruler.

106 ¶ Thus, though looking back as far as records give us any account of peopling the world, and the history of nations, we commonly find the government to be in one hand; yet it destroys not that which I affirm, viz.: that the beginning of politic society depends upon the consent of the individuals to join into, and make one society; who when they are thus incorporated, might set up what form of government they thought fit. But this having given occasion to men to mistake, and think that by nature government was monarchical, and belonged to the father, it may not be amiss here to consider why people in the beginning generally pitched upon this form, which, though perhaps the father's pre-eminence might in the first institution of some commonwealths give a rise to, and place in the beginning, the power in one hand; yet it is plain that the reason that continued the form of government in a single person was not any regard or respect to paternal authority, since all petty monarchies, that is, almost all monarchies, near their original, have been commonly—at least upon occasion—elective.

107 ¶ First then, in the beginning of things, the father's government of the childhood of those sprung from him having accustomed them to the rule of one man, and taught them that where it was exercised with care and skill, with affection and love to those under it, it was sufficient to procure and preserve men all the political happiness they sought for in society. It was no wonder that they should pitch upon and naturally run into that form of government, which from their infancy they had been all accustomed to, and which, by experience, they had found both easy and safe. To which, if we add, that monarchy being simple and most obvious to men whom neither experience had instructed in forms of government, nor the ambition or insolence of empire had taught to beware of the encroachments of prerogative, or the inconveniences of absolute power, which monarchy in succession was apt to lay claim to, and bring upon them; it was not at all strange that they should not much trouble themselves to think

of methods of restraining any exorbitances of those to whom they had given the authority over them, and of balancing the power of government, by placing several parts of it in different hands. They had neither felt the oppression of tyrannical dominion, nor did the fashion of the age, nor their possessions or way of living (which afforded little matter for covetousness or ambition), give them any reason to apprehend or provide against it; and therefore it is no wonder they put themselves into such a frame of government as was not only, as I said, most obvious and simple, but also best suited to their present state and condition, which stood more in need of defense against foreign invasions and injuries than of multiplicity of laws, where there was but very little property; and wanted not variety of rulers and abundance of officers to direct and look after their execution, where there were but few trespasses and few offenders. Since, then, those who liked one another so well as to join into society, cannot but be supposed to have some acquaintance and friendship together, and some trust one in another, they could not but have greater apprehensions of others than of one of another; and therefore their first care and thought cannot but be supposed to be how to secure themselves against foreign force. It was natural for them to put themselves under a frame of government which might best serve to that end; and choose the wisest and bravest man to conduct them in their wars, and lead them out against their enemies, and in this chiefly be their ruler.

108 ¶ Thus we see that the kings of the Indians, in America, which is still a pattern of the first ages in Asia and Europe, whilst the inhabitants were too few for the country, and want of people and money gave men no temptation to enlarge their possessions of land or contest for wider extent of ground, are little more than generals of their armies; and though they command absolutely in war, yet at home, and in time of peace, they exercise very little dominion, and have but a very moderate sovereignty, the resolutions of peace and war being ordinarily either in the people or in a council, though the war

itself, which admits not of pluralities of governors, naturally evolves the command into the king's sole authority.

109 ¶ And thus, in Israel itself, the chief business of their judges and first kings seems to have been to be captains in war and leaders of their armies, which (besides what is signified by "going out and in before the people," which was, to march forth to war and home again at the heads of their forces) appears plainly in the story of Jephtha. The Ammonites making war upon Israel, the Gileadites, in fear, send to Jephtha, a bastard of their family, whom they had cast off, and article with him, if he will assist them against the Ammonites, to make him their ruler, which they do in these words: "And the people made him head and captain over them" (Judges xi. 11), which was, as it seems, all one as to be judge. "And he judged Israel" (Judges xii. 7)—that is, was their captain-general—"six years." So when Jotham upbraids the Shechemites with the obligation they had to Gideon, who had been their judge and ruler, he tells them: "He fought for you, and adventured his life for, and delivered you out of the hands of Midian" (Judges ix. 17). Nothing mentioned of him but what he did as a general, and, indeed, that is all is found in his history, or in any of the rest of the judges. And Abimelech particularly is called king, though at most he was but their general. And when, being weary of the ill-conduct of Samuel's sons, the children of Israel desired a king, "like all the nations, to judge them, and to go out before them, and to fight their battles" (1 Sam. viii. 20), God, granting their desire, says to Samuel, "I will send thee a man, and thou shalt anoint him to be captain over my people Israel, that he may save my people out of the hands of the Philistines" (ix. 16). As if the only business of a king had been to lead out their armies and fight in their defense; and, accordingly, at his inauguration, pouring a vial of oil upon him, declares to Saul that "the Lord had anointed him to be captain over his inheritance" (x. 1). And therefore those who, after Saul's being solemnly chosen and saluted king by the tribes at Mispah, were unwilling to have

him their king, make no other objection but this, "How shall this man save us?" (v. 27), as if they should have said: "This man is unfit to be our king, not having skill and conduct enough in war to be able to defend us." And when God resolved to transfer the government to David, it is in these words: "But now thy kingdom shall not continue: the Lord hath sought him a man after His own heart, and the Lord hath commanded him to be captain over His people" (xiii. 14). As if the whole kingly authority were nothing else but to be their general; and therefore the tribes who had stuck to Saul's family, and opposed David's reign, when they came to Hebron with terms of submission to him, they tell him, amongst other arguments, they had to submit to him as to their king, that he was, in effect, their king in Saul's time, and therefore they had no reason but to receive him as their king now. "Also," say they, "in time past, when Saul was king over us, thou wast he that leddest out and broughtest in Israel, and the Lord said unto thee, Thou shalt feed my people Israel, and thou shalt be a captain over Israel."

110 ¶ Thus, whether a family, by degrees, grew up into a commonwealth, and the fatherly authority being continued on to the elder son, everyone in his turn growing up under it tacitly submitted to it, and the easiness and equality of it not offending anyone, everyone acquiesced till time seemed to have confirmed it and settled a right of succession by prescription; or whether several families, or the descendants of several families, whom chance, neighborhood, or business brought together, united into society; the need of a general whose conduct might defend them against their enemies in war, and the great confidence the innocence and sincerity of that poor but virtuous age, such as are almost all those which begin governments that ever come to last in the world, gave men one of another, made the first beginners of commonwealths generally put the rule into one man's hand, without any other express limitation or restraint but what the nature of the thing and the end of government required. It was given

them for the public good and safety, and to those ends, in the infancies of commonwealths, they commonly used it; and unless they had done so, young societies could not have subsisted. Without such nursing fathers, without this care of the governors, all governments would have sunk under the weakness and infirmities of their infancy, the prince and the people had soon perished together.

111 ¶ But the golden age (though before vain ambition, and *amor sceleratus habendi*, evil concupiscence had corrupted men's minds into a mistake of true power and honor) had more virtue, and consequently better governors, as well as less vicious subjects; and there was then no stretching prerogative on the one side to oppress the people, nor, consequently, on the other, any dispute about privilege, to lessen or restrain the power of the magistrate; and so no contest betwixt rulers and people about governors or government. Yet, when ambition and luxury, in future ages, would retain and increase the power, without doing the business for which it was given, and aided by flattery, taught princes to have distinct and separate interests from their people, men found it necessary to examine more carefully the original and rights of government, and to find out ways to restrain the exorbitances and prevent the abuses of that power, which they have entrusted in another's hands, only for their own good, they found was made use of to hurt them.

112 ¶ Thus we may see how probable it is that people that were naturally free, and by their own consent either submitted to the government of their father, or united together out of different families to make a government, should generally put the rule into one man's hands, and choose to be under the conduct of a single person, without so much as by express conditions limiting or regulating his power, which they thought safe enough in his honesty and prudence, though they never dreamt of monarchy being *jure divino*, which we

never heard of among mankind till it was revealed to us by the divinity of this last age, nor ever allowed paternal power to have a right to dominion, or to be the foundation of all government. And thus much may suffice to show that, as far as we have any light from history, we have reason to conclude that all peaceful beginnings of government have been laid in the consent of the people. I say peaceful, because I shall have occasion in another place to speak of conquest, which some esteem a way of beginning of governments.

The other objection I find urged against the beginning of politics in the way I have mentioned is this, viz.:—

113 ¶ That all men being born under government, some or other, it is impossible any of them should ever be free and at liberty to unite together and begin a new one, or ever to be able to erect a lawful government.

If this argument be good, I ask, how came so many lawful monarchies into the world? For if anybody, upon this supposition, can show me any one man, in any age of the world, free to begin a lawful monarchy, I will be bound to show him ten other free men at liberty at the same time to unite and begin a new government under a regal, or any other form, it being demonstration that if anyone, born under the dominion of another, may be so free as to have a right to command others in a new and distinct empire, everyone that is born under the dominion of another may be so free to, and may become a ruler or subject of a distinct separate government. And so by this their own principle either all men, however born, are free, or else there is but one lawful prince, one lawful government in the world. And then they have nothing to do but barely to show us which that is; which, when they have done, I doubt not but all mankind will easily agree to pay obedience to him.

114 ¶ Though it be a sufficient answer to their objection to show that it involves them in the same difficulties that it doth

those they use it against, yet I shall endeavor to discover the weakness of this argument a little farther.

"All men," say they, "are born under government, and therefore they cannot be at liberty to begin a new one. Every-one is born a subject to his father, or his prince, and is therefore under the perpetual tie of subjection and allegiance." It is plain mankind never owned nor considered any such natural subjection that they were born in, to one or to the other that tied them without their own consents, to a subjection to them and their heirs.

115 ¶ For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves and their obedience from the jurisdiction they were born under, and the family or community they were bred up in, and setting up new governments in other places; from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied, as long as there was room enough, till the stronger or more fortunate swallowed the weaker; and those great ones again breaking to pieces, dissolved into lesser dominions, all which are so many testimonies against paternal sovereignty, and plainly prove that it was not the natural right of the father descending to his heirs that made government in the beginning, since it was impossible upon that ground there should have been so many little kingdoms, but only one universal monarchy if men had not been at liberty to separate themselves from their families and their government, be it what it will, that was set up in it, and go and make distinct commonwealths and other governments as they thought fit.

116 ¶ This has been the practice of the world from its first beginning to this day; nor is it now any more hindrance to the freedom of mankind that they are born under constituted and ancient polities that have established laws and set forms

of government, than if they were born in the woods amongst the unconfined inhabitants that run loose in them. For those who would persuade us that by being born under any government we are naturally subjects to it, and have no more any title or pretense to the freedom of the state of nature, have no other reason (bating that of paternal power, which we have already answered) to produce for it, but only because our fathers or progenitors passed away their natural liberty, and thereby bound up themselves and their posterity to a perpetual subjection to the government which they themselves submitted to. It is true that whatever engagements or promises anyone made for himself, he is under the obligation of them, but cannot by any compact whatsoever bind his children or posterity. For his son when a man being altogether as free as his father, any act of the father can no more give away the liberty of the son than it can of anybody else. He may indeed annex such conditions to the land he enjoyed as a subject of any commonwealth as may oblige his son to be of that community, if he will enjoy those possessions which were his father's, because that estate being his father's property he may dispose or settle it as he pleases.

117 ¶ And this has generally given the occasion to the mistake in this matter, because commonwealths not permitting any part of their dominions to be dismembered, nor to be enjoyed by any but those of their community, the son cannot ordinarily enjoy the possessions of his father but under the same terms his father did: by becoming a member of the society; whereby he puts himself presently under the government he finds there established as much as any other subject of that commonwealth. And thus the consent of freemen, born under government, which only makes them members of it, being given separately in their turns, as each comes to be of age, and not in a multitude together. People take no notice of it, and thinking it not done at all, or not necessary, conclude they are naturally subjects as they are men.

118 ¶ But it is plain governments themselves understand it otherwise; they claim no power over the son, because of that they had over the father; nor look on children as being their subjects by their father's being so. If a subject of England have a child by an English woman in France, whose subject is he? Not the King of England's, for he must have leave to be admitted to the privileges of it; nor the King of France's, for how then has his father a liberty to bring him away and breed him as he pleases? And whoever was judged as a traitor or deserter, if he left or warred against a country, for being barely born in it of parents that were aliens there? It is plain then by the practice of governments themselves, as well as by the law of right reason, that a child is born a subject of no country or government. He is under his father's tuition and authority till he comes to age of discretion, and then he is a freeman, at liberty what government he will put himself under, what body politic he will unite himself to. For if an Englishman's son, born in France, be at liberty, and may do so, it is evident there is no tie upon him by his father's being a subject of that kingdom; nor is he bound up by any compact of his ancestors. And why then hath not his son by the same reason, the same liberty, though he be born anywhere else? Since the power that a father hath naturally over his children is the same wherever they be born, and the ties of natural obligations are not bounded by the positive limits of kingdoms and commonwealths.

119 ¶ Every man being, as has been shown, naturally free, and nothing being able to put him into subjection to any earthly power but only his own consent, it is to be considered what shall be understood to be sufficient declaration of a man's consent to make him subject to the laws of any government. There is a common distinction of an express and a tacit consent, which will concern our present case. Nobody doubts but an express consent of any man entering into any society makes him a perfect member of that society, a subject of that government. The difficulty is, what ought to be

looked upon as a tacit consent, and how far it binds, i.e., how far anyone shall be looked on to have consented, and thereby submitted to any government, where he has made no expressions of it at all. And to this I say that every man that hath any possession or enjoyment of any part of the dominions of any government doth thereby give his tacit consent, and is as far forth obliged to obedience to the laws of that government during such enjoyment as anyone under it; whether this his possession be of land to him and his heirs forever, or a lodging only for a week; or whether it be barely traveling freely on the highway; and in effect it reaches as far as the very being of anyone within the territories of that government.

120 ¶ To understand this the better, it is fit to consider that every man when he at first incorporates himself into any commonwealth, he, by his uniting himself thereunto, annexed also, and submits to the community those possessions which he has or shall acquire that do not already belong to any other government; for it would be a direct contradiction for anyone to enter into society with others for the securing and regulating of property, and yet to suppose his land, whose property is to be regulated by the laws of the society, should be exempt from the jurisdiction of that government to which he himself, and the property of the land, is a subject. By the same act, therefore, whereby anyone unites his person, which was before free, to any commonwealth, by the same he unites his possessions, which was before free, to it also; and they become, both of them, person and possession, subject to the government and dominion of that commonwealth as long as it hath a being. Whoever therefore from thenceforth by inheritance, purchases, permission, or otherwise, enjoys any part of the land so annexed to, and under the government of that commonwealth, must take it with the condition it is under, that is, of submitting to the government of the commonwealth under whose jurisdiction it is as far forth as any subject of it.

121 ¶ But since the government has a direct jurisdiction only over the land, and reaches the possessor of it (before he has actually incorporated himself in the society), only as he dwells upon, and enjoys that: the obligation anyone is under, by virtue of such enjoyment, to submit to the government, begins and ends with the enjoyment; so that whenever the owner, who has given nothing but such a tacit consent to the government, will by donation, sale, or otherwise, quit the said possession, he is at liberty to go and incorporate himself into any other commonwealth, or to agree with others to begin a new one (*in vacuis locis*) in any part of the world they can find free and unpossessed. Whereas he that has once by actual agreement and any express declaration given his consent to be of any commonweal is perpetually and indispensably obliged to be and remain unalterably a subject to it, and can never be again in the liberty of the state of nature; unless, by any calamity, the government he was under comes to be dissolved, or else by some public acts cuts him off from being any longer a member of it.

122 ¶ But submitting to the laws of any country, living quietly and enjoying privileges and protection under them makes not a man a member of that society. This is only a local protection and homage due to and from all those who, not being in the state of war, come within the territories belonging to any government to all parts whereof the force of its law extends. But this no more makes a man a member of that society a perpetual subject of that commonwealth, than it would make a man a subject to another in whose family he found it convenient to abide for some time; though whilst he continued in it he were obliged to comply with the laws, and submit to the government he found there. And thus we see, that foreigners by living all their lives under another government, and enjoying the privileges and protection of it, though they are bound even in conscience to submit to its administration as far forth as any denizen, yet do not thereby

come to be subjects or members of that commonwealth. Nothing can make any man so, but his actually entering into it by positive engagement, and express promise and compact. This is that, which I think, concerning the beginning of political societies, and that consent which makes anyone a member of any commonwealth.

CHAPTER IX

Of the Ends of Political Society and Government

123 ¶ If man in the state of nature be so free, as has been said, if he be absolute lord of his own person and possessions, equal to the greatest, and subject to nobody, why will he part with his freedom, this empire, and subject himself to the dominion and control of any other power? To which, it is obvious to answer, that though in the state of nature he hath such a right, yet the enjoyment of it is very uncertain, and constantly exposed to the invasions of others. For all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe, very unsecure. This makes him willing to quit this condition, which, however free, is full of fears and continual dangers; and it is not without reason that he seeks out and is willing to join in society with others, who are already united, or have a mind to unite, for the mutual preservation of their lives, liberties, and estates, which I call by the general name, property.

124 ¶ The great and chief end, therefore, of men's uniting into commonwealths, and putting themselves under government, is the preservation of their property; to which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them. For though the law of nature be plain and intelligible to all rational creatures; yet men, being biased by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

125 ¶ Secondly, In the state of nature there wants a known and indifferent judge, with authority to determine all differences according to the established law. For everyone in that state, being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat in their own cases, as well as negligence and unconcernedness, to make them too remiss in other men's.

126 ¶ Thirdly, In the state of nature there often wants power to back and support the sentence when right, and to give it due execution. They who by any injustice offend, will seldom fail, where they are able by force to make good their injustice; such resistance many times makes the punishment dangerous, and frequently destructive to those who attempt it.

127 ¶ Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition, while they remain in it, are quickly driven into society. Hence it comes to pass that we seldom find any number of men live any time together in this state. The inconveniences that they are therein exposed to by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek the preservation of their property. It is this makes them so willingly give up everyone

his single power of punishing, to be exercised by such alone, as shall be appointed to it amongst them; and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power, as well as of the governments and societies themselves.

128 ¶ For in the state of nature, to omit the liberty he has of innocent delights, a man has two powers.

The first is to do whatsoever he thinks fit for the preservation of himself, and others within the permission of the law of nature, by which law, common to them all, he and all the rest of mankind are of one community, make up one society, distinct from all other creatures. And were it not for the corruption and viciousness of degenerate men there would be no need of any other, no necessity that men should separate from this great and natural community, and associate into lesser combinations.

The other power a man has in the state of nature is the power to punish the crimes committed against that law. Both these he gives up when he joins in a private, if I may so call it, or particular political society, and incorporates into any commonwealth separate from the rest of mankind.

129 ¶ The first power, viz., of doing whatsoever he thought fit for the preservation of himself and the rest of mankind, he gives up to be regulated by laws made by the society, so far forth as the preservation of himself and the rest of that society shall require; which laws of the society in many things confine the liberty he had by the law of nature.

130 ¶ Secondly, The power of punishing he wholly gives up, and engages his natural force (which he might before employ in the execution of the law of nature, by his own single authority as he thought fit), to assist the executive

power of the society, as the law thereof shall require. For being now in a new state, wherein he is to enjoy many conveniences, from the labor, assistance, and society of others in the same community, as well as protection from its whole strength; he has to part also with as much of his natural liberty, in providing for himself, as the good, prosperity and safety of the society shall require; which is not only necessary but just, since the other members of the society do the like.

131 ¶ But though men when they enter into society give up the equality, liberty and executive power they had in the state of nature into the hands of the society, to be so far disposed of by the legislative as the good of the society shall require; yet it being only with an intention in everyone the better to preserve himself, his liberty and property (for no rational creature can be supposed to change his condition with an intention to be worse), the power of the society, or legislative constituted by them, can never be supposed to extend farther than the common good, but is obliged to secure everyone's property by providing against those three defects above-mentioned that made the state of nature so unsafe and uneasy. And so whoever has the legislative or supreme power of any commonwealth is bound to govern by established standing laws, promulgated and known to the people, and not by extemporary decrees; by indifferent and upright judges, who are to decide controversies by those laws; and to employ the force of the community at home only in the execution of such laws, or abroad, to prevent or redress foreign injuries, and secure the community from inroads and invasion. And all this to be directed to no other end but the peace, safety, and public good of the people.

John Stuart Mill

ON LIBERTY

John Stuart Mill
[1806-1873]

The famous James Mill, author of *Elements of Political Economy* and *History of India*, entertained severe ideas about the education of his son. At the age of three, John Stuart was taught mathematics, Latin and Greek by his strict father; at eight he was familiar with Euclid, Herodotus and Plato in the original; at twelve he was expert in Aristotle's logical treatises; and at fifteen he studied psychology and Roman law. All this rigorous training opened the way for a clerkship, when he was seventeen, in India House, where John Stuart Mill remained for twenty years and rose to chief of the examiner's office. A reaction to his father's relentless discipline was inevitable; the son turned to liberalism and began to examine the foundations of society. In philosophy, he was a champion of utilitarianism; in psychology an experimentalist; in political philosophy, wherein his great and lasting work was done, an advocate of progressive liberalism. *On Liberty*, here given in its entirety, is a manifesto against despotism of all kinds and is one of the most eloquent and persuasive arguments ever written for social and political freedom.

ON LIBERTY

JOHN STUART MILL

CHAPTER I

Introductory

The subject of this essay is not the so-called liberty of the will, so unfortunately opposed to the misnamed doctrine of philosophical necessity; but civil, or social liberty: the nature and limits of the power which can be legitimately exercised by society over the individual. A question seldom stated and hardly ever discussed in general terms, but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind almost from the remotest ages; but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between liberty and authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the

popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing tribe or caste, who derived their authority from inheritance or conquest, who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous; as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defense against his beak and claws. The aim, therefore, of patriots was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks, by which the consent of the community, or of a body of some sort, supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and, to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his

tyranny, they did not carry their aspirations beyond this point.

A time, however, came, in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. *That* (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it had continued unaltered.

But in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion that the people have no need to limit their power over themselves, might seem axiomatic when popular government was a thing only dreamed about, or read of as having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of a usurping few, and which, in any case, belonged not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as "self-government," and "the power of the people over themselves," do not express the true state of the case. The "people" who exercise the power are not always the same people with those over whom it is exercised; and the "self-government" spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means the will of the most numerous or the most active *part* of the people; the majority, or those who succeed in making themselves accepted as the majority: the people, consequently *may* desire to oppress a part of their number, and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations "the tyranny of the majority" is

now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly, held in dread chiefly as operating through the acts of the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively over the separate individuals who compose it—its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates; and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practices a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough: there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compels all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence; and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done. All that makes existence valuable to anyone, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the

operation of law. What these rules should be is the principal question in human affairs; but if we except a few of the most obvious cases, it is one of those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were a subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and self-justifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only, as the proverb says, a second nature, but is continually mistaken for the first. The effect of custom, in preventing any misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others or by each to himself. People are accustomed to believe, and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this nature, are better than reasons, and render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathizes, would like them to act. No one, indeed, acknowledges to himself that his standard of judgment is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blamable, are affected by all the

multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which determine their wishes on any other subject. Sometimes their reason, at other times their prejudices or superstitions; often their social affections, not seldom their anti-social ones, their envy or jealousy, their arrogance or contemptuousness: but most commonly their desires or fears for themselves—their legitimate or illegitimate self-interest. Wherever there is an ascendant class, a large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots, between planters and Negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings; and the sentiments thus generated react in turn upon the moral feelings of the members of the ascendant class, in their relations among themselves. Where, on the other hand, a class, formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters or of their gods. This servility, though essentially selfish, is not hypocrisy; it gives rise to perfectly genuine sentiments of abhorrence; it made men burn magicians and heretics. Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments; less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them; and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically

determined the rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavoring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defense of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief: a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense; for the *odium theologicum*, in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were under the necessity of pleading to those whom they could not convert, for permission to differ. It is accordingly on this battlefield, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients openly controverted. The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realized, except where re-

ligious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or a Unitarian; another everyone who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power, with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; insomuch that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognized principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to

bear almost any amount of social evil, rather than add one to the departments of human interests amenable to government control. And men range themselves on one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do, or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other: the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him must be calculated to produce evil to someone else. The only part of the conduct of anyone, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his inde-

pendence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

It is perhaps hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, and there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forego any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of a man as a progressive being. Those interests, I contend, authorized the subjection of individual spontaneity to external

control, only in respect to those actions of each which concern the interest of other people. If anyone does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform: such as to give evidence in a court of justice; to bear his fair share in the common defense, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow-creature's life, or interposing to protect the defenseless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make anyone answerable for doing evil to others is the rule; to make him answerable for not preventing evil is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and, if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgment seat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not

admit of his being made accountable to the judgment of his fellow-creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance; for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency, will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, *first*, the inward domain of consciousness; demanding liberty of conscience in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. *Secondly*, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow: without impediment from our fellow-creatures, so long as what we do does not harm them, even though they should think our conduct foolish, perverse, or wrong. *Thirdly*, from this liberty of each individual, follows the liberty, within the same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the

name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal as of social excellence. The ancient commonwealths thought themselves entitled to practice, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens: a mode of thinking which may have been admissible in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal: that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and, above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in

strongest opposition to the religions of the past, have been no way behind either churches or sects in their assertion of the right of spiritual domination: M. Comte, in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation; and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow-citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, in the present circumstances of the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is, if not fully, yet to a certain point, recognized by the current opinions. This one branch is the *liberty of thought*: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion, as might have been expected.

Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which for now three centuries has been so often discussed, I venture on one discussion more.

CHAPTER II

Of the Liberty of Thought and Discussion

The time, it is to be hoped, is gone by, when any defense would be necessary of the "liberty of the press" as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it need not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety;¹ and, speak-

¹ These words had scarcely been written, when, as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill-judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and, in the second, they were never, properly speaking, political prosecutions.

ing generally, it is not, in constitutional countries, to be apprehended that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make

The offense charged was not that of criticising institutions, or the acts of persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of tyrannicide.

If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would, therefore, be irrelevant and out of place to examine here, whether the doctrine of tyrannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connection can be established between the act and the instigation. Even then, it is not a foreign government, but the very government assailed, which alone, in the exercise of self-defense, can legitimately punish attacks directed against its own existence.

some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race: posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth; if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth, produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavoring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempting to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility is far from carrying the weight in their practical judgment which is always allowed to it in theory; for while everyone well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that any opinion of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all

who surround them, or to whom they habitually defer; for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose, with implicit trust, on the infallibility of "the world" in general. And the world, to each individual, means the part of it with which he comes in contact—his party, his sect, his church, his class of society; the man may be called, by comparison, almost liberal and large-minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions now general will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct can be no valid objection to any con-

duct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake; but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer that it is assuming very much more. There is the greatest difference between presuming an opinion to be true because, with every opportunity for contesting it, it has not been refuted, and assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it for one who is capable;

and the capacity of the hundredth person is only comparative: for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument; but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable

foundation for a just reliance on it: for, being cognizant of all that can, at least obviously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a "devil's advocate." The holiest of men, it appears, cannot be admitted to posthumous honors, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for, have no safeguard to rest on but a standing invitation to the whole world to prove them unfounded. If the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is that men should admit the validity of the arguments for free discussion, but object to their being "pushed to an extreme"; not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibil-

ity, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain while there is anyone who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as “destitute of faith, but terrified at scepticism”—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs so useful, not to say indispensable, to well-being that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practice. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defend-

ing itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions never fail to take all possible advantage of this plea: you do not find *them* handling the question of utility as if it could be completely abstracted from that of truth; on the contrary, it is, above all, because their doctrine is "the truth," that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness when an argument so vital may be employed on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favorable to me—in which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), "Are these the doctrines which you do not deem sufficiently certain to be taken under the protection of law? Is the belief in a God one

of the opinions to feel sure of which you hold to be assuming infallibility?" But I must be permitted to observe that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question *for others*, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his country or his contemporaries, he prevents the opinion from being heard in its defense, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes which excite the astonishment and horror of posterity. It is among such that we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have survived to be (as if in mockery) invoked in defense of similar conduct towards those who dissent from *them*, or from their received interpretation.

Mankind can hardly be too often reminded, that there was once a man named Socrates, between whom and the legal authorities and public opinion of his time there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while *we* know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, "*i maestri di color che sanno*," the two head-

springs of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious—was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognized by the State; indeed his accuser asserted (see the *Apologia*) that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a "corruptor of youth." Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved best of mankind to be put to death as a criminal.

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anticlimax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation such an impression of his moral grandeur that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety which they themselves are now held to be for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the latter of the two, render them extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high priest who rent his garments when the words were pronounced which, according to all the ideas of his country, constituted the blackest

guilt, was in all probability quite as sincere in his horror and indignation as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever anyone possessed of power had grounds for thinking himself the best and most enlightened among his contemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him were all on the side of indulgence; while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity. Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw, or thought he saw, that it was held together, and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was

his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine. But it would be equally unjust to him and false to truth to deny that no one plea which can be urged for punishing anti-Christian teaching was wanting to Marcus Aurelius for punishing as he did the propagation of Christianity. No Christian more firmly believes that atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless anyone who approves of punishment for the promulgation of opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more single-minded in his devotion to it when found; let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson, that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass, and always passes success-

fully, legal penalties being, in the end, powerless against truth, though sometimes beneficially effective against mischievous errors. This is a form of the argument for religious intolerance sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover to the world something which deeply concerns it, and of which it was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow-creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom, that their reward should be to be dealt with as the vilest of criminals, is not, upon this theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors cannot be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that new truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed forever, it may be thrown back for centuries. To speak only of re-

ligious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Hussites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain, Italy, Flanders, the Austrian Empire, Protestantism was rooted out; and, most likely would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman Empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error of prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has, consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favorable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

It will be said that we do not now put to death the introducers of new opinions: we are not like our fathers who slew the prophets, we even build sepulchres to them. It is true we no longer put heretics to death; and the amount of penal infliction which modern feeling would probably tolerate, even against the most obnoxious opinions, is not sufficient to extirpate them. But let us not flatter ourselves that we are yet free from the stain even of legal persecution. Penalties for opinion, or at least for its expression, still exist by law; and

their enforcement is not, even in these times, so unexampled as to make it at all incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man,² said to be of unexceptionable conduct in all relations of life, was sentenced to twenty-one months' imprisonment, for uttering, and writing on a gate, some offensive words concerning Christianity. Within a month of the same time, at the Old Bailey, two persons, on two separate occasions,³ were rejected as jurymen, and one of them grossly insulted by the judge and by one of the counsel, because they honestly declared that they had no theological belief; and a third, a foreigner,⁴ for the same reason, was denied justice against a thief. This refusal of redress took place in virtue of the legal doctrine, that no person can be allowed to give evidence in a court of justice who does not profess belief in a God (any god is sufficient) and in a future state; which is equivalent to declaring such persons to be outlaws, excluded from the protection of the tribunals; who may not only be robbed or assaulted with impunity, if no one but themselves, or persons of similar opinions, be present, but any one else may be robbed or assaulted with impunity, if the proof of the fact depends on their evidence. The assumption on which this is grounded is that the oath is worthless of a person who does not believe in a future state; a proposition which betokens much ignorance of history in those who assent to it (since it is historically true that a large proportion of infidels in all ages have been persons of distinguished integrity and honor); and would be maintained by no one who had the smallest conception how many of the persons in greatest repute with the world, both for virtues and attainments, are well known, at least to their intimates, to be unbelievers. The rule, besides,

² Thomas Pooley, Bodmin Assizes, July 31, 1857. In December following, he received a free pardon from the Crown.

³ George Jacob Holyoake, August 17, 1857; Edward Truelove, July, 1857.

⁴ Baron de Gleichen, Marlborough Street Police Court, August 4, 1857.

is suicidal, and cuts away its own foundation. Under pretense that atheists must be liars, it admits the testimony of all atheists who are willing to lie, and rejects only those who brave the obloquy of publicly confessing a detested creed rather than affirm a falsehood. A rule thus self-convicted of absurdity so far as regards its professed purpose, can be kept in force only as a badge of hatred, a relic of persecution; a persecution, too, having the peculiarity that the qualification for undergoing it is the being clearly proved not to deserve it. The rule, and the theory it implies, are hardly less insulting to believers than to infidels. For if he who does not believe in a future state necessarily lies, it follows that they who do believe are only prevented from lying, if prevented they are, by the fear of hell. We will not do the authors and abettors of the rule the injury of supposing that the conception which they have formed of Christian virtue is drawn from their own consciousness.

These, indeed, are but rags and remnants of persecution, and may be thought to be not so much an indication of the wish to persecute, as an example of that very frequent infirmity of English minds, which makes them take a preposterous pleasure in the assertion of a bad principle, when they are no longer bad enough to desire to carry it really into practice. But unhappily there is no security in the state of the public mind that the suspension of worse forms of legal persecution, which has lasted for about the space of a generation, will continue. In this age the quiet surface of routine is as often ruffled by attempts to resuscitate past evils, as to introduce new benefits. What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution. For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important,

which makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the good will of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as excluded from the means of earning their bread. Those whose bread is already secured, and who desire no favors from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mold to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we do not now inflict so much evil on those who think differently from us as it was formerly our custom to do, it may be that we do ourselves as much evil as ever by our treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance kills no one, roots out no opinions, but induces men to disguise them, or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain, or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smolder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process of fining or imprisoning anybody, it maintains all prevailing opinions outwardly undis-

turbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already! But the price paid for this sort of intellectual pacification is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the general principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to commonplace, or time-servers for truth, whose arguments on all great subjects are meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by narrowing their thoughts and interest to things which can be spoken of without venturing within the region of principles—that is, to small practical matters which would come right of themselves if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then; while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eyes this reticence on the part of heretics is no evil should consider, in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated most by the ban placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the

world loses in the multitude of promising intellect combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtle and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognize that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere an intellectually active people. Where any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times im-

mediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethean and Fichtean period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each, an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or other of them. Appearances have for some time indicated that all three impulses are well nigh spent; and we can expect no fresh start until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that, however true it may be, if it is not fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defense of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to

shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waiving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by anyone, than on the things which concern him so much that it is considered necessary for him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, "Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear anyone deny, and attempt to disprove them." Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts—some geocentric theory instead

of heliocentric, some phlogiston instead of oxygen—and it has to be shown why that other theory cannot be the true one; and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favor some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not still greater, intensity than even his own. What Cicero practiced as the means of forensic success requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never

thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known but to those who have attended equally and impartially to both sides, and endeavored to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skillful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accom-

pany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied: since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and cannot be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognisant of all that they

ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the meaning of the opinion itself. The words which convey it cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they

can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favor. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively; when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it: there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience, until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, incrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the

manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other a set of every-day judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are ill-used by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbor as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But anyone who reminded them that the maxims require an infinity of things which they never even think of

doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power in their minds. They have an habitual respect for the sound of them, but no feeling which spreads from the words to the things signified, and forces the mind to take *them* in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, "See how these Christians love one another" (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since. And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The sayings of Christ coexist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognized sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsayers. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally speaking, of all tra-

ditional doctrines—those of prudence and knowledge of life, as well as of morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion; there are many truths of which the full meaning *cannot* be realized until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of “the deep slumber of a decided opinion.”

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error to enable any to realize the truth? Does a belief cease to be real and vital as soon as it is generally received; and is a proposition never thoroughly understood and felt unless some doubt of it remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths; and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavoring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great question of philosophy and life, directed with consummate skill to the purpose of convincing anyone who had merely adopted the commonplaces of received opinion that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to obtain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence. The school disputations of the Middle Ages had a somewhat similar object. They were intended to

make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the "*Socratici viri*"; but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place either of the one or of the other. A person who derives all his instruction from teachers or books, even if he escape the besetting temptation of contenting himself with cram, is under no compulsion to hear both sides; accordingly it is far from a frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defense of his opinion is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd it is to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice

that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labor for ourselves.

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion consequently true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these: when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjointed from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this, that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial

character of prevailing opinions, even when resting on a true foundation, every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided assertors too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favor; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were: on the contrary, they were nearer to it: they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be

asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other; but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favorable to democracy and to aristocracy, to property and to equality, to co-operation and to completion, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due: one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all sides of

the truth. When there are persons to be found who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, "But *some* received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject, and if anyone teaches a morality which varies from it, he is wholly in error." As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that anyone who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a pre-existing morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a pre-existing morality, namely that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic church of the first five centuries, and though not

implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the Middle Ages, each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it that it is, in many important points, incomplete and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; innocence rather than nobleness; abstinence from evil, rather than energetic pursuit of good; in its precepts (as has been well said) "thou shalt not" predominates unduly over "thou shalt." In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics, that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we

read the maxim—"A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State." What little recognition the idea of obligation to the public obtains in modern morality is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honor, is derived from the purely human, not the religious part of our education, and never could have grown out of a standard of ethics in which the only worth, professedly recognized, is that of obedience.

I am as far as anyone from pretending that these defects are necessarily inherent in the Christian ethics in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this to believe that they contain, and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from

the moral training and instruction which so many well-meaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore coexisted with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule, that in an imperfect state of the human mind the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth

which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil; there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognized the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take some notice of those who say that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offense to those whose opinions are attacked, I think experience testifies that this offense is given whenever the attack is telling and powerful, and that every opponent who pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offenses of the kind are such as it is mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible, on adequate grounds, conscientiously to stamp the misrepresenta-

tion as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is commonly meant by intemperate discussion, namely invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use is greatest when they are employed against the comparatively defenseless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offense of this kind which can be committed by a polemic is to stigmatize those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and un-influential, and nobody but themselves feels much interested in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it with safety to themselves, nor, if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offense, from which they hardly ever deviate even in a slight degree without losing ground; while unmeasured vituperation employed on the side of the prevailing opinion really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity than on religion. It is, however, obvious that law

and authority have no business with restraining either, while opinion ought, in every instance, to determine its verdict by the circumstances of the individual case; condemning everyone, on whichever side of the argument he places himself, in whose mode of advocacy either want of candor, or malignity, bigotry, or intolerance of feeling manifest themselves; but not inferring these vices from the side which a person takes, though it be the contrary side of the question of our own; and giving merited honor to everyone, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells, or can be supposed to tell, in their favor. This is the real morality of public discussion; and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

CHAPTER III

Of Individuality as One of the Elements of Well-Being

Such being the reasons which make it imperative that human beings should be free to form opinions, and to express their opinions without reserve; and such the baneful consequences to the intellectual, and through that to the moral nature of man, unless this liberty is either conceded, or asserted in spite of prohibition; let us next examine whether the same reasons do not require that men should be free to act upon their opinions—to carry these out in their lives, without hindrance, either physical or moral, from their fellow-men, so long as it is at their own risk and peril. This last proviso is of course

indispensable. No one pretends that actions should be as free as opinions. On the contrary, even opinions lose their immunity when the circumstances in which they are expressed are such as to constitute their expression a positive instigation to some mischievous act. An opinion that corn-dealers are starvers of the poor, or that private property is robbery, ought to be unmolested when simply circulated through the press, but may justly incur punishment when delivered orally to an excited mob assembled before the house of a corn-dealer, or when handed about among the same mob in the form of a placard. Acts, of whatever kind, which without justifiable cause do harm to others, may be, and in the more important cases absolutely require to be, controlled by the unfavorable sentiments, and, when needful, by the active interference of mankind. The liberty of the individual must be thus far limited; he must not make himself a nuisance to other people. But if he refrains from molesting others in what concerns them, and merely acts according to his own inclination and judgment in things which concern himself, the same reasons which show that opinion should be free, prove also that he should be allowed, without molestation, to carry his opinions into practice at his own cost. That mankind are not infallible; that their truths, for the most part, are only half-truths; that unity of opinion, unless resulting from the fullest and freest comparison of opposite opinions, is not desirable, and diversity not an evil, but a good, until mankind are much more capable than at present of recognizing all sides of the truth, are principles applicable to men's modes of action, not less than to their opinions. As it is useful that while mankind are imperfect there should be different opinions, so it is that there should be different experiments of living; that free scope should be given to varieties of character, short of injury to others; and that the worth of different modes of life should be proved practically, when anyone thinks fit to try them. It is desirable, in short, that in things which do not primarily concern others, individuality should assert itself. Where not the person's own character, but the traditions or customs of

other people are the rule of conduct, there is wanting one of the principal ingredients of human happiness, and quite the chief ingredient of individual and social progress.

In maintaining this principle, the greatest difficulty to be encountered does not lie in the appreciation of means towards an acknowledged end, but in the indifference of persons in general to the end itself. If it were felt that the free development of individuality is one of the leading essentials of well-being; that it is not only a co-ordinate element with all that is designated by the terms civilization, instruction, education, culture, but is itself a necessary part and condition of all those things; there would be no danger that liberty should be undervalued, and the adjustment of the boundaries between it and social control would present no extraordinary difficulty. But the evil is, that individual spontaneity is hardly recognized by the common modes of thinking as having any intrinsic worth, or deserving any regard on its own account. The majority, being satisfied with the ways of mankind as they now are (for it is they who make them what they are), cannot comprehend why those ways should not be good enough for everybody; and what is more, spontaneity forms no part of the ideal of the majority of moral and social reformers, but is rather looked on with jealousy, as a troublesome and perhaps rebellious obstruction to the general acceptance of what these reformers, in their own judgment, think would be best for mankind. Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm von Humboldt, so eminent both as a *savant* and as a politician, made the text of a treatise—that “the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole;” that, therefore, the object “towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow-men must ever keep their eyes, is the individuality of power and development;” that for this there are two requisites, “freedom, and variety of situations;” and

that from the union of these arise "individual vigor and manifold diversity," which combine themselves in "originality."⁵

Little, however, as people are accustomed to a doctrine like that of Von Humboldt, and surprising as it may be to them to find so high a value attached to individuality, the question, one must nevertheless think, can only be one of degree. No one's idea of excellence in conduct is that people should do absolutely nothing but copy one another. No one would assert that people ought not to put into their mode of life, and into the conduct of their concerns, any impress whatever of their own judgment, or of their own individual character. On the other hand, it would be absurd to pretend that people ought to live as if nothing whatever had been known in the world before they came into it; as if experience had as yet done nothing towards showing that one mode of existence, or of conduct, is preferable to another. Nobody denies that people should be so taught and trained in youth as to know and benefit by the ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught *them*: presumptive evidence, and as such, have a claim to his deference. But in the first place, their experience may be too narrow, or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct, but unsuitable to him. Customs are made for customary circumstances and customary characters, and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him, yet to conform to custom, merely *as* custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human facul-

⁵ *The Sphere and Duties of Government*, from the German of Baron Wilhelm von Humboldt, pp. 11-13.

ties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it is the custom makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it, no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened, by his adopting it; and if the inducements to an act are not such as are consensaneous to his own feelings and character (where affection, or the rights of others, are not concerned) it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

He who lets the world, or his own portion of it, choose his plan of life for him, has no need of any other faculty than the ape-like one of imitation. He who chooses his plan for himself, employs all his faculties. He must use observation to see, reasoning and judgments to foresee, activity to gather materials for decision, discrimination to decide, and when he has decided, firmness and self-control to hold to his deliberate decision. And these qualities he requires and exercises exactly in proportion as the part of his conduct which he determines according to his own judgment and feelings is a large one. It is possible that he might be guided in some good path, and kept out of harm's way, without any of these things. But what will be his comparative worth as a human being? It really is of importance, not only what men do, but also what manner of men they are that do it. Among the works of man which human life is rightly employed in perfecting and beautifying, the first in importance surely is man himself. Supposing it were possible to get houses built, corn grown, battles fought, causes tried, and even churches erected and prayers said, by machinery—by automatons in human form—it would be a considerable loss to exchange for these automatons even the men and women who at present inhabit the more civilized

parts of the world, and who assuredly are but starved specimens of what nature can and will produce. Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

It will probably be conceded that it is desirable people should exercise their understandings, and that an intelligent following of custom, or even occasionally an intelligent deviation from custom, is better than a blind and simply mechanical adhesion to it. To a certain extent it is admitted that our understanding should be our own: but there is not the same willingness to admit that our desires and impulses should be our own likewise; or that to possess impulses of our own, and of any strength, is anything but a peril and a snare. Yet desires and impulses are as much a part of a perfect human being as beliefs and restraints; and strong impulses are only perilous when not properly balanced—when one set of aims and inclinations is developed into strength, while others, which ought to coexist with them, remain weak and inactive. It is not because man's desires are strong that they act ill; it is because their consciences are weak. There is no natural connection between strong impulses and a weak conscience. The natural connection is the other way. To say that one person's desires and feelings are stronger and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good. Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature than of an indolent and impassive one. Those who have most natural feeling are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest self-control. It is through the cultivation of these that society both does its duty and protects its interests; not by rejecting the stuff of

which heroes are made because it knows not how to make them. A person whose desires and impulses are his own—are the expression of his own nature, as it has been developed and modified by his own culture—is said to have a character. One whose desires and impulses are not his own, has no character, no more than a steam-engine has a character. If, in addition to being his own, his impulses are strong, and are under the government of a strong will, he has an energetic character. Whoever thinks that individuality of desires and impulses should not be encouraged to unfold itself, must maintain that society has no need of strong natures—is not the better for containing many persons who have much character—and that a high general average of energy is not desirable.

In some early states of society, these forces might be, and were, too much ahead of the power which society then possessed of disciplining and controlling them. There has been a time when the element of spontaneity and individuality was in excess, and the social principle had a hard struggle with it. The difficulty then was to induce men of strong bodies or minds to pay obedience to any rules which required them to control their impulses. To overcome this difficulty, law and discipline, like the Popes struggling against the Emperors, asserted a power over the whole man, claiming to control all his life in order to control his character—which society had not found any other sufficient means of binding. But society has now fairly got the better of individuality; and the danger which threatens human nature is not the excess, but the deficiency, of personal impulses and preferences. Things are vastly changed since the passions of those who were strong by station or by personal endowment were in a state of habitual rebellion against laws and ordinances, and required to be rigorously chained up to enable the persons within their reach to enjoy any particle of security. In our times, from the highest class of society down to the lowest, everyone lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual or the family do not ask themselves—what do I prefer? or, what would suit my character and dis-

position? or, what would allow the best and highest in me to have fair play, and enable it to grow and thrive? They ask themselves, what is suitable to my position? what is usually done by persons of my station and pecuniary circumstances? or (worse still) what is usually done by persons of a station and circumstances superior to mine? I do not mean that they choose what is customary in preference to what suits their own inclination. It does not occur to them to have any inclination, except for what is customary. Thus the mind itself is bowed to the yoke: even in what people do for pleasure, conformity is the first thing thought of; they like in crowds; they exercise choice only among things commonly done: peculiarity of taste, eccentricity of conduct, are shunned equally with crimes: until by dint of not following their own nature they have no nature to follow: their human capacities are withered and starved: they become incapable of any strong wishes or native pleasures, and are generally without either opinions or feelings of home growth, or properly their own. Now is this, or is it not, the desirable condition of human nature?

It is so, on the Calvinistic theory. According to that, the one great offense of man is self-will. All the good of which humanity is capable is comprised in obedience. You have no choice; thus you must do, and no otherwise: "whatever is not a duty, is a sin." Human nature being radically corrupt, there is no redemption for anyone until human nature is killed within him. To one holding this theory of life, crushing out any of the human faculties, capacities, and susceptibilities, is no evil: man needs no capacity, but that of surrendering himself to the will of God: and if he uses any of his faculties for any other purpose but to do that supposed will more effectually, he is better without them. This is the theory of Calvinism; and it is held, in a mitigated form, by many who do not consider themselves Calvinists; the mitigation consisting in giving a less ascetic interpretation to the alleged will of God; asserting it to be his will that mankind should gratify some of their inclinations; of course not in the manner they themselves prefer, but in the way of obedience, that is, in a way

prescribed to them by authority; and, therefore, by the necessary condition of the case, the same for all.

In some such insidious form there is at present a strong tendency to this narrow theory of life, and to the pinched and hidebound type of human character which it patronizes. Many persons, no doubt, sincerely think that human beings thus cramped and dwarfed are as their Maker designed them to be; just as many have thought that trees are a much finer thing when clipped into pollards, or cut out into figures of animals, than as nature made them. But if it be any part of religion to believe that man was made by a good Being, it is more consistent with that faith to believe that this Being gave all human faculties that they might be cultivated and unfolded, not rooted out and consumed, and that he takes delight in every nearer approach made by his creatures to the ideal conception embodied in them, every increase in any of their capabilities of comprehension, of action, or of enjoyment. There is a different type of human excellence from the Calvinistic: a conception of humanity as having its nature bestowed on it for other purposes than merely to be abnegated. "Pagan self-assertion" is one of the elements of human worth, as well as "Christian self-denial."⁶ There is a Greek idea of self-development, which the Platonic and Christian ideal of self-government blends with, but does not supersede. It may be better to be a John Knox than an Alcibiades, but it is better to be a Pericles than either; nor would a Pericles, if we had one in these days, be without anything good which belonged to John Knox.

It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it, and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation; and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevating feelings, and

⁶ Sterling's *Essays*.

strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to. In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others. There is a greater fullness of life about his own existence, and when there is more life in the units there is more in the mass which is composed of them. As much compression as is necessary to prevent the stronger specimens of human nature from encroaching on the rights of others cannot be dispensed with; but for this there is ample compensation even in the point of view of human development. The means of development which the individual loses by being prevented from gratifying his inclinations to the injury of others, are chiefly obtained at the expense of the development of other people. And even to himself there is a full equivalent in the better development of the social part of his nature, rendered possible by the restraint put upon the selfish part. To be held to rigid rules of justice for the sake of others, develops the feelings and capacities which have the good of others for their object. But to be restrained in things not affecting their good, by their mere displeasure, develops nothing valuable, except such force of character as may unfold itself in resisting the restraint. If acquiesced in, it dulls and blunts the whole nature. To give any fair play to the nature of each, it is essential that different persons should be allowed to lead different lives. In proportion as this latitude has been exercised in any age, has that age been noteworthy to posterity. Even despotism does not produce its worst effects, so long as individuality exists under it; and whatever crushes individuality is despotism, by whatever name it may be called, and whether it professes to be enforcing the will of God or the injunctions of men.

Having said that the individuality is the same thing with development, and that it is only the cultivation of individuality which produces, or can produce, well-developed human beings, I might here close the argument: for what more or better can be said of any condition of human affairs than that it brings human beings themselves nearer to the best thing

they can be? or what worse can be said of any obstruction to good than that it prevents this? Doubtless, however, these considerations will not suffice to convince those who most need convincing; and it is necessary further to show that these developed human beings are of some use to the undeveloped—to point out to those who do not desire liberty, and would not avail themselves of it, that they may be in some intelligible manner rewarded for allowing other people to make use of it without hindrance.

In the first place, then, I would suggest that they might possibly learn something from them. It will not be denied by anybody that originality is a valuable element in human affairs. There is always need of persons not only to discover new truths, and point out when what were once truths are true no longer, but also to commence new practices, and set the example of more enlightened conduct, and better taste and sense in human life. This cannot well be gainsaid by anybody who does not believe that the world has already attained perfection in all its ways and practices. It is true that this benefit is not capable of being rendered by everybody alike: there are but few persons, in comparison with the whole of mankind, whose experiments, if adopted by others, would be likely to be any improvement on established practice. But these few are the salt of the earth; without them, human life would become a stagnant pool. Not only is it they who introduce good things which did not before exist; it is they who keep the life in those which already exist. If there were nothing new to be done, would human intellect cease to be necessary? Would it be a reason why those who do the old things should forget why they are done, and do them like cattle, not like human beings? There is only too great a tendency in the best beliefs and practices to degenerate into the mechanical; and unless there were a succession of persons whose ever-recurring originality prevents the grounds of those beliefs and practices from becoming merely traditional, such dead matter would not resist the smallest shock from anything really alive, and there would be no reason why civilization should not die out, as in the Byzantine Empire. Persons of

genius, it is true, are, and are always likely to be, a small minority; but in order to have them, it is necessary to preserve the soil in which they grow. Genius can only breathe freely in an *atmosphere* of freedom. Persons of genius are, *ex vi termini*, more individual than any other people—less capable, consequently, of fitting themselves, without hurtful compression, into any of the small number of molds which society provides in order to save its members the trouble of forming their own character. If from timidity they consent to be forced into one of these molds, and to let all that part of themselves which cannot expand under the pressure remain unexpanded, society will be little the better for their genius. If they are of a strong character, and break their fetters, they become a mark for the society which has not succeeded in reducing them to commonplace, to point out with solemn warning as “wild,” “erratic,” and the like; much as if one should complain of the Niagara river for not flowing smoothly between its banks like a Dutch canal.

I insist thus emphatically on the importance of genius, and the necessity of allowing it to unfold itself freely both in thought and in practice, being well aware that no one will deny the position in theory, but knowing also that almost everyone, in reality, is totally indifferent to it. People think genius a fine thing if it enables a man to write an exciting poem, or paint a picture. But in its true sense, that of originality in thought and action, though no one says that it is not a thing to be admired, nearly all, at heart, think that they can do very well without it. Unhappily this is too natural to be wondered at. Originality is the one thing which unoriginal minds cannot feel the use of. They cannot see what it is to do for them: how should they? If they could see what it would do for them, it would not be originality. The first service which originality has to render them, is that of opening their eyes: which being once fully done, they would have a chance of being themselves original. Meanwhile, recollecting that nothing was ever yet done which someone was not the first to do, and that all good things which exist are the fruits of originality, let them be modest enough to believe

that there is something still left for it to accomplish, and assure themselves that they are more in need of originality, the less they are conscious of the want.

In sober truth, whatever homage may be professed, or even paid, to real or supposed mental superiority, the general tendency of things throughout the world is to render mediocrity the ascendant power among mankind. In ancient history, in the Middle Ages, and in a diminishing degree through the long transition from feudality to the present time, the individual was a power in himself; and if he had either great talents or a high social position, he was a considerable power. At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as is public transactions. Those whose opinions go by the name of public opinion are not always the same sort of public: in America they are the whole white population; in England, chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is a still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers. I am not complaining of all this. I do not assert that anything better is compatible, as a general rule, with the present low state of the human mind. But that does not hinder the government of mediocrity from being mediocre government. No government by a democracy or a numerous aristocracy, either in its political arts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign. Many have let themselves be guided (which in their best times they always have done) by the counsels and influence of a more highly gifted and instructed one or few. The initiation of all wise or noble things comes and must come

from individuals; generally at first from some one individual. The honor and glory of the average man is that he is capable of following that initiative; that he can respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of "hero-worship" which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not only differently but better. In this age, the mere example of nonconformity, the mere refusal to bend the knee to custom, is itself a service. Precisely because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has generally been proportional to the amount of genius, mental vigor, and the moral courage it contained. That so few now dare to be eccentric marks the chief danger of the time.

I have said that it is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs. But independence of action, and disregard of custom, are not solely deserving of encouragement for the chance they afford that better modes of action, and customs more worthy of general adoption, may be struck out; nor is it only persons of decided mental superiority who have a just claim to carry on

their lives in their own way. There is no reason that all human existence should be constructed on some one or some small number of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are not like sheep; and even sheep are not undistinguishably alike. A man cannot get a coat or a pair of boots to fit him unless they are either made to his measure, or he has a whole warehouseful to choose from: and is it easier to fit him with a life than with a coat, or are human beings more like one another in their whole physical and spiritual conformation than in the shape of their feet? If it were only that people have diversities of taste, that is reason enough for not attempting to shape them all after one model. But different persons also require different conditions for their spiritual development; and can no more exist healthily in the same moral, than all the variety of plants can in the same physical, atmosphere and climate. The same things which are helps to one person towards the cultivation of his higher nature are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burden, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and aesthetic stature of which their nature is capable. Why then should tolerance, as far as the public sentiment is concerned, extend only to tastes and modes of life which extort acquiescence by the multitude of their adherents? Nowhere (except in some monastic institutions) is diversity of taste entirely unrecognized; a person may, without blame, either like or dislike rowing, or smoking, or music, or athletic exercises, or chess, or cards, or study, because both those who like each of these

things, and those who dislike them, are too numerous to be put down. But the man, and still more the woman, who can be accused either of doing "what nobody does," or of not doing "what everybody does," is the subject of as much depreciatory remark as if he or she had committed some grave moral delinquency. Persons require to possess a title or some other badge of rank, or of the consideration of people of rank, to be able to indulge somewhat in the luxury of doing as they like without detriment of their estimation. To indulge somewhat, I repeat: for whoever allow themselves much of that indulgence, incur the risk of something worse than disparaging speeches—they are in peril of a commission *de lunatico*, and of having their property taken from them and given to their relations.

There is one characteristic of the present direction of public opinion peculiarly calculated to make it intolerant of any marked demonstration of individuality. The general average of mankind are not only moderate in intellect, but also moderate in inclinations: they have no tastes or wishes strong enough to incline them to do anything unusual, and they consequently do not understand those who have, and class all such with the wild and intemperate whom they are accustomed to look down upon. Now, in addition to this fact which is general, we have only to suppose that a strong movement has set in towards the improvement of morals, and it is evident what we have to expect. In these days such a movement has set in; much has actually been effected in the way of increased regularity of conduct and discouragement of excesses; and there is a philanthropic spirit abroad, for the exercise of which there is no more inviting field than the moral and prudential improvement of our fellow-creatures. These tendencies of the times cause the public to be more disposed than at most former periods to prescribe general rules of conduct, and endeavor to make everyone conform to the approved standard. And that standard, express or tacit, is to desire nothing strongly. Its ideal of character is to be without any marked character; to maim by compression, like a Chi-

nese lady's foot, every part of human nature which stands out prominently, and tends to make the person markedly dissimilar in outline to commonplace humanity.

As is usually the case with ideals which exclude one-half of what is desirable, the present standard of approbation produces only an inferior imitation of the other half. Instead of great energies guided by vigorous reason, and strong feelings strongly controlled by a conscientious will, its result is weak feelings and weak energies, which therefore can be kept in outward conformity to rule without any strength either of will or of reason. Already energetic characters on any large scale are becoming merely traditional. There is now scarcely any outlet for energy in this country except business. The energy expended in this may still be regarded as considerable. What little is left from that employment is expended on some hobby; which may be a useful, even a philanthropic hobby, but is always some one thing, and generally a thing of small dimensions. The greatness of England is now all collective; individually small, we only appear capable of anything great by our habit of combining; and with this our moral and religious philanthropists are perfectly contented. But it was men of another stamp than this that made England what it has been; and men of another stamp will be needed to prevent its decline.

The despotism of custom is everywhere the standing hindrance to human advancement, being in unceasing antagonism to that disposition to aim at something better than customary, which is called, according to circumstances, the spirit of liberty, or that of progress or improvement. The spirit of improvement is not always a spirit of liberty, for it may aim at forcing improvements on an unwilling people; and the spirit of liberty, in so far as it resists such attempts, may ally itself locally and temporarily with the opponents of improvement; but the only unfailing and permanent source of improvement is liberty, since by it there are as many possible independent centers of improvement as there are individuals. The progressive principle, however, in either shape, whether as the love of liberty or of improvement, is antagonistic to the sway of

custom, involving at least emancipation from that yoke; and the contest between the two constitutes the chief interest of the history of mankind. The greater part of the world has, properly speaking, no history, because the despotism of custom is complete. This is the case over the whole East. Custom is there, in all things, the final appeal; justice and right mean conformity to custom; the argument of custom no one, unless some tyrant intoxicated with power, thinks of resisting. And we see the result. Those nations must once have had originality; they did not start out on the ground populous, lettered, and versed in many of the arts of life; they made themselves all this, and were then the greatest and most powerful nations of the world. What are they now? The subjects or dependents of tribes whose forefathers wandered in the forests when theirs had magnificent palaces and gorgeous temples, but over whom custom exercised only a divided rule with liberty and progress. A people, it appears, may be progressive for a certain length of time, and then stop: when does it stop? When it ceases to possess individuality. If a similar change should befall the nations of Europe, it will not be in exactly the same shape: the despotism of custom with which these nations are threatened is not precisely stationariness. It proscribes singularity, but it does not preclude change, provided all change together. We have discarded the fixed costumes of our forefathers; everyone must still dress like other people, but the fashion may change once or twice a year. We thus take care that when there is a change, it shall be for change's sake, and not from any idea of beauty or convenience; for the same idea of beauty or convenience would not strike all the world at the same moment, and be simultaneously thrown aside by all at another moment. But we are progressive as well as changeable: we continually make new inventions in mechanical things, and keep them until they are again superseded by better; we are eager for improvement in politics, in education, even in morals, though in this last our idea of improvement chiefly consists in persuading or forcing other people to be as good as ourselves. It is not progress that we object to; on the contrary, we flatter ourselves that we are the most pro-

gressive people who ever lived. It is individuality that we war against: we should think we had done wonders if we had made ourselves all alike; forgetting that the unlikeness of one person to another is generally the first thing which draws the attention of either to the imperfection of his own type, and the superiority of another, or the possibility, by combining the advantages of both, of producing something better than either. We have a warning example in China—a nation of much talent, and, in some respects, even wisdom, owing to the rare good fortune of having been provided at an early period with a particularly good set of customs, the work, in some measure, of men to whom even the most enlightened European must accord, under certain limitations, the title of sages and philosophers. They are remarkable, too, in the excellence of their apparatus for impressing, as far as possible, the best wisdom they possess upon every mind in the community, and securing that those who have appropriated most of it shall occupy the posts of honor and power. Surely the people who did this have discovered the secret of human progressiveness, and must have kept themselves steadily at the head of the movement of the world. On the contrary, they have become stationary—have remained so for thousands of years; and if they are ever to be farther improved, it must be by foreigners. They have succeeded beyond all hope in what English philanthropists are so industriously working at—in making a people all alike, all governing their thoughts and conduct by the same maxims and rules; and these are the fruits. The modern regime of public opinion is, in an unorganized form, what the Chinese educational and political systems are in an organized; and unless individuality shall be able successfully to assert itself against this yoke, Europe, notwithstanding its noble antecedents and its professed Christianity, will tend to become another China.

What is it that has hitherto preserved Europe from this lot? What has made the European family of nations an improving, instead of a stationary portion of mankind? Not any superior excellence in them, which, when it exists, exists as the effect not as the cause; but their remarkable diversity of character

and culture. Individuals, classes, nations, have been extremely unlike one another: they have struck out a great variety of paths, each leading to something valuable; and although at every period those who traveled in different paths have been intolerant of one another, and each would have thought it an excellent thing if all the rest could have been compelled to travel his road, their attempts to thwart each other's development have rarely had any permanent success, and each has in time endured to receive the good which the others have offered. Europe is, in my judgment, wholly indebted to this plurality of paths for its progressive and many-sided development. But it already begins to possess this benefit in a considerably less degree. It is decidedly advancing towards the Chinese ideal of making all people alike. M. de Tocqueville, in his last important work, remarks how much more the Frenchmen of the present day resemble one another than did those even of the last generation. The same remark might be made of Englishmen in a far greater degree. In a passage already quoted from Wilhelm von Humboldt, he points out two things as necessary conditions of human development, because necessary to render people unlike one another: namely, freedom, and variety of situations. The second of these two conditions is in this country every day diminishing. The circumstances which surround different classes and individuals, and shape their characters, are daily becoming more assimilated. Formerly, different ranks, different neighborhoods, different trades and professions, lived in what might be called different worlds; at present to a great degree in the same. Comparatively speaking, they now read the same things, listen to the same things, see the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them. Great as are the differences of position which remain, they are nothing to those which have ceased. And the assimilation is still proceeding. All the political changes of the age promote it, since they all tend to raise the low and to lower the high. Every extension of education promotes it, because education brings people under common influences,

and gives them access to the general stock of facts and sentiments. Improvement in the means of communication promotes it, by bringing the inhabitants of distant places into personal contact, and keeping up a rapid flow of changes of residence between one place and another. The increase of commerce and manufactures promotes it, by diffusing more widely the advantages of easy circumstances, and opening all objects of ambition, even the highest, to general competition, whereby the desire of rising becomes no longer the character of a particular class, but of all classes. A more powerful agency than even all these, in bringing about a general similarity among mankind, is the complete establishment, in this and other free countries, of the ascendancy of public opinion in the State. As the various social eminences which enabled persons entrenched on them to disregard the opinion of the multitude gradually become leveled; as the very idea of resisting the will of the public, when it is positively known that they have a will, disappears more and more from the minds of practical politicians: there ceases to be any social support for nonconformity—any substantive power in society which, itself opposed to the ascendancy of numbers, is interested in taking under its protection opinions and tendencies at variance with those of the public.

The combination of all these causes forms so great a mass of influences hostile to individuality, that it is not easy to see how it can stand its ground. It will do so with increasing difficulty, unless the intelligent part of the public can be made to feel its value—to see that it is good there should be differences, even though not for the better, even though, as it may appear to them, some should be for the worse. If the claims of individuality are ever to be asserted, the time is now, while much is still wanting to complete the enforced assimilation. It is only in the earlier stages that any stand can be successfully made against the encroachment. The demand that all other people shall resemble ourselves grows by what it feeds on. If resistance waits till life is reduced *nearly* to one uniform type, all deviations from that type will come to be considered impious, immoral, even monstrous and contrary to

nature. Mankind speedily become unable to conceive diversity, when they have been for some time unaccustomed to see it.

CHAPTER IV

*Of the Limits to the Authority of Society
over the Individual*

What, then, is the rightful limit to the sovereignty of the individual over himself? Where does the authority of society begin? How much of human life should be assigned to individuality, and how much to society?

Each will receive its proper share, if each has that which more particularly concerns it. To individuality should belong the part of life in which it is chiefly the individual that is interested; to society, the part which chiefly interests society.

Though society is not founded on a contract, and though no good purpose is answered by inventing a contract in order to deduce social obligations from it, everyone who receives the protection of society owes a return for the benefit, and the fact of living in society renders it indispensable that each should be bound to observe a certain line of conduct towards the rest. This conduct consists, *first*, in not injuring the interests of one another; or rather certain interests, which, either by express legal provision or by tacit understanding, ought to be considered as rights; and *secondly*, in each person's bearing his share (to be fixed on some equitable principle) of the labors and sacrifices incurred for defending the society or its members from injury and molestation. These conditions society is justified in enforcing, at all costs to those who endeavor to withhold fulfillment. Nor is this all that society may do. The acts of an individual may be hurtful to others, or wanting in due consideration for their welfare, without

going to the length of violating any of their constituted rights. The offender may then be justly punished by opinion, though not by law. As soon as any part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will or will not be promoted by interfering with it, becomes open to discussion. But there is no room for entertaining any such question when a person's conduct affects the interests of no persons besides himself, or need not affect them unless they like (all the persons concerned being of full age, and the ordinary amount of understanding). In all such cases, there should be perfect freedom, legal and social, to do the action and stand the consequences.

It would be a great misunderstanding of this doctrine to suppose that it is one of selfish indifference, which pretends that human beings have no business with each other's conduct in life, and that they should not concern themselves about the well-doing or well-being of one another, unless their own interest is involved. Instead of any diminution, there is need of a great increase of disinterested exertion to promote the good of others. But disinterested benevolence can find other instruments to persuade people to their good than whips and scourges, either of the literal or the metaphorical sort. I am the last person to undervalue the self-regarding virtues: they are only second in importance, if even second, to the social. It is equally the business of education to cultivate both. But even education works by conviction and persuasion as well as by compulsion, and it is by the former only that, when the period of education is passed, the self-regarding virtues should be inculcated. Human beings owe to each other help to distinguish the better from the worse, and encouragement to choose the former and avoid the latter. They should be forever stimulating each other to increased exercise of their higher faculties, and increased direction of their feelings and aims towards wise instead of foolish, elevating instead of degrading, objects and contemplations. But neither one person, nor any number of persons, is warranted in saying to another human creature of ripe years, that he shall not do with his life

for his own benefit what he chooses to do with it. He is the person most interested in his own well-being: the interest which any other person, except in cases of strong personal attachment, can have in it, is trifling, compared with that which he himself has; the interest which society has in him individually (except as to his conduct to others) is fractional, and altogether indirect; while with respect to his own feelings and circumstances, the most ordinary man or woman has means of knowledge immeasurably surpassing those that can be possessed by anyone else. The interference of society to overrule his judgment and purposes in what only regards himself must be grounded on general presumptions; which may be altogether wrong, and even if right, are as likely as not to be misapplied to individual cases, by persons no better acquainted with the circumstances of such cases than those are who look at them merely from without. In this department, therefore, of human affairs, individuality has its proper field of action. In the conduct of human beings towards one another it is necessary that general rules should for the most part be observed, in order that people may know what they have to expect; but in each person's own concerns his individual spontaneity is entitled to free exercise. Considerations to aid his judgment, exhortations to strengthen his will, may be offered to him, even obtruded on him, by others: but he himself is the final judge. All errors which he is likely to commit against advice and warning are far outweighed by the evil of allowing others to constrain him to what they deem his good.

I do not mean that the feelings with which a person is regarded by others ought not to be in any way affected by his self-regarding qualities or deficiencies. This is neither possible nor desirable. If he is eminent in any of the qualities which conduce to his own good, he is, so far, a proper object of admiration. He is so much the nearer to the ideal perfection of human nature. If he is grossly deficient in those qualities, a sentiment the opposite of admiration will follow. There is a degree of folly, and a degree of what may be called (though the phrase is not unobjectionable) lowness or depravation of

taste, which, though it cannot justify doing harm to the person who manifests it, renders him necessarily and properly a subject of distaste, or, in extreme cases, even of contempt: a person could not have the opposite qualities in due strength without entertaining these feelings. Though doing no wrong to anyone, a person may so act as to compel us to judge him, and feel to him, as a fool, or as a being of an inferior order; and since this judgment and feeling are a fact which he would prefer to avoid, it is doing him a service to warn him of it beforehand, as of any other disagreeable consequence to which he exposes himself. It would be well, indeed, if this good office were much more freely rendered than the common notions of politeness at present permit, and if one person could honestly point out to another that he thinks him in fault, without being considered unmannerly or presuming. We have a right, also, in various ways, to act upon our unfavorable opinion of anyone, not to the oppression of his individuality, but in the exercise of ours. We are not bound, for example, to seek his society; we have a right to avoid it (though not to parade the avoidance), for we have a right to choose the society most acceptable to us. We have a right, and it may be our duty, to caution others against him, if we think his example or conversation likely to have a pernicious effect on those with whom he associates. We may give others a preference over him in optional good offices, except those which tend to his improvement. In these various modes a person may suffer very severe penalties at the hands of others for faults which directly concern only himself; but he suffers these penalties only in so far as they are the natural and, as it were, the spontaneous consequences of the faults themselves, not because they are purposely inflicted on him for the sake of punishment. A person who shows rashness, obstinacy, self-conceit—who cannot live within moderate means—who cannot restrain himself from hurtful indulgences—who pursues animal pleasures at the expense of those of feeling and intellect—must expect to be lowered in the opinion of others, and to have a less share of their favorable sentiments; but of this he has no right to complain, unless he has

merited their favor by special excellence in his social relations, and has thus established a title to their good offices, which is not affected by his demerits towards himself.

What I contend for is, that the inconveniences which are strictly inseparable from the unfavorable judgment of others, are the only ones to which a person should ever be subjected for that portion of his conduct and character which concerns his own good, but which does not affect the interest of others in their relations with him. Acts injurious to others require a totally different treatment. Encroachment on their rights; infliction on them of any loss or damage not justified by his own rights; falsehood or duplicity in dealing with them; unfair or ungenerous use of advantages over them; even selfish abstinence from defending them against injury—these are fit objects of moral reprobation, and, in grave cases, of moral retribution and punishment. And not only these acts, but the dispositions which lead to them, are properly immoral, and fit subjects of disapprobation which may rise to abhorrence. Cruelty of disposition; malice and ill-nature; that most anti-social and odious of all passions, envy; dissimulation and insincerity, irascibility on insufficient cause, and resentment disproportioned to the provocation; the love of domineering over others; the desire to engross more than one's share of advantages (the *πλεονεξία* of the Greeks); the pride which derives gratification from the abasement of others; the egotism which thinks self and its concerns more important than everything else, and decides all doubtful questions in its own favor;—these are moral vices, and constitute a bad and odious moral character: unlike the self-regarding faults previously mentioned, which are not properly immoralities, and to whatever pitch they may be carried, do not constitute wickedness. They may be proofs of any amount of folly, or want of personal dignity and self-respect; but they are only a subject of moral reprobation when they involve a breach of duty to others, for whose sake the individual is bound to have care for himself. What are called duties to ourselves are not socially obligatory, unless circumstances render them at the same time duties to others. The term "duty to oneself," when

it means anything more than prudence, means self-respect or self-development, and for none of these is anyone accountable to his fellow-creatures, because for none of them is it for the good of mankind that he be held accountable to them.

The distinction between the loss of consideration which a person may rightly incur by defect of prudence or of personal dignity, and the reprobation which is due to him for an offense against the rights of others, is not a merely nominal distinction. It makes a vast difference both in our feelings and in our conduct towards him whether he displeases us in things in which we think we have a right to control him, or in things in which we know that we have not. If he displeases us, we may express our distaste, and we may stand aloof from a person as well as from a thing that displeases us; but we shall not therefore feel called on to make his life uncomfortable. We shall reflect that he already bears, or will bear, the whole penalty of his error; if he spoils his life by mismanagement, we shall not, for that reason, desire to spoil it still further: instead of wishing to punish him, we shall rather endeavor to alleviate his punishment, by showing him how he may avoid or cure the evils his conduct tends to bring upon him. He may be to us an object of pity, perhaps of dislike, but not of anger or resentment; we shall not treat him like an enemy of society: the worst we shall think ourselves justified in doing is leaving him to himself, if we do not interfere benevolently by showing interest or concern for him. It is far otherwise if he has infringed the rules necessary for the protection of his fellow-creatures, individually or collectively. The evil consequences of his acts do not then fall on himself, but on others; and society, as the protector of all its members, must retaliate on him; must inflict pain on him for the express purpose of punishment, and must take care that it be sufficiently severe. In the one case, he is an offender at our bar, and we are called on not only to sit in judgment on him, but, in one shape or another, to execute our own sentence: in the other case, it is not our part to inflict any suffering on him, except what may incidentally follow from our using the same liberty in the regulation of our own affairs, which we allow to him in his.

The distinction here pointed out between the part of a person's life which concerns only himself, and that which concerns others, many persons will refuse to admit. How (it may be asked) can any part of the conduct of a member of society be a matter of indifference to the other members? No person is an entirely isolated being; it is impossible for a person to do anything seriously or permanently hurtful to himself, without mischief reaching at least to his near connections, and often far beyond them. If he injures his property, he does harm to those who directly or indirectly derived support from it, and usually diminishes, by a greater or less amount, the general resources of the community. If he deteriorates his bodily or mental faculties, he not only brings evil upon all who depended on him for any portion of their happiness, but disqualifies himself for rendering the services which he owes to his fellow-creatures generally; perhaps becomes a burden on their affection or benevolence; and if such conduct were very frequent, hardly an offense that is committed would detract more from the general sum of good. Finally, if by his vices or follies a person does no direct harm to others, he is nevertheless (it may be said) injurious by his example; and ought to be compelled to control himself, for the sake of those whom the sight or knowledge of his conduct might corrupt or mislead.

And even (it will be added) if the consequences of misconduct could be confined to the vicious or thoughtless individual, ought society to abandon to their own guidance those who are manifestly unfit for it? If protection against themselves is confessedly due to children and persons under age, is not society equally bound to afford it to persons of mature years who are equally incapable of self-government? If gambling, or drunkenness, or incontinence, or idleness, or uncleanness, are as injurious to happiness, and as great a hindrance to improvement, as many or most of the acts prohibited by law, why (it may be asked) should not law, so far as is consistent with practicability and social convenience, endeavor to repress these also? And as a supplement to the unavoidable imperfections of law, ought not opinion at least to

organize a powerful police against these vices, and visit rigidly with social penalties those who are known to practice them? There is no question here (it may be said) about restricting individuality, or impeding the trial of new and original experiments in living. The only things it is sought to prevent are things which have been tried and condemned from the beginning of the world until now; things which experience has shown not to be useful or suitable to any person's individuality. There must be some length of time and amount of experience after which a moral or prudential truth may be regarded as established: and it is merely desired to prevent generation after generation from falling over the same precipice which has been fatal to their predecessors.

I fully admit that the mischief which a person does to himself may seriously affect, both through their sympathies and their interests, those nearly connected with him and, in a minor degree, society at large. When, by conduct of this sort, a person is led to violate a distinct and assignable obligation to any other person or persons, the case is taken out of the self-regarding class, and becomes amenable to moral disapprobation in the proper sense of the term. If, for example, a man, through intemperance or extravagance, becomes unable to pay his debts, or, having undertaken the moral responsibility of a family, becomes from the same cause incapable of supporting or educating them, he is deservedly reprobated, and might be justly punished; but it is for the breach of duty to his family or creditors, not for the extravagance. If the resources which ought to have been devoted to them, had been diverted from them for the most prudent investment, the moral culpability would have been the same. George Barnwell murdered his uncle to get money for his mistress, but if he had done it to set himself up in business, he would equally have been hanged. Again, in the frequent case of a man who causes grief to his family by addiction to bad habits, he deserves reproach for his unkindness or ingratitude; but so he may for cultivating habits not in themselves vicious, if they are painful to those with whom he passes his life, or who from personal ties are dependent on him for their comfort.

Whoever fails in the consideration generally due to the interests and feelings of others, not being compelled by some more imperative duty, or justified by allowable self-preference, is a subject of moral disapprobation for that failure, but not for the cause of it, nor for the errors, merely personal to himself, which may have remotely led to it. In like manner, when a person disables himself, by conduct purely self-regarding, from the performance of some definite duty incumbent on him to the public, he is guilty of a social offense. No person ought to be punished simply for being drunk; but a soldier or a policeman should be punished for being drunk on duty. Whenever, in short, there is a definite damage, or a definite risk of damage, either to an individual or to the public, the case is taken out of the province of liberty, and placed in that of morality or law.

But with regard to the merely contingent, or, as it may be called, constructive injury which a person causes to society, by conduct which neither violates any specific duty to the public, nor occasions perceptible hurt to any assignable individual except himself, the inconvenience is one which society can afford to bear, for the sake of the greater good of human freedom. If grown persons are to be punished for not taking proper care of themselves, I would rather it were for their own sake, than under pretense of preventing them from impairing their capacity of rendering to society benefits which society does not pretend it has a right to exact. But I cannot consent to argue the point as if society had no means of bringing its weaker members up to its ordinary standard of rational conduct, except waiting till they do something irrational, and then punishing them, legally or morally, for it. Society has had absolute power over them during all the early portion of their existence: it has had the whole period of childhood and nonage in which to try whether it could make them capable of rational conduct in life. The existing generation is master both of the training and the entire circumstances of the generation to come; it cannot indeed make them perfectly wise and good, because it is itself so lamentably deficient in goodness and wisdom; and its best efforts

are not always, in individual cases, its most successful ones; but it is perfectly well able to make the rising generation, as a whole, as good as, and a little better than, itself. If society lets any considerable number of its members grow up mere children, incapable of being acted on by rational consideration of distant motives, society has itself to blame for the consequences. Armed not only with all the powers of education, but with the ascendancy which the authority of a received opinion always exercises over the minds who are least fitted to judge for themselves; and aided by the *natural* penalties which cannot be prevented from falling on those who incur the distaste or the contempt of those who know them; let not society pretend that it needs, besides all this, the power to issue commands and enforce obedience in the personal concerns of individuals, in which, on all principles of justice and policy, the decision ought to rest with those who are to abide the consequences. Nor is there anything which tends more to discredit and frustrate the better means of influencing conduct than a resort to the worse. If there be among those whom it is attempted to coerce into prudence or temperance any of the material of which vigorous and independent characters are made, they will infallibly rebel against the yoke. No such person will ever feel that others have a right to control him in his concerns, such as they have to prevent him from injuring them in theirs; and it easily comes to be considered a mark of spirit and courage to fly in the face of such usurped authority, and do with ostentation the exact opposite of what it enjoins; as in the fashion of grossness which succeeded, in the time of Charles II, to the fanatical moral intolerance of the Puritans. With respect to what is said of the necessity of protecting society from the bad example set to others by the vicious or the self-indulgent, it is true that bad example may have a pernicious effect, especially the example of doing wrong to others with impunity to the wrong-doer. But we are now speaking of conduct which, while it does no wrong to others, is supposed to do great harm to the agent himself: and I do not see how those who believe this can think otherwise than that the example, on the whole, must be more salu-

tary than hurtful; since, if it displays the misconduct, it displays also the painful or degrading consequences which, if the conduct is justly censured, must be supposed to be in all or most cases attendant on it.

But the strongest of all the arguments against the interference of the public with purely personal conduct is that, when it does interfere, the odds are that it interferes wrongly, and in the wrong place. On questions of social morality, of duty to others, the opinion of the public, that is, of an overruling majority, though often wrong, is likely to be still oftener right; because on such questions they are only required to judge of their own interests; of the manner in which some mode of conduct, if allowed to be practiced, would affect themselves. But the opinion of a similar majority, imposed as a law on the minority, on questions of self-regarding conduct, is quite as likely to be wrong as right; for in these cases public opinion means, at the best, some people's opinion of what is good or bad for other people; while very often it does not even mean that; the public, with the most perfect indifference, passing over the pleasure or convenience of those whose conduct they censure, and considering only their own preference. There are many who consider as an injury to themselves any conduct which they have a distaste for, and resent it as an outrage to their feelings; as a religious bigot, when charged with disregarding the religious feelings of others, has been known to retort that they disregard his feelings, by persisting in their abominable worship or creed. But there is no parity between the feeling of a person for his own opinion, and the feeling of another who is offended at his holding it; no more than between the desire of a thief to take a purse, and the desire of the right owner to keep it. And a person's taste is as much his own peculiar concern as his opinion or his purse. It is easy for anyone to imagine an ideal public which leaves the freedom and choice of individuals in all uncertain matters undisturbed, and only requires them to abstain from modes of conduct which universal experience has condemned. But where has there been seen a public which set any such limit to its censorship? or when does the public

trouble itself about universal experience? In its interferences with personal conduct it is seldom thinking of anything but the enormity of acting or feeling differently from itself; and this standard of judgment, thinly disguised, is held up to mankind as the dictate of religion and philosophy, by nine-tenths of all moralists and speculative writers. These teach that things are right because they are right; because we feel them to be so. They tell us to search in our own minds and hearts for laws of conduct binding on ourselves and on all others. What can the poor public do but apply these instructions, and make their own personal feelings of good and evil, if they are tolerably unanimous in them, obligatory on all the world?

The evil here pointed out is not one which exists only in theory; and it may perhaps be expected that I should specify the instances in which the public of this age and country improperly invests its own preferences with the character of moral laws. I am not writing an essay on the aberrations of existing moral feeling. That is too weighty a subject to be discussed parenthetically, and by way of illustration. Yet examples are necessary to show that the principle I maintain is of serious and practical moment, and that I am not endeavoring to erect a barrier against imaginary evils. And it is not difficult to show, by abundant instances, that to extend the bounds of what may be called moral police, until it encroaches on the most unquestionably legitimate liberty of the individual, is one of the most universal of all human propensities.

As a first instance, consider the antipathies which men cherish on no better grounds than that persons whose religious opinions are different from theirs do not practice their religious observances, especially their religious abstinences. To cite a rather trivial example, nothing in the creed or practice of Christians does more to envenom the hatred of Mohammedans against them than the fact of their eating pork. There are few acts which Christians and Europeans regard with more unaffected disgust than Mussulmans regard this particular mode of satisfying hunger. It is, in the first place, an of-

fense against their religion; but this circumstance by no means explains either the degree or the kind of their repugnance; for wine also is forbidden by their religion, and to partake of it is by all Mussulmans accounted wrong, but not disgusting. Their aversion to the flesh of the "unclean beast" is, on the contrary, of that peculiar character, resembling an instinctive antipathy, which the idea of uncleanness, when once it thoroughly sinks into the feelings, seems always to excite even in those whose personal habits are anything but scrupulously cleanly, and of which the sentiment of religious impurity, so intense in the Hindoos, is a remarkable example. Suppose now that in a people, of whom the majority were Mussulmans, that majority should insist upon not permitting pork to be eaten within the limits of the country. This would be nothing new in Mohammedan countries.⁷

Would it be a legitimate exercise of the moral authority of public opinion? and if not, why not? The practice is really revolting to such a public. They also sincerely think that it is forbidden and abhorred by the Deity. Neither could the prohibition be censured as religious persecution. It might be religious in its origin, but it would not be persecution for religion, since nobody's religion makes it a duty to eat pork. The only tenable ground of condemnation would be that with the personal tastes and self-regarding concerns of individuals the public has no business to interfere.

To come somewhat nearer home: the majority of Spaniards

⁷ The case of the Bombay Parsees is a curious instance in point. When this industrious and enterprising tribe, the descendants of the Persian fire-worshippers, flying from their native country before the Caliphs, arrived in Western India, they were admitted to toleration by the Hindoo sovereigns, on condition of not eating beef. When those regions afterwards fell under the dominion of Mohammedan conquerors, the Parsees obtained from them a continuance of indulgence, on condition of refraining from pork. What was at first obedience to authority became a second nature, and the Parsees to this day abstain both from beef and pork. Though not required by their religion, the double abstinence has had time to grow into a custom of their tribe; and custom, in the East, is a religion.

consider it a gross impiety, offensive in the highest degree to the Supreme Being, to worship him in any other manner than the Roman Catholic; and no other public worship is lawful on Spanish soil. The people of all Southern Europe look upon a married clergy as not only irreligious, but unchaste, indecent, gross, disgusting. What do Protestants think of these perfectly sincere feelings, and of the attempt to enforce them against non-Catholics? Yet, if mankind are justified in interfering with each other's liberty in things which do not concern the interests of others, on what principle is it possible consistently to exclude these cases? or who can blame people for desiring to suppress what they regard as a scandal in the sight of God and man? No stronger case can be shown for prohibiting anything which is regarded as a personal immorality, than is made out for suppressing these practices in the eyes of those who regard them as impieties; and unless we are willing to adopt the logic of persecutors, and to say that we may persecute others because we are right, and that they must not persecute us because they are wrong, we must beware of admitting a principle of which we should resent as a gross injustice the application to ourselves.

The preceding instances may be objected to, although unreasonably, as drawn from contingencies impossible among us: opinion, in this country, not being likely to enforce abstinence from meats, or to interfere with people for worshiping, and for either marrying or not marrying, according to their creed or inclination. The next example, however, shall be taken from an interference with liberty which we have by no means passed all danger of.

Wherever the Puritans have been sufficiently powerful, as in New England, and in Great Britain at the time of the Commonwealth, they have endeavored, with considerable success, to put down all public, and nearly all private amusements: especially music, dancing, public games, or other assemblages for purposes of diversion, and the theater. There are still in this country large bodies of persons by whose notions of morality and religion these recreations are condemned; and those persons belonging chiefly to the middle class, who are

the ascendant power in the present social and political condition of the kingdom, it is by no means impossible that persons of these sentiments may at some time or other command a majority in Parliament. How will the remaining portion of the community like to have the amusements that shall be permitted to them regulated by the religious and moral sentiments of the stricter Calvinists and Methodists? Would they not, with considerable peremptoriness, desire these intrusively pious members of society to mind their own business? This is precisely what should be said to every government and every public, who have the pretension that no person shall enjoy any pleasure which they think wrong. But if the principle of the pretension be admitted, no one can reasonably object to its being acted on in the sense of the majority, or other preponderating power in the country; and all persons must be ready to conform to the idea of a Christian commonwealth, as understood by the early settlers in New England, if a religious profession similar to theirs should ever succeed in regaining its lost ground, as religions supposed to be declining have so often been known to do.

To imagine another contingency, perhaps more likely to be realized than the one last mentioned. There is confessedly a strong tendency in the modern world towards a democratic constitution of society, accompanied or not by popular political institutions. It is affirmed that in the country where this tendency is most completely realized—where both society and the government are most democratic—the United States—the feeling of the majority, to whom any appearance of a more showy or costly style of living than they can hope to rival is disagreeable, operates as a tolerably effectual sumptuary law, and that in many parts of the Union it is really difficult for a person possessing a very large income to find any mode of spending it which will not incur popular disapprobation. Though such statements as these are doubtless much exaggerated as a representation of existing facts, the state of things they describe is not only a conceivable and possible, but a probable result of democratic feeling, combined with the notion that the public has a right to a veto on

the manner in which individuals shall spend their incomes. We have only further to suppose a considerable diffusion of Socialist opinions, and it may become infamous in the eyes of the majority to possess more property than some very small amount, or any income not earned by manual labor. Opinions similar in principle to these already prevail widely among the artisan class, and weigh oppressively on those who are amenable to the opinion chiefly of that class, namely, its own members. It is known that the bad workmen who form the majority of the operatives in many branches of industry, are decidedly of opinion that bad workmen ought to receive the same wages as good, and that no one ought to be allowed, through piecework or otherwise, to earn by superior skill or industry more than others can without it. And they employ a moral police, which occasionally becomes a physical one, to deter skillful workmen from receiving, and employers from giving, a larger remuneration for a more useful service. If the public have any jurisdiction over private concerns, I cannot see that these people are in fault, or that any individual's particular public can be blamed for asserting the same authority over his individual conduct which the general public asserts over people in general.

But, without dwelling upon suppositious cases, there are, in our own day, gross usurpations upon the liberty of private life actually practiced, and still greater ones threatened with some expectation of success, and opinions propounded which assert an unlimited right in the public not only to prohibit by law everything which it thinks wrong, but, in order to get at what it thinks wrong, to prohibit a number of things which it admits to be innocent.

Under the name of preventing intemperance, the people of one English colony, and of nearly half the United States, have been interdicted by law from making any use whatever of fermented drinks, except for medical purposes: for prohibition of their sale is in fact, as it is intended to be, prohibition of their use. And though the impracticability of executing the law has caused its repeal in several of the States which had adopted it, including the one from which it derives its

name, an attempt has notwithstanding been commenced, and is prosecuted with considerable zeal by many of the professed philanthropists, to agitate for a similar law in this country. The association, or "Alliance" as it terms itself, which has been formed for this purpose, has acquired some notoriety through the publicity given to a correspondence between its secretary and one of the very few English public men who hold that a politician's opinions ought to be founded on principles. Lord Stanley's share in this correspondence is calculated to strengthen the hopes already built on him, by those who know how rare such qualities as are manifested in some of his public appearances unhappily are among those who figure in political life. The organ of the Alliance, who would "deeply deplore the recognition of any principle which could be wrested to justify bigotry and prosecution," undertakes to point out the "broad and impassable barrier" which divides such principles from those of the association. "All matters relating to thought, opinion, conscience, appear to me," he says, "to be without the sphere of legislation; all pertaining to social act, habit, relation, subject only to a discretionary power vested in the State itself, and not in the individual, to be within it." No mention is made of a third class, different from either of these, viz., acts and habits which are not social, but individual; although it is to this class, surely, that the act of drinking fermented liquors belongs. Selling fermented liquors, however, is trading, and trading is a social act. But the infringement complained of is not on the liberty of the seller, but on that of the buyer and consumer; since the State might just as well forbid him to drink wine as purposely make it impossible for him to obtain it. The secretary, however, says, "I claim, as a citizen, a right to legislate whenever my social rights are invaded by the social act of another." And now for the definition of these "social rights." "If anything invades my social rights, certainly the traffic in strong drink does. It destroys my primary right of security, by constantly creating and stimulating social disorder. It invades my right of equality, by deriving a profit from the creation of a misery I am taxed to support.

It impedes my right to free moral and intellectual development, by surrounding my path with dangers, and by weakening and demoralizing society, from which I have a right to claim mutual aid and intercourse." A theory of "social rights" the like of which probably never before found its way into distinct language: being nothing short of this—that it is the absolute social right of every individual, that every other individual shall act in every respect exactly as he ought; that whosoever fails thereof in the smallest particular violates my social right, and entitles me to demand from the legislature the removal of the grievance. So monstrous a principle is far more dangerous than any single interference with liberty; there is no violation of liberty which it would not justify; it acknowledges no right to any freedom whatever, except perhaps to that of holding opinions in secret, without ever disclosing them: for, the moment an opinion which I consider noxious passes anyone's lips, it invades all the "social rights" attributed to me by the Alliance. The doctrine ascribes to all mankind a vested interest in each other's moral, intellectual, and even physical perfection, to be defined by each claimant according to his own standard.

Another important example of illegitimate interference with the rightful liberty of the individual, not simply threatened, but long since carried into triumphant effect, is Sabbatarian legislation. Without doubt, abstinence on one day in the week, so far as the exigencies of life permit, from the usual daily occupation, though in no respect religiously binding on any except Jews, is a highly beneficial custom. And inasmuch as this custom cannot be observed without a general consent to that effect among the industrious classes, therefore, in so far as some persons by working may impose the same necessity on others, it may be allowable and right that the law should guarantee to each the observance by others of the custom, by suspending the greater operations of industry on a particular day. But this justification, grounded on the direct interest which others have in each individual's observance of the practice, does not apply to the self-chosen occupations in which a person may think fit to employ his

leisure; nor does it hold good, in the smallest degree, for legal restrictions on amusements. It is true that the amusement of some is the day's work of others; but the pleasure, not to say the useful recreation, of many, is worth the labor of a few, provided the occupation is freely chosen, and can be freely resigned. The operatives are perfectly right in thinking that if all worked on Sunday, seven days' work would have to be given for six days' wages; but so long as the great mass of employments are suspended, the small number who for the enjoyment of others must still work, obtain a proportional increase of earnings; and they are not obliged to follow those occupations if they prefer leisure to emolument. If a further remedy is sought, it might be found in the establishment by custom of a holiday on some other day of the week for those particular classes of persons. The only ground, therefore, on which restrictions on Sunday amusements can be defended, must be that they are religiously wrong; a motive of legislation which can never be too earnestly protested against. "*Deorum injuriæ Diis curæ.*" It remains to be proved that society or any of its officers holds a commission from on high to avenge any supposed offense to Omnipotence, which is not also a wrong to our fellow-creatures. The notion that it is one man's duty that another should be religious, was the foundation of all the religious persecutions ever perpetrated, and, if admitted, would fully justify them. Though the feeling which breaks out in the repeated attempts to stop railways traveling on Sunday, in the resistance to the opening of museums, and the like, has not the cruelty of the old persecutors, the state of mind indicated by it is fundamentally the same. It is a determination not to tolerate others in doing what is permitted by their religion, because it is not permitted by the persecutor's religion. It is a belief that God not only abominates the act of the misbeliever, but will not hold us guiltless if we leave him unmolested.

I cannot refrain from adding to these examples of the little account commonly made of human liberty, the language of downright persecution which breaks out from the press of

this country whenever it feels called on to notice the remarkable phenomenon of Mormonism. Much might be said on the unexpected and instructive fact that an alleged new revelation, and a religion founded on it, the product of palpable imposture, not even supported by the *prestige* of extraordinary qualities in its founder, is believed by hundreds of thousands, and has been made the foundation of a society, in the age of newspapers, railways, and the electric telegraph. What here concerns us is, that this religion, like other and better religions, has its martyrs: that its prophet and founder was, for his teaching, put to death by a mob; that others of its adherents lost their lives by the same lawless violence; that they were forcibly expelled, in a body, from the country in which they first grew up; while, now that they have been chased into a solitary recess in the midst of a desert, many in this country openly declare that it would be right (only that it is not convenient) to send an expedition against them, and compel them by force to conform to the opinions of other people. The article of the Mormonite doctrine which is the chief provocative to the antipathy which thus breaks through the ordinary restraints of religious tolerance, is its sanction of polygamy; which, though permitted to Mohammedans, and Hindoos, and Chinese, seems to excite unquenchable animosity when practiced by persons who speak English and profess to be a kind of Christians. No one has a deeper disapprobation than I have of this Mormon institution; both for other reasons, and because, far from being in any way countenanced by the principle of liberty, it is a direct infraction of that principle, being a mere riveting of the chains of one half of the community, and an emancipation of the other from reciprocity of obligation towards them. Still, it must be remembered that this relation is as much voluntary on the part of the women concerned in it, and who may be deemed the sufferers by it, as is the case with any other form of the marriage institution; and however surprising this fact may appear, it has its explanation in the common ideas and customs of the world, which teaching women to think marriage the one thing needful, make it intelligible that many

a woman should prefer being one of several wives, to not being a wife at all. Other countries are not asked to recognize such unions, or release any portion of their inhabitants from their own laws on the score of Mormonite opinions. But when the dissentients have conceded to the hostile sentiments of others far more than could justly be demanded; when they have left the countries to which their doctrines were unacceptable, and established themselves in a remote corner of the earth, which they have been the first to render habitable to human beings; it is difficult to see on what principles but those of tyranny they can be prevented from living there under what laws they please, provided they commit no aggression on other nations, and allow perfect freedom of departure to those who are dissatisfied with their ways. A recent writer, in some respects of considerable merit, proposes (to use his own words) not a crusade, but a *civilisade*, against this polygamous community, to put an end to what seems to him a retrograde step in civilization. It also appears so to me, but I am not aware that any community has a right to force another to be civilized. So long as the sufferers by the bad law do not invoke assistance from other communities, I cannot admit that persons entirely unconnected with them ought to step in and require that a condition of things with which all who are directly interested appear to be satisfied, should be put an end to because it is a scandal to persons some thousands of miles distant, who have no part or concern in it. Let them send missionaries, if they please, to preach against it; and let them, by any fair means (of which silencing the teachers is not one), oppose the progress of similar doctrines among their own people. If civilization has got the better of barbarism when barbarism had the world to itself, it is too much to profess to be afraid lest barbarism, after having been fairly got under, should revive and conquer civilization. A civilization that can thus succumb to its vanquished enemy, must first have become so degenerate, that neither its appointed priests and teachers, nor anybody else, has the capacity, or will take the trouble, to stand up for it. If this be so, the sooner such a civilization receives notice to quit the

better. It can only go on from bad to worse, until destroyed and regenerated (like the Western Empire) by energetic barbarians.

CHAPTER V

Applications

The principles asserted in these pages must be more generally admitted as the basis for discussion of details, before a consistent application of them to all the various departments of government and morals can be attempted with any prospect of advantage. The few observations I propose to make on questions of detail are designed to illustrate the principles, rather than to follow them out to the consequences. I offer, not so much applications, as specimens of application; which may serve to bring into greater clearness the meaning and limits of the two maxims which together form the entire doctrine of this essay, and to assist the judgment in holding the balance between them, in the cases where it appears doubtful which of them is applicable to the case.

The maxims are, first, that the individual is not accountable to society for his actions, in so far as these concern the interests of no person but himself. Advice, instruction, persuasion, and avoidance by other people if thought necessary by them for their own good, are the only measures by which society can justifiably express its dislike or disapprobation of his conduct. Secondly, that for such actions as are prejudicial to the interests of others, the individual is accountable, and may be subjected either to social or to legal punishment, if society is of opinion that the one or the other is requisite for its protection.

In the first place, it must by no means be supposed, because damage, or probability of damage, to the interests of others, can alone justify the interference of society, that therefore it

always does justify such interference. In many cases, an individual, in pursuing a legitimate object, necessarily and therefore legitimately causes pain or loss to others, or intercepts a good which they have a reasonable hope of obtaining. Such oppositions of interest between individuals often arise from bad social institutions, but are unavoidable while those institutions last; and some would be unavoidable under any institutions. Whoever succeeds in an overcrowded profession, or in a competitive examination; whoever is preferred to another in any contest for an object which both desire, reaps benefit from the loss of others, from their wasted exertion and their disappointment. But it is, by common admission, better for the general interest of mankind, that persons should pursue their objects undeterred by this sort of consequences. In other words, society admits no right, either legal or moral, in the disappointed competitors to immunity from this kind of suffering; and feels called on to interfere, only when means of success have been employed which it is contrary to the general interest to permit—namely, fraud or treachery, and force.

Again, trade is a social act. Whoever undertakes to sell any description of goods to the public, does what affects the interest of other persons, and of society in general; and thus his conduct, in principle, comes within the jurisdiction of society: accordingly, it was once held to be the duty of governments, in all cases which were considered of importance, to fix prices, and regulate the processes of manufacture. But it is now recognized, though not till after a long struggle, that both the cheapness and the good quality of commodities are most effectually provided for by leaving the producers and sellers perfectly free, under the sole check of equal freedom to the buyers for supplying themselves elsewhere. This is the so-called doctrine of Free Trade, which rests on grounds different from, though equally solid with, the principle of individual liberty asserted in this essay. Restrictions on trade, or on production for purposes of trade, are indeed restraints; and all restraint, *qua* restraint, is an evil: but the restraints in question affect only that part of conduct which

society is competent to restrain, and are wrong solely because they do not really produce the results which it is desired to produce by them. As the principle of individual liberty is not involved in the doctrine of Free Trade, so neither is it in most of the questions which arise respecting the limits of that doctrine; as, for example, what amount of public control is admissible for the prevention of fraud by adulteration; how far sanitary precautions or arrangements to protect work people employed in dangerous occupations, should be enforced on employers. Such questions involve considerations of liberty only in so far as leaving people to themselves is always better, *ceteris paribus*, than controlling them; but that they may be legitimately controlled for these ends is in principle undeniable. On the other hand, there are questions relating to interference with trade which are essentially questions of liberty: such as the Maine Law, already touched upon; the prohibition of the importation of opium into China; the restriction of the sale of poisons; all cases, in short, where the object of the interference is to make it impossible or difficult to obtain a particular commodity. These interferences are objectionable, not as infringements on the liberty of the producer or seller, but on that of the buyer.

One of these examples, that of the sale of poisons, opens a new question; the proper limits of what may be called the functions of police; how far liberty may legitimately be invaded for the prevention of crime, or of accident. It is one of the undisputed functions of government to take precautions against crime before it has been committed, as well as to detect and punish it afterwards. The preventive function of government, however, is far more liable to be abused, to the prejudice of liberty, than the punitive function; for there is hardly any part of the legitimate freedom of action of a human being which would not admit of being represented, and fairly too, as increasing the facilities for some form or other of delinquency. Nevertheless, if a public authority, or even a private person, sees anyone evidently preparing to commit a crime, they are not bound to look on inactive until the crime is committed, but may interfere to

prevent it. If poisons were never bought or used for any purpose except the commission of murder it would be right to prohibit their manufacture and sale. They may, however, be wanted not only for innocent but for useful purposes, and restrictions cannot be imposed in the one case without operating in the other. Again, it is a proper office of public authority to guard against accidents. If either a public officer or anyone else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back, without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty), he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it. Similar considerations, applied to such a question as the sale of poisons, may enable us to decide which among the possible modes of regulation are or are not contrary to principle. Such a precaution, for example, as that of labeling the drug with some word expressive of its dangerous character, may be enforced without violation of liberty: the buyer cannot wish not to know that the thing he possesses has poisonous qualities. But to require in all cases the certificate of a medical practitioner would make it sometimes impossible, always expensive, to obtain the article for legitimate uses. The only mode apparent to me, in which difficulties may be thrown in the way of crime committed through this means, without any infringement worth taking into account upon the liberty of those who desire the poisonous substance for other purposes, consists in providing what, in the apt language of Bentham, is called "preappointed evidence." This provision is familiar to everyone in the case of contracts. It is usual and right that the law, when a contract

is entered into, should require as the condition of its enforcing performance, that certain formalities should be observed, such as signatures, attestation of witnesses, and the like, in order that in case of subsequent dispute there may be evidence to prove that the contract was really entered into, and that there was nothing in the circumstances to render it legally invalid: the effect being to throw great obstacles in the way of fictitious contracts, or contracts made in circumstances which, if known, would destroy their validity. Precautions of a similar nature might be enforced in the sale of articles adapted to be instruments of crime. The seller, for example, might be required to enter in a register the exact time of the transaction, the name and address of the buyer, the precise quality and quantity sold; to ask the purpose for which it was wanted, and record the answer he received. When there was no medical prescription, the presence of some third person might be required, to bring home the fact to the purchaser, in case there should afterwards be reason to believe that the article had been applied to criminal purposes. Such regulations would in general be no material impediment to obtaining the article, but a very considerable one to making an improper use of it without detection.

The right inherent in society to ward off crimes against itself by antecedent precautions, suggests the obvious limitations to the maxim, that purely self-regarding misconduct cannot properly be meddled with in the way of prevention or punishment. Drunkenness, for example, in ordinary cases, is not a fit subject for legislative interference; but I should deem it perfectly legitimate that a person who had once been convicted of any act of violence to others under the influence of drink, should be placed under a special legal restriction, personal to himself; that if he were afterwards found drunk, he should be liable to a penalty, and that if when in that state he committed another offense, the punishment to which he would be liable for that other offense should be increased in severity. The making himself drunk, in a person whom drunkenness excites to do harm to others, is a crime against others. So again, idleness, except in a person receiving

support from the public, or except when it constitutes a breach of contract, cannot without tyranny be made a subject of legal punishment; but if, either from idleness or from any other avoidable cause, a man fails to perform his legal duties to others, as for instance to support his children, it is no tyranny to force him to fulfill that obligation, by compulsory labor, if no other means are available.

Again, there are many acts which, being directly injurious only to the agents themselves, ought not to be legally interdicted, but which, if done publicly, are a violation of good manners, and coming thus within the category of offenses against others, may rightly be prohibited. Of this kind are offenses against decency; on which it is unnecessary to dwell, the rather as they are only connected indirectly with our subject, the objection to publicity being equally strong in the case of many actions not in themselves condemnable, nor supposed to be so.

There is another question to which an answer must be found, consistent with the principles which have been laid down. In cases of personal conduct supposed to be blamable, but which respect for liberty precludes society from preventing or punishing, because the evil directly resulting falls wholly on the agent; what the agent is free to do, ought other persons to be equally free to counsel or instigate? This question is not free from difficulty. The case of a person who solicits another to do an act is not strictly a case of self-regarding conduct. To give advice or offer inducements to anyone is a social act, and may, therefore, like actions in general which affect others, be supposed amenable to social control. But a little reflection corrects the first impression, by showing that if the case is not strictly within the definition of individual liberty, yet the reasons on which the principle of individual liberty is grounded are applicable to it. If people must be allowed, in whatever concerns only themselves, to act as seems best to themselves, at their own peril, they must equally be free to consult with one another about what is fit to be so done; to exchange opinions, and give and receive suggestions. Whatever it is permitted to do, it must

be permitted to advise to do. The question is doubtful only when the instigator derives a personal benefit from his advice; when he makes it his occupation, for subsistence or pecuniary gain, to promote what society and the State consider to be an evil. Then, indeed, a new element of complication is introduced; namely, the existence of classes of persons with an interest opposed to what is considered as the public weal, and whose mode of living is grounded on the counteraction of it. Ought this to be interfered with, or not? Fornication, for example, must be tolerated, and so must gambling; but should a person be free to be a pimp, or to keep a gambling-house? The case is one of those which lie on the exact boundary line between two principles, and it is not at once apparent to which of the two it properly belongs. There are arguments on both sides. On the side of toleration it may be said that the fact of following anything as an occupation, and living or profiting by the practice of it, cannot make that criminal which would otherwise be admissible; that the act should either be consistently permitted or consistently prohibited; that if the principles which we have hitherto defended are true, society has no business, *as* society, to decide anything to be wrong which concerns only the individual; that it cannot go beyond dissuasion, and that one person should be as free to persuade as another to dissuade. In opposition to this it may be contended, that although the public, or the State, are not warranted in authoritatively deciding, for purposes of repression or punishment, that such or such conduct affecting only the interests of the individual is good or bad, they are fully justified in assuming, if they regard it as bad, that its being so or not is at least a disputable question: that, this being supposed, they cannot be acting wrongly in endeavoring to exclude the influence of solicitations which are not disinterested, of instigators who cannot possibly be impartial—who have a direct personal interest on one side, and that side the one which the State believes to be wrong, and who confessedly promote it for personal objects only. There can surely, it may be urged, be nothing lost, no sacrifice of good, by so ordering matters that persons shall make

their election, either wisely or foolishly, on their own prompting, as free as possible from the arts of persons who stimulate their inclinations for interested purposes of their own. Thus (it may be said) though the statutes respecting unlawful games are utterly indefensible—though all persons should be free to gamble in their own or each other's houses, or in any place of meeting established by their own subscriptions, and open only to the members and their visitors—yet public gambling-houses should not be permitted. It is true that the prohibition is never effectual, and that, whatever amount of tyrannical power may be given to the police, gambling-houses can always be maintained under other pretenses; but they may be compelled to conduct their operations with a certain degree of secrecy and mystery, so that nobody knows anything about them but those who seek them; and more than this society ought not to aim at. There is considerable force in these arguments. I will not venture to decide whether they are sufficient to justify the moral anomaly of punishing the accessory, when the principal is (and must be) allowed to go free; of fining or imprisoning the procurer, but not the fornicator—the gambling-house keeper, but not the gambler. Still less ought the common operations of buying and selling to be interfered with on analogous grounds. Almost every article which is bought and sold may be used in excess, and the sellers have a pecuniary interest in encouraging that excess; but no argument can be founded on this, in favor, for instance, of the Maine Law; because the class of dealers in strong drinks, though interested in their abuse, are indispensably required for the sake of their legitimate use. The interest, however, of these dealers in promoting intemperance is a real evil, and justifies the State in imposing restrictions and requiring guarantees which, but for that justification, would be infringements of legitimate liberty.

A further question is, whether the State, while it permits, should nevertheless indirectly discourage conduct which it deems contrary to the best interests of the agent; whether, for example, it should take measures to render the means of drunkenness more costly, or add to the difficulty of procuring

them by limiting the number of the places of sale. On this as on most other practical questions, many distinctions require to be made. To tax stimulants for the sole purpose of making them more difficult to be obtained, is a measure differing only in degree from their entire prohibition; and would be justifiable only if that were justifiable. Every increase of cost is a prohibition, to those whose means do not come up to the augmented price; and to those who do, it is a penalty laid on them for gratifying a particular taste. Their choice of pleasures, and their mode of expending their income, after satisfying their legal and moral obligations to the State and to individuals, are their own concern, and must rest with their own judgment. These considerations may seem at first sight to condemn the selection of stimulants as special subjects of taxation for purposes of revenue. But it must be remembered that taxation for fiscal purposes is absolutely inevitable; that in most countries it is necessary that a considerable part of that taxation should be indirect; that the State, therefore, cannot help imposing penalties, which to some persons may be prohibitory, on the use of some articles of consumption. It is hence the duty of the State to consider, in the imposition of taxes, what commodities the consumers can best spare; and *a fortiori*, to select in preference those of which it deems the use, beyond a very moderate quantity, to be positively injurious. Taxation, therefore, of stimulants, up to the point which produces the largest amount of revenue (supposing that the State needs all the revenue which it yields) is not only admissible, but to be approved of.

The question of making the sale of these commodities a more or less exclusive privilege, must be answered differently, according to the purposes to which the restriction is intended to be subservient. All places of public resort require the restraint of a police, and places of this kind peculiarly, because offenses against society are especially apt to originate there. It is, therefore, fit to confine the power of selling these commodities (at least for consumption on the spot) to persons of known or vouched-for respectability of conduct; to make such regulations respecting hours of opening and clos-

ing as may be requisite for public surveillance, and to withdraw the license if breaches of the peace repeatedly take place through the connivance or incapacity of the keeper of the house, or if it becomes a rendezvous for concocting and preparing offenses against the law. Any further restriction I do not conceive to be, in principle, justifiable. The limitation in number, for instance, of beer and spirit houses, for the express purpose of rendering them more difficult of access, and diminishing the occasions of temptation, not only exposes all to an inconvenience because there are some by whom the facility would be abused, but is suited only to a state of society in which the laboring classes are avowedly treated as children or savages, and placed under an education of restraint, to fit them for future admission to the privileges of freedom. This is not the principle on which the laboring classes are professedly governed in any free country; and no person who sets due value on freedom will give his adhesion to their being so governed, unless after all efforts have been exhausted to educate them for freedom and govern them as freemen, and it has been definitively proved that they can only be governed as children. The bare statement of the alternative shows the absurdity of supposing that such efforts have been made in any case which needs be considered here. It is only because the institutions of this country are a mass of inconsistencies, that things find admittance into our practice which belong to the system of despotic, or what is called paternal, government, while the general freedom of our institutions precludes the exercise of the amount of control necessary to render the restraint of any real efficacy as a moral education.

It was pointed out in an early part of this essay, that the liberty of the individual, in things wherein the individual is alone concerned, implies a corresponding liberty in any number of individuals to regulate by mutual agreement such things as regard them jointly, and regard no persons but themselves. This question presents no difficulty, so long as the will of all the persons implicated remains unaltered; but since that will may change, it is often necessary, even in

things in which they alone are concerned, that they should enter into engagements with one another; and when they do, it is fit, as a general rule, that those engagements should be kept. Yet, in the laws, probably, of every country, this general rule has some exceptions. Not only persons are not held to engagements which violate the rights of third parties, but it is sometimes considered a sufficient reason for releasing them from an engagement, that it is injurious to themselves. In this and most other civilized countries, for example, an engagement by which a person should sell himself, or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling himself for a slave, he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favor, that would be afforded by his voluntarily remaining in it. The principle of freedom cannot require that he should be free not to be free. It is not freedom to be allowed to alienate his freedom. These reasons, the force of which is so conspicuous in this peculiar case, are evidently of far wider application; yet a limit is everywhere set to them by the necessities of life, which continually require, not indeed that we should resign our freedom, but that we should consent to this and the other limitation of it. The principle, however, which demands uncontrolled freedom of action in all that concerns only the agents themselves, requires that those who have become bound to one another, in things which concern no third party, should be able to release one another from the engage-

ment: and even without such voluntary release there are perhaps no contracts or engagements, except those that relate to money or money's worth, of which one can venture to say that there ought to be no liberty whatever of retraction. Baron Wilhelm von Humboldt, in the excellent essay from which I have already quoted, states it as his conviction, that engagements which involve personal relations or services should never be legally binding beyond a limited duration of time; and that the most important of these engagements, marriage, having the peculiarity that its objects are frustrated unless the feelings of both the parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it. This subject is too important, and too complicated, to be discussed in a parenthesis, and I touch on it only so far as is necessary for purposes of illustration. If the conciseness and generality of Baron Humboldt's dissertation had not obliged him in this instance to content himself with enunciating his conclusion without discussing the premises, he would doubtless have recognized that the question cannot be decided on grounds so simple as those to which he confines himself. When a person, either by express promise or by conduct, has encouraged another to rely upon his continuing to act in a certain way—to build expectations and calculations, and stake any part of his plan of life upon that supposition—a new series of moral obligations arises on his part towards that person, which may possibly be overruled, but cannot be ignored. And again, if the relation between two contracting parties has been followed by consequences to others; if it has placed third parties in any peculiar position, or, as in the case of marriage, has even called third parties into existence, obligations arise on the part of both the contracting parties towards those third persons, the fulfillment of which, or at all events the mode of fulfillment, must be greatly affected by the continuance or disruption of the relation between the original parties to the contract. It does not follow, nor can I admit, that these obligations extend to requiring the fulfillment of the contract at all costs to the happiness of the reluctant party; but they are a necessary ele-

ment in the question; and even if, as Von Humboldt maintains, they ought to make no difference in the *legal* freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make *much* difference), they necessarily make a great difference in the *moral* freedom. A person is bound to take all these circumstances into account before resolving on a step which may affect such important interests of others; and if he does not allow proper weight to those interests, he is morally responsible for the wrong. I have made these obvious remarks for the better illustration of the general principle of liberty, and not because they are at all needed on the particular question, which, on the contrary, is usually discussed as if the interest of children was everything, and that of grown persons nothing.

I have already observed that, owing to the absence of any recognized general principles, liberty is often granted where it should be withheld, as well as withheld where it should be granted; and one of the cases in which, in the modern European world, the sentiment of liberty is the strongest, is a case where, in my view, it is altogether misplaced. A person should be free to do as he likes in his own concerns; but he ought not to be free to do as he likes in acting for another, under the pretext that the affairs of the other are his own affairs. The State, while it respects the liberty of each in what specially regards himself, is bound to maintain a vigilant control over his exercise of any power which it allows him to possess over others. This obligation is almost entirely disregarded in the case of the family relations, a case, in its direct influence on human happiness, more important than all others taken together. The almost despotic power of husbands over wives need not be enlarged upon here, because nothing more is needed for the complete removal of the evil than that wives should have the same rights, and should receive the protection of law in the same manner, as all other persons; and because, on this subject, the defenders of established injustice do not avail themselves of the plea of liberty, but stand forth openly as the champions of power. It is in the case of children that misapplied notions of liberty are a

real obstacle to the fulfillment by the State of its duties. One would almost think that a man's children were supposed to be literally, and not metaphorically, a part of himself, so jealous is opinion of the smallest interference of law with his absolute and exclusive control over them; more jealous than of almost any interference with his own freedom of action: so much less do the generality of mankind value liberty than power. Consider, for example, the case of education. Is it not almost a self-evident axiom, that the State should require and compel the education, up to a certain standard, of every human being who is born its citizen? Yet who is there that is not afraid to recognize and assert this truth? Hardly anyone indeed will deny that it is one of the most sacred duties of the parents (or, as law and usage now stand, the father), after summoning a human being into the world, to give to that being an education fitting him to perform his part well in life towards others and towards himself. But while this is unanimously declared to be the father's duty, scarcely anybody, in this country, will bear to hear of obliging him to perform it. Instead of his being required to make any exertion or sacrifice for securing education to his child, it is left to his choice to accept it or not when it is provided gratis! It still remains unrecognized, that to bring a child into existence without a fair prospect of being able, not only to provide food for its body, but instruction and training for its mind, is a moral crime, both against the unfortunate offspring and against society; and that if the parent does not fulfill this obligation, the State ought to see it fulfilled, at the charge, as far as possible, of the parent.

Were the duty of enforcing universal education once admitted there would be an end to the difficulties about what the State should teach, and how it should teach, which now convert the subject into a mere battlefield for sects and parties, causing the time and labor which should have been spent in educating to be wasted in quarreling about education. If the government would make up its mind to require for every child a good education, it might save itself the trouble of providing one. It might leave to parents to obtain

the education where and how they pleased, and content itself with helping to pay the school fees of the poorer classes of children, and defraying the entire school expenses of those who have no one else to pay for them. The objections which are urged with reason against State education do not apply to the enforcement of education by the State, but to the State's taking upon itself to direct that education; which is a totally different thing. That the whole or any large part of the education of the people should be in State hands, I go as far as anyone in deprecating. All that has been said of the importance of individuality of character, and diversity in opinions and modes of conduct, involves, as of the same unspeakable importance, diversity of education. A general State education is a mere contrivance for molding people to be exactly like one another: and as the mold in which it casts them is that which pleases the predominant power in the government, whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation; in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body. An education established and controlled by the State should only exist, if it exist at all, as one among many competing experiments, carried on for the purpose of example and stimulus, to keep the others up to a certain standard of excellence. Unless, indeed, when society in general is in so backward a state that it could not or would not provide for itself any proper institutions of education unless the government undertook the task: then, indeed, the government may, as the less of two great evils, take upon itself the business of schools and universities, as it may that of joint stock companies, when private enterprise, in a shape fitted for undertaking great works of industry, does not exist in the country. But in general, if the country contains a sufficient number of persons qualified to provide education under government auspices, the same persons would be able and willing to give an equally good education on the voluntary principle, under the assurance of remuneration afforded by a law rendering

education compulsory, combined with State aid to those unable to defray the expense.

The instrument for enforcing the law could be no other than public examinations, extending to all children, and beginning at an early age. An age might be fixed at which every child must be examined, to ascertain if he (or she) is able to read. If a child proves unable, the father, unless he has some sufficient ground of excuse, might be subjected to a moderate fine, to be worked out, if necessary, by his labor, and the child might be put to school at his expense. Once in every year the examination should be renewed, with a gradually extending range of subjects, so as to make the universal acquisition, and what is more, retention, of a certain minimum of general knowledge virtually compulsory. Beyond that minimum there should be voluntary examinations on all subjects, at which all who come up to a certain standard of proficiency might claim a certificate. To prevent the State from exercising, through these arrangements, an improper influence over opinion, the knowledge required for passing an examination (beyond the merely instrumental parts of knowledge, such as languages and their use) should, even in the higher classes of examinations, be confined to facts and positive science exclusively. The examinations on religion, politics, or other disputed topics, should not turn on the truth or falsehood of opinions, but on the matter of fact that such and such an opinion is held, on such grounds, by such authors, or schools, or churches. Under this system, the rising generation would be no worse off in regard to all disputed truths than they are at present; they would be brought up either churchmen or dissenters as they now are, the State merely taking care that they should be instructed churchmen, or instructed dissenters. There would be nothing to hinder them from being taught religion, if their parents chose, at the same schools where they were taught other things. All attempts by the State to bias the conclusions of its citizens on disputed subjects are evil; but it may very properly offer to ascertain and certify that a person possesses

the knowledge requisite to make his conclusions, on any given subject, worth attending to. A student of philosophy would be the better for being able to stand an examination both in Locke and in Kant, whichever of the two he takes up with, or even if with neither: and there is no reasonable objection to examining an atheist in the evidences of Christianity, provided he is not required to profess a belief in them. The examinations, however, in the higher branches of knowledge should, I conceive, be entirely voluntary. It would be giving too dangerous a power to governments were they allowed to exclude anyone from professions, even from the profession of teacher, for alleged deficiency of qualifications: and I think, with Wilhelm von Humboldt, that degrees, or other public certificates of scientific or professional acquirements, should be given to all who present themselves for examination, and stand the test; but that such certificates should confer no advantage over competitors other than the weight which may be attached to their testimony by public opinion.

It is not in the matter of education only that misplaced notions of liberty prevent moral obligations on the part of parents from being recognized, and legal obligations from being imposed, where there are the strongest grounds for the former always, and in many cases for the latter also. The fact itself, of causing the existence of a human being, is one of the most responsible actions in the range of human life. To undertake this responsibility—to bestow a life which may be either a curse or a blessing—unless the being on whom it is to be bestowed will have at least the ordinary chances of a desirable existence, is a crime against that being. And in a country either over-peopled, or threatened with being so, to produce children, beyond a very small number, with the effect of reducing the reward of labor by their competition, is a serious offense against all who live by the remuneration of their labor. The laws which, in many countries on the Continent, forbid marriage unless the parties can show that they have the means of supporting a family, do not exceed the legitimate powers of the State: and whether such laws be expedient or not (a question mainly dependent on local

circumstances and feelings), they are not objectionable as violations of liberty. Such laws are interferences of the State to prohibit a mischievous act—an act injurious to others, which ought to be a subject of reprobation, and social stigma, even when it is not deemed expedient to superadd legal punishment. Yet the current ideas of liberty, which bend so easily to real infringements of the freedom of the individual in things which concern only himself, would repel the attempt to put any restraint upon his inclinations when the consequence of their indulgence is a life or lives of wretchedness and depravity to the offspring, with manifold evils to those sufficiently within reach to be in any way affected by their actions. When we compare the strange respect of mankind for liberty, with their strange want of respect for it, we might imagine that a man had an indispensable right to do harm to others, and no right at all to please himself without giving pain to anyone.

I have reserved for the last place a large class of questions respecting the limits of government interference, which, though closely connected with the subject of this essay, do not, in strictness, belong to it. These are cases in which the reasons against interference do not turn upon the principle of liberty: the question is not about restraining the actions of individuals, but about helping them; it is asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually or in voluntary combination.

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently en-

larged upon by political economists, and is not particularly related to the principles of this essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them rather than by the government, as a means to their own mental education—a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns—habituating them to act from public or semi-public motives, and guide their conduct by aims which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved; as is exemplified by the too often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the localities, and of the great enterprises of industry by the union of those who voluntarily supply the pecuniary means, is further recommended by all the advantages which have been set forth in this essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What

the State can usefully do is to make itself a central depository, and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others, instead of tolerating no experiments but its own.

The third and most cogent reason for restricting the interference of government is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employees of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skillful the arrangements for obtaining the best qualified hands and heads with which to work it. In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for these employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents is that the occupation of a permanent official servant of the State does not hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career in the professions, or in the service of companies and other public bodies. One would not have been

surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety-valve of the proposed system. If indeed all the high talent of the country *could* be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practiced intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: the multitude for direction and dictation in all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this *regime*, not only is the outside public ill-qualified, for want of practical experience, to criticize or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no reform can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian empire, as shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit, the public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only leave to do it, but even how it is to be done, naturally hold the State responsible for all evil

which befalls them, and when the evil exceeds their amount of patience, they rise against the government, and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place.

A very different spectacle is exhibited among a people accustomed to transact their own business. In France, a large part of the people, having been engaged in military service, many of whom have held at least the rank of non-commissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action. What the French are in military affairs, the Americans are in every kind of civil business; let them be left without a government, every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men because these are able to seize and pull the reins of the central administration. No bureaucracy can hope to make such a people as this do or undergo anything that they do not like. But where everything is done through the bureaucracy, nothing to which the bureaucracy is really adverse can be done at all. The constitution of such countries is an organization of the experience and practical ability of the nation into a disciplined body for the purpose of governing the rest; and the more perfect that organization is in itself, the more successful in drawing to itself and educating for itself the persons of greatest capacity from all ranks of the community, the more complete is the bondage of all, the members of the bureaucracy included. For the governors are as much the slaves of their organization and discipline as the governed are of the governors. A Chinese mandarin is as much the tool and creature of a despotism as the humblest cultivator. An individual

Jesuit is to the utmost degree of abasement the slave of his order, though the order itself exists for the collective power and importance of its members.

It is not, also, to be forgotten, that the absorption of all the principal ability of the country into the governing body is fatal, sooner or later, to the mental activity and progressiveness of the body itself. Banded together as they are—working a system which, like all systems, necessarily proceeds in a great measure by fixed rules—the official body are under the constant temptation of sinking into indolent routine, or, if they now and then desert that mill-horse round, of rushing into some half-examined crudity which has struck the fancy of some leading member of the corps; and the sole check to these closely allied, though seemingly opposite, tendencies, the only stimulus which can keep the ability of the body itself up to a high standard, is liability to the watchful criticism of equal ability outside the body. It is indispensable, therefore, that the means should exist, independently of the government, of forming such ability, and furnishing it with the opportunities and experience necessary for a correct judgment of great practical affairs. If we would possess permanently a skillful and efficient body of functionaries—above all, a body able to originate and willing to adopt improvements; if we would not have our bureaucracy degenerate into a pedantocracy, this body must not engross all the occupations which form and cultivate the faculties required for the government of mankind.

To determine the point at which evils, so formidable to human freedom and advancement, begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognized chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralized power and intelligence as can be had without turning into governmental channels too great a proportion of the general activity—is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and

various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest possible centralization of information, and diffusion of it from the center. Thus, in municipal administration there would be, as in the New England States, a very minute division among separate officers, chosen by the localities, of all business which is not better left to the persons directly interested; but besides this, there would be, in each department of local affairs, a central superintendence, forming a branch of the general government. The organ of this superintendence would concentrate, as in a focus, the variety of information and experience derived from the conduct of that branch of public business in all the localities, from everything analogous which is done in foreign countries, and from the general principles of political science. This central organ should have a right to know all that is done, and its special duty should be that of making the knowledge acquired in one place available for others. Emancipated from the petty prejudices and narrow views of a locality by its elevated position and comprehensive sphere of observation, its advice would naturally carry much authority; but its actual power, as a permanent institution, should, I conceive, be limited to compelling the local officers to obey the laws laid down for their guidance. In all things not provided for by general rules, those officers should be left to their own judgment, under responsibility to their constituents. For the violation of rules, they should be responsible to law, and the rules themselves should be laid down by the legislature; the central administrative authority only watching over their execution, and if they were not properly carried into effect, appealing, according to the nature of the case, to the tribunals to enforce the law, or to the constituencies to dismiss the functionaries who had not executed it according to its spirit. Such, in its general conception, is the central superintendence which the Poor

Law Board is intended to exercise over the administrators of the Poor Rate throughout the country. Whatever powers the Board exercises beyond this limit were right and necessary in that peculiar case, for the cure of rooted habits of maladministration in matters deeply affecting not the localities merely, but the whole community; since no locality has a moral right to make itself by mismanagement a nest of pauperism, necessarily overflowing into other localities, and impairing the moral and physical condition of the whole laboring community. The powers of administrative coercion and subordinate legislation possessed by the Poor Law Board (but which, owing to the state of opinion on the subject, are very scantily exercised by them), though perfectly justifiable in a case of first-rate national interest, would be wholly out of place in the superintendence of interests purely local. But a central organ of information and instruction for all the localities would be equally valuable in all departments of administration. A government cannot have too much of the kind of activity which does not impede, but aids and stimulates, individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion, denouncing, it makes them work in fetters, or bids them stand aside and does their work instead of them. The worth of a State, in the long run, is the worth of the individuals composing it: and a State which postpones the interests of *their* mental expansion and elevation to a little more of administrative skill, or of that semblance of it which practice gives, in the details of business; a State which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

Jean Jacques Rousseau

FROM THE
SOCIAL CONTRACT

Jean Jacques Rousseau

[1712-1778]

Quarrelsome, sentimental, impulsive and always unorthodox, Jean Jacques Rousseau rushed in where other Frenchmen of his time walked reluctantly. With little knowledge of music, he undertook to revolutionize musical notation. With tireless energy he wrote operas, plays, novels, essays, political tracts, autobiography and social discourses, enough to fill forty-seven volumes. Nearly everything that came from his pen was controversial and combative enough to make for him many distinguished enemies. Several years of his life were spent in exile, and it was in England that a major portion of his famous *Confessions* was written. His novels, *La Nouvelle Héloïse* and *Emile*, created a furore, in spite of what seems today their excessive sentimentality. Rousseau's belief in the "natural man," unspoiled by civilization, made him an idol of the Revolution which was to follow ten years after his death. Its declaration of the rights of man was based upon Rousseau's *The Social Contract*, which maintains with passion that all government must rest upon the consent of the governed. *The Social Contract* was not only an influence on Rousseau's time and his country, but also on the revolutionary founders of democracy in America.

FROM THE SOCIAL CONTRACT

JEAN JACQUES ROUSSEAU

The first man who, having enclosed a piece of ground, be-thought himself of saying *This is mine*, and found people simple enough to believe him, was the real founder of civil society. From how many crimes, wars and murders, from how many horrors and misfortunes might not any one have saved mankind, by pulling up the stakes, or filling up the ditch, and crying to his fellows, "Beware of listening to this impostor; you are undone if you once forget that the fruits of the earth belong to us all, and the earth itself to nobody." But there is great probability that things had then already come to such a pitch, that they could no longer continue as they were; for the idea of property depends on many prior ideas, which could only be acquired successively, and cannot have been formed all at once in the human mind. Mankind must have made very considerable progress, and acquired considerable knowledge and industry which they must also have transmitted and increased from age to age, before they arrived at this last point of the state of nature. Let us then go farther back, and endeavour to unify under a single point of view that slow succession of events and discoveries in the most natural order.

Man's first feeling was that of his own existence, and his first care that of self-preservation. The produce of the earth furnished him with all he needed, and instinct told him how to use it. Hunger and other appetites made him at various

times experience various modes of existence; and among these was one which urged him to propagate his species—a blind propensity that, having nothing to do with the heart, produced a merely animal act. The want once gratified, the two sexes knew each other no more; and even the offspring was nothing to its mother, as soon as it could do without her.

Such was the condition of infant man; the life of an animal limited at first to mere sensations, and hardly profiting by the gifts nature bestowed on him, much less capable of entertaining a thought of forcing anything from her. But difficulties soon presented themselves, and it became necessary to learn how to surmount them: the height of the trees, which prevented him from gathering their fruits, the competition of other animals desirous of the same fruits, and the ferocity of those who needed them for their own preservation, all obliged him to apply himself to bodily exercises. He had to be active, swift of foot, and vigorous in fight. Natural weapons, stones and sticks, were easily found: he learnt to surmount the obstacles of nature, to contend in case of necessity with other animals, and to dispute for the means of subsistence even with other men, or to indemnify himself for what he was forced to give up to a stronger.

In proportion as the human race grew more numerous, men's cares increased. The difference of soils, climates and seasons, must have introduced some differences into their manner of living. Barren years, long and sharp winters, scorching summers which parched the fruits of the earth, must have demanded a new industry. On the seashore and the banks of rivers, they invented the hook and line, and became fishermen and eaters of fish. In the forests they made bows and arrows, and became huntsmen and warriors. In cold countries they clothed themselves with the skins of the beasts they had slain. The lightning, a volcano, or some lucky chance acquainted them with fire, a new resource against the rigours of winter: they next learned how to preserve this element, then how to reproduce it, and finally how to prepare with it the flesh of animals which before they had eaten raw.

This repeated relevance of various beings to himself, and one to another, would naturally give rise in the human mind to the perceptions of certain relations between them. Thus the relations which we denote by the terms, great, small, strong, weak, swift, slow, fearful, bold, and the like, almost insensibly compared at need, must have at length produced in him a kind of reflection, or rather a mechanical prudence, which would indicate to him the precautions most necessary to his security.

The new intelligence which resulted from this development increased his superiority over other animals, by making him sensible of it. He would now endeavour, therefore, to ensnare them, would play them a thousand tricks, and though many of them might surpass him in swiftness or in strength, would in time become the master of some and the scourge of others. Thus, the first time he looked into himself, he felt the first emotion of pride; and, at a time when he scarce knew how to distinguish the different orders of beings, by looking upon his species as of the highest order, he prepared the way for assuming pre-eminence as an individual.

Other men, it is true, were not then to him what they now are to us, and he had no greater intercourse with them than with other animals; yet they were not neglected in his observations. The conformities, which he would in time discover between them, and between himself and his female, led him to judge of others which were not then perceptible; and finding that they all behaved as he himself would have done in like circumstances, he naturally inferred that their manner of thinking and acting was altogether in conformity with his own. This important truth, once deeply impressed on his mind, must have induced him, from an intuitive feeling more certain and much more rapid than any kind of reasoning, to pursue the rules of conduct, which he had best observe towards them, for his own security and advantage.

Taught by experience that the love of well-being is the sole motive of human actions, he found himself in a position to distinguish the few cases, in which mutual interest might justify him in relying upon the assistance of his fellows; and

also the still fewer cases in which a conflict of interests might give cause to suspect them. In the former case, he joined in the same herd with them, or at most in some kind of loose association, that laid no restraint on its members, and lasted no longer than the transitory occasion that formed it. In the latter case, every one sought his own private advantage, either by open force, if he thought himself strong enough, or by address and cunning, if he felt himself the weaker.

In this manner, men may have insensibly acquired some gross ideas of mutual undertakings, and of the advantages of fulfilling them: that is, just so far as their present and apparent interest was concerned: for they were perfect strangers to foresight, and were so far from troubling themselves about the distant future, that they hardly thought of the morrow. If a deer was to be taken, every one saw that, in order to succeed, he must abide faithfully by his post: but if a hare happened to come within the reach of any one of them, it is not to be doubted that he pursued it without scruple, and, having seized his prey, cared very little, if by so doing he caused his companions to miss theirs.

It is easy to understand that such intercourse would not require a language much more refined than that of rooks or monkeys, who associate together for much the same purpose. Inarticulate cries, plenty of gestures and some imitative sounds, must have been for a long time the universal language; and by the addition, in every country, of some conventional articulate sounds (of which, as I have already intimated, the first institution is not too easy to explain) particular languages were produced; but these were rude and imperfect, and nearly such as are now to be found among some savage nations.

Hurried on by the rapidity of time, by the abundance of things I have to say, and by the almost insensible progress of things in their beginnings, I pass over in an instant a multitude of ages; for the slower the events were in their succession, the more rapidly may they be described.

These first advances enabled men to make others with

greater rapidity. In proportion as they grew enlightened, they grew industrious. They ceased to fall asleep under the first tree, or in the first cave that afforded them shelter; they invented several kinds of implements of hard and sharp stones, which they used to dig up the earth, and to cut wood; they then made huts out of branches, and afterwards learnt to plaster them over with mud and clay. This was the epoch of a first revolution, which established and distinguished families, and introduced a kind of property, in itself the source of a thousand quarrels and conflicts. As, however, the strongest were probably the first to build themselves huts which they felt themselves able to defend, it may be concluded that the weak found it much easier and safer to imitate, than to attempt to dislodge them: and of those who were once provided with huts, none could have any inducement to appropriate that of his neighbour; not indeed so much because it did not belong to him, as because it could be of no use, and he could not make himself master of it without exposing himself to a desperate battle with the family which occupied it.

The first expansions of the human heart were the effects of a novel situation, which united husbands and wives, fathers and children, under one roof. The habit of living together soon gave rise to the finest feelings known to humanity, conjugal love and paternal affection. Every family became a little society, the more united because liberty and reciprocal attachment were the only bonds of its union. The sexes, whose manner of life had been hitherto the same, began now to adopt different ways of living. The women became more sedentary, and accustomed themselves to mind the hut and their children, while the men went abroad in search of their common subsistence. From living a softer life, both sexes also began to lose something of their strength and ferocity: but, if individuals became to some extent less able to encounter wild beasts separately, they found it, on the other hand, easier to assemble and resist in common.

The simplicity and solitude of man's life in this new condition, the paucity of his wants, and the implements he had invented to satisfy them, left him a great deal of leisure, which

he employed to furnish himself with many conveniences unknown to his fathers: and this was the first yoke he inadvertently imposed on himself, and the first source of the evils he prepared for his descendants. For, besides continuing thus to enervate both body and mind, these conveniences lost with use almost all their power to please, and even degenerated into real needs, till the want of them became far more disagreeable than the possession of them had been pleasant. Men would have been unhappy at the loss of them, though the possession did not make them happy.

We can here see a little better how the use of speech became established, and insensibly improved in each family, and we may form a conjecture also concerning the manner in which various causes may have extended and accelerated the progress of language, by making it more and more necessary. Floods or earthquakes surrounded inhabited districts with precipices or waters: revolutions of the globe tore off portions from the continent, and made them islands. It is readily seen that among men thus collected and compelled to live together, a common idiom must have arisen much more easily than among those who still wandered through the forests of the continent. Thus it is very possible that after their first essays in navigation the islanders brought over the use of speech to the continent: and it is at least very probable that communities and languages were first established in islands, and even came to perfection there before they were known on the mainland.

Everything now begins to change its aspect. Men, who have up to now been roving in the woods, by taking to a more settled manner of life, come gradually together, form separate bodies, and at length in every country arises a distinct nation, united in character and manners, not by regulations or laws, but by uniformity of life and food, and the common influence of climate. Permanent neighbourhood could not fail to produce, in time, some connection between different families. Among young people of opposite sexes, living in neighbouring huts, the transient commerce required by nature soon led, through mutual intercourse, to another kind

not less agreeable, and more permanent. Men began now to take the difference between objects into account, and to make comparisons; they acquired imperceptibly the ideas of beauty and merit, which soon gave rise to feelings of preference. In consequence of seeing each other often, they could not do without seeing each other constantly. A tender and pleasant feeling insinuated itself into their souls, and the least opposition turned it into an impetuous fury: with love arose jealousy; discord triumphed, and human blood was sacrificed to the gentlest of all passions.

As ideas and feelings succeeded one another, and heart and head were brought into play, men continued to lay aside their original wildness; their private connections became every day more intimate as their limits extended. They accustomed themselves to assemble before their huts round a large tree; singing and dancing, the true offspring of love and leisure, became the amusement, or rather the occupation, of men and women thus assembled together with nothing else to do. Each one began to consider the rest, and to wish to be considered in turn; and thus a value came to be attached to public esteem. Whoever sang or danced best, whoever was the handsomest, the strongest, the most dexterous, or the most eloquent, came to be of most consideration; and this was the first step towards inequality, and at the same time towards vice. From these first distinctions arose on the one side vanity and contempt and on the other shame and envy: and the fermentation caused by these new leavens ended by producing combinations fatal to innocence and happiness.

As soon as men began to value one another, and the idea of consideration had got a footing in the mind, every one put in his claim to it, and it became impossible to refuse it to any with impunity. Hence arose the first obligations of civility even among savages; and every intended injury became an affront; because, besides the hurt which might result from it, the party injured was certain to find in it a contempt for his person, which was often more insupportable than the hurt itself.

Thus, as every man punished the contempt shown him by

others, in proportion to his opinion of himself, revenge became terrible, and men bloody and cruel. This is precisely the state reached by most of the savage nations known to us: and it is for want of having made a proper distinction in our ideas, and seen how very far they already are from the state of nature, that so many writers have hastily concluded that man is naturally cruel, and requires civil institutions to make him more mild; whereas nothing is more gentle than man in his primitive state, as he is placed by nature at an equal distance from the stupidity of brutes, and the fatal ingenuity of civilised man. Equally confined by instinct and reason to the sole care of guarding himself against the mischiefs which threaten him, he is restrained by natural compassion from doing any injury to others, and is not led to do such a thing even in return for injuries received. For, according to the axiom of the wise Locke, *There can be no injury, where there is no property.*

But it must be remarked that the society thus formed, and the relations thus established among men, required of them qualities different from those which they possessed from their primitive constitution. Morality began to appear in human actions, and every one, before the institution of law, was the only judge and avenger of the injuries done him, so that the goodness which was suitable in the pure state of nature was no longer proper in the new-born state of society. Punishments had to be made more severe, as opportunities of offending became more frequent, and the dread of vengeance had to take the place of the rigour of the law. Thus, though men had become less patient, and their natural compassion had already suffered some diminution, this period of expansion of the human faculties, keeping a just mean between the indolence of the primitive state and the petulant activity of our egoism, must have been the happiest and most stable of epochs. The more we reflect on it, the more we shall find that this state was the least subject to revolutions, and altogether the very best man could experience; so that he can have departed from it only through some fatal accident, which, for the public good, should never have happened. The example

of savages, most of whom have been found in this state, seems to prove that men were meant to remain in it, that it is the real youth of the world, and that all subsequent advances have been apparently so many steps towards the perfection of the individual, but in reality towards the decrepitude of the species.

So long as men remained content with their rustic huts, so long as they were satisfied with clothes made of the skins of animals and sewn together with thorns and fishbones, adorned themselves only with feathers and shells, and continued to paint their bodies different colours, to improve and beautify their bows and arrows and to make with sharp-edged stones fishing boats or clumsy musical instruments; in a word, so long as they undertook only what a single person could accomplish, and confined themselves to such arts as did not require the joint labour of several hands, they lived free, healthy, honest and happy lives, so long as their nature allowed, and as they continued to enjoy the pleasures of mutual and independent intercourse. But from the moment one man began to stand in need of the help of another; from the moment it appeared advantageous to any one man to have enough provisions for two, equality disappeared, property was introduced, work became indispensable, and vast forests became smiling fields, which man had to water with the sweat of his brow, and where slavery and misery were soon seen to germinate and grow up with the crops.

Metallurgy and agriculture were the two arts which produced this great revolution. The poets tell us it was gold and silver, but, for the philosophers, it was iron and corn, which first civilised men, and ruined humanity. Thus both were unknown to the savages of America, who for that reason are still savage: the other nations also seem to have continued in a state of barbarism while they practised only one of these arts. One of the best reasons, perhaps, why Europe has been, if not longer, at least more constantly and highly civilised than the rest of the world, is that it is at once the most abundant in iron and the most fertile in corn.

It is difficult to conjecture how men first came to know and

use iron; for it is impossible to suppose they would of themselves think of digging the ore out of the mine, and preparing it for smelting, before they knew what would be the result. On the other hand, we have the less reason to suppose this discovery the effect of any accidental fire, as mines are only formed in barren places, bare of trees and plants; so that it looks as if nature had taken pains to keep the fatal secret from us. There remains, therefore, only the extraordinary accident of some volcano which, by ejecting metallic substances already in fusion, suggested to the spectators the idea of imitating the natural operation. And we must further conceive them as possessed of uncommon courage and foresight, to undertake so laborious a work, with so distant a prospect of drawing advantage from it; yet these qualities are united only in minds more advanced than we can suppose those of these first discoverers to have been.

With regard to agriculture, the principles of it were known long before they were put in practice; and it is indeed hardly possible that men, constantly employed in drawing their subsistence from plants and trees, should not readily acquire a knowledge of the means made use of by nature for the propagation of vegetables. It was in all probability very long, however, before their industry took that turn, either because trees, which together with hunting and fishing afforded them food, did not require their attention; or because they were ignorant of the use of corn, or without instruments to cultivate it; or because they lacked foresight to future needs; or lastly, because they were without means of preventing others from robbing them of the fruit of their labour.

When they grew more industrious, it is natural to believe that they began, with the help of sharp stones and pointed sticks, to cultivate a few vegetables or roots around their huts; though it was long before they knew how to prepare corn, or were provided with the implements necessary for raising it in any large quantity; not to mention how essential it is, for husbandry, to consent to immediate loss, in order to reap a future gain—a precaution very foreign to the turn of a savage's mind; for, as I have said, he hardly foresees in the morning what he will need at night.

The invention of the other arts must therefore have been necessary to compel mankind to apply themselves to agriculture. No sooner were artificers wanted to smelt and forge iron, than others were required to maintain them; the more hands that were employed in manufactures, the fewer were left to provide for the common subsistence, though the number of mouths to be furnished with food remained the same: and as some required commodities in exchange for their iron, the rest at length discovered the method of making iron serve for the multiplication of commodities. By this means the arts of husbandry and agriculture were established on the one hand, and the art of working metals and multiplying their uses on the other.

The cultivation of the earth necessarily brought about its distribution; and property, once recognised, gave rise to the first rules of justice; for, to secure each man his own, it had to be possible for each to have something. Besides, as men began to look forward to the future, and all had something to lose, every one had reason to apprehend that reprisals would follow any injury he might do to another. This origin is so much the more natural, as it is impossible to conceive how property can come from anything but manual labour: for what else can a man add to things which he does not originally create, so as to make them his own property? It is the husbandman's labour alone that, giving him a title to the produce of the ground he has tilled, gives him a claim also to the land itself, at least till harvest; and so, from year to year, a constant possession which is easily transformed into property. When the ancients, says Grotius, gave to Ceres the title of *Legislatrix*, and to a festival celebrated in her honour the name of *Thesmophoria*, they meant by that that the distribution of lands had produced a new kind of right: that is to say, the right of property, which is different from the right deducible from the law of nature.

In this state of affairs, equality might have been sustained, had the talents of individuals been equal, and had, for example, the use of iron and the consumption of commodities always exactly balanced each other; but, as there was nothing to preserve this balance, it was soon disturbed; the strongest

did most work; the most skilful turned his labour to best account; the most ingenious devised methods of diminishing his labour: the husbandman wanted more iron, or the smith more corn, and, while both laboured equally, the one gained a great deal by his work, while the other could hardly support himself. Thus natural inequality unfolds itself insensibly with that of combination, and the difference between men, developed by their different circumstances, becomes more sensible and permanent in its effects, and begins to have an influence, in the same proportion, over the lot of individuals.

Matters once at this pitch, it is easy to imagine the rest. I shall not detain the reader with a description of the successive invention of other arts, the development of language, the trial and utilisation of talents, the inequality of fortunes, the use and abuse of riches, and all the details connected with them which the reader can easily supply for himself. I shall confine myself to a glance at mankind in this new situation.

Behold then all human faculties developed, memory and imagination in full play, egoism interested, reason active, and the mind almost at the highest point of its perfection. Behold all the natural qualities in action, the rank and condition of every man assigned him; not merely his share of property and his power to serve or injure others, but also his wit, beauty, strength or skill, merit or talents: and these being the only qualities capable of commanding respect, it soon became necessary to possess or to affect them.

It now became the interest of men to appear what they really were not. To be and to seem became two totally different things; and from this distinction sprang insolent pomp and cheating trickery, with all the numerous vices that go in their train. On the other hand, free and independent as men were before, they were now, in consequence of a multiplicity of new wants, brought into subjection, as it were, to all nature, and particularly to one another; and each became in some degree a slave even in becoming the master of other men: if rich, they stood in need of the services of others; if poor, of their assistance; and even a middle condition did not enable them to do without one another. Man must now,

therefore, have been perpetually employed in getting others to interest themselves in his lot, and in making them, apparently at least, if not really, find their advantage in promoting his own. Thus he must have been sly and artful in his behaviour to some, and imperious and cruel to others; being under a kind of necessity to ill-use all the persons of whom he stood in need, when he could not frighten them into compliance, and did not judge it his interest to be useful to them. Insatiable ambition, the thirst of raising their respective fortunes, not so much from real want as from the desire to surpass others, inspired all men with a vile propensity to injure one another, and with a secret jealousy, which is the more dangerous, as it puts on the mask of benevolence, to carry its point with greater security. In a word, there arose rivalry and competition on the one hand, and conflicting interests on the other, together with a secret desire on both of profiting at the expense of others. All these evils were the first effects of property, and the inseparable attendants of growing inequality.

Before the invention of signs to represent riches, wealth could hardly consist in anything but lands and cattle, the only real possessions men can have. But, when inheritances so increased in number and extent as to occupy the whole of the land, and to border on one another, one man could aggrandise himself only at the expense of another; at the same time the supernumeraries, who had been too weak or too indolent to make such acquisitions, and had grown poor without sustaining any loss, because, while they saw everything change around them, they remained still the same, were obliged to receive their subsistence, or steal it, from the rich; and this soon bred, according to their different characters, dominion and slavery, or violence and rapine. The wealthy, on their part, had no sooner begun to taste the pleasure of command, than they disdained all others, and, using their old slaves to acquire new, thought of nothing but subduing and enslaving their neighbours; like ravenous wolves, which, having once tasted human flesh, despise every other food and thenceforth seek only men to devour.

Thus, as the most powerful or the most miserable considered their might or misery as a kind of right to the possessions of others, equivalent, in their opinion, to that of property, the destruction of equality was attended by the most terrible disorders. Usurpations by the rich, robbery by the poor, and the unbridled passions of both, suppressed the cries of natural compassion and the still feeble voice of justice, and filled men with avarice, ambition and vice. Between the title of the strongest and that of the first occupier, there arose perpetual conflicts, which never ended but in battles and bloodshed. The new-born state of society thus gave rise to a horrible state of war; men thus harassed and depraved were no longer capable of retracing their steps or renouncing the fatal acquisitions they had made, but, labouring by the abuse of the faculties which do them honour, merely to their own confusion, brought themselves to the brink of ruin.

Attonitus novitate mali, divesque miserque,
Effugere optat opes; et quæ modo voverat odit.¹

It is impossible that men should not at length have reflected on so wretched a situation, and on the calamities that overwhelmed them. The rich, in particular, must have felt how much they suffered by a constant state of war, of which they bore all the expense; and in which, though all risked their lives, they alone risked their property. Besides, however speciously they might disguise their usurpations, they knew that they were founded on precarious and false titles; so that, if others took from them by force what they themselves had gained by force, they would have no reason to complain. Even those who had been enriched by their own industry, could hardly base their proprietorship on better claims. It was in vain to repeat, "I built this well; I gained this spot by my industry." Who gave you your standing, it might be answered, and what right have you to demand payment of us

¹ Ovid, *Metamorphoses* xi. 127:

Both rich and poor, shocked at their new-found ills,
Would fly from wealth, and lose what they had sought.

for doing what we never asked you to do? Do you not know that numbers of your fellow-creatures are starving, for want of what you have too much of? You ought to have had the express and universal consent of mankind, before appropriating more of the common subsistence than you needed for your own maintenance. Destitute of valid reasons to justify and sufficient strength to defend himself, able to crush individuals with ease, but easily crushed himself by a troop of bandits, one against all, and incapable, on account of mutual jealousy, of joining with his equals against numerous enemies united by the common hope of plunder, the rich man, thus urged by necessity, conceived at length the profoundest plan that ever entered the mind of man: this was to employ in his favour the forces of those who attacked him, to make allies of his adversaries, to inspire them with different maxims, and to give them other institutions as favourable to himself as the law of nature was unfavourable.

With this view, after having represented to his neighbours the horror of a situation which armed every man against the rest, and made their possessions as burdensome to them as their wants, and in which no safety could be expected either in riches or in poverty, he readily devised plausible arguments to make them close with his design. "Let us join," said he, "to guard the weak from oppression, to restrain the ambitious, and secure to every man the possession of what belongs to him: let us institute rules of justice and peace, to which all without exception may be obliged to conform; rules that may in some measure make amends for the caprices of fortune, by subjecting equally the powerful and the weak to the observance of reciprocal obligations. Let us, in a word, instead of turning our forces against ourselves, collect them in a supreme power which may govern us by wise laws, protect and defend all the members of the association, repulse their common enemies, and maintain eternal harmony among us."

Far fewer words to this purpose would have been enough to impose on men so barbarous and easily seduced; especially as they had too many disputes among themselves to do without arbitrators, and too much ambition and avarice to go long

without masters. All ran headlong to their chains, in hopes of securing their liberty; for they had just wit enough to perceive the advantages of political institutions, without experience enough to enable them to foresee the dangers. The most capable of foreseeing the dangers were the very persons who expected to benefit by them; and even the most prudent judged it not inexpedient to sacrifice one part of their freedom to ensure the rest; as a wounded man has his arm cut off to save the rest of his body.

Such was, or may well have been, the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals, subjected all mankind to perpetual labour, slavery and wretchedness. It is easy to see how the establishment of one community made that of all the rest necessary, and how, in order to make head against united forces, the rest of mankind had to unite in turn. Societies soon multiplied and spread over the face of the earth, till hardly a corner of the world was left in which a man could escape the yoke, and withdraw his head from beneath the sword which he saw perpetually hanging over him by a thread. Civil right having thus become the common rule among the members of each community, the law of nature maintained its place only between different communities, where, under the name of the right of nations, it was qualified by certain tacit conventions, in order to make commerce practicable, and serve as a substitute for natural compassion, which lost, when applied to societies, almost all the influence it had over individuals, and survived no longer except in some great cosmopolitan spirits, who, breaking down the imaginary barriers that separate different peoples, follow the example of our Sovereign Creator, and include the whole human race in their benevolence.

But bodies politic, remaining thus in a state of nature among themselves, presently experienced the inconveniences which had obliged individuals to forsake it; for this state be-

came still more fatal to these great bodies than it had been to the individuals of whom they were composed. Hence arose national wars, battles, murders, and reprisals, which shock nature and outrage reason; together with all those horrible prejudices which class among the virtues the honour of shedding human blood. The most distinguished men hence learned to consider cutting each other's throats a duty; at length men massacred their fellow-creatures by thousands without so much as knowing why, and committed more murders in a single day's fighting, and more violent outrages in the sack of a single town, than were committed in the state of nature during whole ages over the whole earth. Such were the first effects which we can see to have followed the division of mankind into different communities. But let us return to their institutions.

I know that some writers have given other explanations of the origin of political societies, such as the conquest of the powerful, or the association of the weak. It is, indeed, indifferent to my argument which of these causes we choose. That which I have just laid down, however, appears to me the most natural for the following reasons. First: because, in the first case, the right of conquest, being no right in itself, could not serve as a foundation on which to build any other; the victor and the vanquished people still remain with respect to each other in the state of war, unless the vanquished, restored to the full possession of their liberty, voluntarily made choice of the victor for their chief. For till then, whatever capitulation may have been made being founded on violence, and therefore *ipso facto* void, there could not have been on this hypothesis either a real society or body politic, or any law other than that of the strongest. Secondly: because the words *strong* and *weak* are, in the second case, ambiguous; for during the interval between the establishment of a right of property, or prior occupancy, and that of political government, the meaning of these words is better expressed by the terms *rich* and *poor*: because, in fact, before the institution of laws, men had no other way of reducing their equals to submission, than by attacking their goods, or making some of their own over to

them. Thirdly: because, as the poor had nothing but their freedom to lose, it would have been in the highest degree absurd for them to resign voluntarily the only good they still enjoyed, without getting anything in exchange: whereas the rich having feelings, if I may so express myself, in every part of their possessions, it was much easier to harm them, and therefore more necessary for them to take precautions against it; and, in short, because it is more reasonable to suppose a thing to have been invented by those to whom it would be of service, than by those whom it must have harmed.

Government had, in its infancy, no regular and constant form. The want of experience and philosophy prevented men from seeing any but present inconveniences, and they thought of providing against others only as they presented themselves. In spite of the endeavours of the wisest legislators, the political state remained imperfect, because it was little more than the work of chance; and, as it had begun ill, though time revealed its defects and suggested remedies, the original faults were never repaired. It was continually being patched up, when the first task should have been to get the site cleared and all the old materials removed, as was done by Lycurgus at Sparta, if a stable and lasting edifice was to be erected. Society consisted at first merely of a few general conventions, which every member bound himself to observe; and for the performance of covenants the whole body went security to each individual. Experience only could show the weakness of such a constitution, and how easily it might be infringed with impunity, from the difficulty of convicting men of faults, where the public alone was to be witness and judge: the laws could not but be eluded in many ways; disorders and inconveniences could not but multiply continually, till it became necessary to commit the dangerous trust of public authority to private persons, and the care of enforcing obedience to the deliberations of the people to the magistrate. For to say that chiefs were chosen before the confederacy was formed, and that the administrators of the laws were there before the laws themselves, is too absurd a supposition to consider seriously.

It would be as unreasonable to suppose that men at first

threw themselves irretrievably and unconditionally into the arms of an absolute master, and that the first expedient which proud and unsubdued men hit upon for their common security was to run headlong into slavery. For what reason, in fact, did they take to themselves superiors, if it was not in order that they might be defended from oppression, and have protection for their lives, liberties and properties, which are, so to speak, the constituent elements of their being? Now, in the relations between man and man, the worst that can happen is for one to find himself at the mercy of another, and it would have been inconsistent with common-sense to begin by bestowing on a chief the only things they wanted his help to preserve. What equivalent could he offer them for so great a right? And if he had presumed to exact it under pretext of defending them, would he not have received the answer recorded in the fable: "What more can the enemy do to us?" It is therefore beyond dispute, and indeed the fundamental maxim of all political right, that people have set up chiefs to protect their liberty, and not to enslave them. *If we have a prince*, said Pliny to Trajan, *it is to save ourselves from having a master.*

Politicians indulge in the same sophistry about the love of liberty as philosophers about the state of nature. They judge, by what they see, of very different things, which they have not seen; and attribute to man a natural propensity to servitude, because the slaves within their observation are seen to bear the yoke with patience; they fail to reflect that it is with liberty as with innocence and virtue; the value is known only to those who possess them, and the taste for them is forfeited when they are forfeited themselves. "I know the charms of your country," said Brasidas to a Satrap, who was comparing the life at Sparta with that at Persepolis, "but you cannot know the pleasures of mine."

An unbroken horse erects his mane, paws the ground and starts back impetuously at the sight of the bridle; while one which is properly trained suffers patiently even whip and spur: so savage man will not bend his neck to the yoke to which civilised man submits without a murmur, but prefers

the most turbulent state of liberty to the most peaceful slavery. We cannot therefore, from the servility of nations already enslaved, judge of the natural disposition of mankind for or against slavery; we should go by the prodigious efforts of every free people to save itself from oppression. I know that the former are for ever holding forth in praise of the tranquillity they enjoy in their chains, and that they call a state of wretched servitude a state of peace: *miserrimam servitutem pacem appellant*.² But when I observe the latter sacrificing pleasure, peace, wealth, power and life itself to the preservation of that one treasure, which is so disdained by those who have lost it; when I see free-born animals dash their brains out against the bars of their cage, from an innate impatience of captivity; when I behold numbers of naked savages, that despise European pleasures, braving hunger, fire, the sword and death, to preserve nothing but their independence, I feel that it is not for slaves to argue about liberty.

With regard to paternal authority, from which some writers have derived absolute government and all society, it is enough, without going back to the contrary arguments of Locke and Sidney, to remark that nothing on earth can be further from the ferocious spirit of despotism than the mildness of that authority which looks more to the advantage of him who obeys than to that of him who commands; that, by the law of nature, the father is the child's master no longer than his help is necessary; that from that time they are both equal, the son being perfectly independent of the father, and owing him only respect and not obedience. For gratitude is a duty which ought to be paid, but not a right to be exacted: instead of saying that civil society is derived from paternal authority, we ought to say rather that the latter derives its principal force from the former. No individual was ever acknowledged as the father of many, till his sons and daughters remained settled around him. The goods of the father, of which he is really the master, are the ties which keep his

² Tacitus, Hist. iv. 17. The most wretched slavery they call peace.

children in dependence, and he may bestow on them, if he pleases, no share of his property, unless they merit it by constant deference to his will. But the subjects of an arbitrary despot are so far from having the like favour to expect from their chief, that they themselves and everything they possess are his property, or at least are considered by him as such; so that they are forced to receive, as a favour, the little of their own he is pleased to leave them. When he despoils them, he does but justice, and mercy in that he permits them to live.

By proceeding thus to test fact by right, we should discover as little reason as truth in the voluntary establishment of tyranny. It would also be no easy matter to prove the validity of a contract binding on only one of the parties, where all the risk is on one side, and none on the other; so that no one could suffer but he who bound himself. This hateful system is indeed, even in modern times, very far from being that of wise and good monarchs, and especially of the kings of France; as may be seen from several passages in their edicts; particularly from the following passage in a celebrated edict published in 1667 in the name and by order of Louis XIV.

"Let it not, therefore, be said that the Sovereign is not subject to the laws of his State; since the contrary is a true proposition of the right of nations, which flattery has sometimes attacked but good princes have always defended as the tutelary divinity of their dominions. How much more legitimate is it to say with the wise Plato, that the perfect felicity of a kingdom consists in the obedience of subjects to their prince, and of the prince to the laws, and in the laws being just and constantly directed to the public good!"³

I shall not stay here to inquire whether, as liberty is the noblest faculty of man, it is not degrading our very nature, reducing ourselves to the level of the brutes, which are mere slaves of instinct, and even an affront to the Author of our being, to renounce without reserve the most precious of all His gifts, and to bow to the necessity of committing all the

³ Of the Rights of the Most Christian Queen over various States of the Monarchy of Spain, 1667.

crimes He has forbidden, merely to gratify a mad or a cruel master; or if this sublime craftsman ought not to be less angered at seeing His workmanship entirely destroyed than thus dishonoured. I will waive (if my opponents please) the authority of Barbeyrac, who, following Locke, roundly declares that no man can so far sell his liberty as to submit to an arbitrary power which may use him as it likes. *For*, he adds, *this would be to sell his own life, of which he is not master*. I shall ask only what right those who were not afraid thus to debase themselves could have to subject their posterity to the same ignominy, and to renounce for them those blessings which they do not owe to the liberality of their progenitors, and without which life itself must be a burden to all who are worthy of it.

Puffendorf says that we may divest ourselves of our liberty in favour of other men, just as we transfer our property from one to another by contracts and agreements. But this seems a very weak argument. For in the first place, the property I alienate becomes quite foreign to me, nor can I suffer from the abuse of it; but it very nearly concerns me that my liberty should not be abused, and I cannot without incurring the guilt of the crimes I may be compelled to commit, expose myself to become an instrument of crime. Besides, the right of property being only a convention of human institution, men may dispose of what they possess as they please: but this is not the case with the essential gifts of nature, such as life and liberty, which every man is permitted to enjoy, and of which it is at least doubtful whether any have a right to divest themselves. By giving up the one, we degrade our being; by giving up the other, we do our best to annul it; and, as no temporal good can indemnify us for the loss of either, it would be an offence against both reason and nature to renounce them at any price whatsoever. But, even if we could transfer our liberty, as we do our property, there would be a great difference with regard to the children, who enjoy the father's substance only by the transmission of his right; whereas, liberty being a gift which they hold from nature as being men, their parents have no right whatever to deprive them of it. As then, to

establish slavery, it was necessary to do violence to nature, so, in order to perpetuate such a right, nature would have to be changed. Jurists, who have gravely determined that the child of a slave comes into the world a slave, have decided, in other words, that a man shall come into the world not a man.

I regard it then as certain, that government did not begin with arbitrary power, but that this is the deprivation, the extreme term, of government, and brings it back, finally, to just the law of the strongest, which it was originally designed to remedy. Supposing, however, it had begun in this manner, such power, being in itself illegitimate, could not have served as a basis for the laws of society, nor, consequently, for the inequality they instituted.

Without entering at present upon the investigations which still remain to be made into the nature of the fundamental compact underlying all government, I content myself with adopting the common opinion concerning it, and regard the establishment of the political body as a real contract between the people and the chiefs chosen by them: a contract by which both parties bind themselves to observe the laws therein expressed, which form the ties of their union. The people having in respect of their social relations concentrated all their wills in one, the several articles, concerning which this will is explained, become so many fundamental laws, obligatory on all the members of the State without exception, and one of these articles regulates the choice and power of the magistrates appointed to watch over the execution of the rest. This power extends to everything which may maintain the constitution, without going so far as to alter it. It is accompanied by honours, in order to bring the laws and their administrators into respect. The ministers are also distinguished by personal prerogatives, in order to recompense them for the cares and labour which good administration involves. The magistrate, on his side, binds himself to use the power he is entrusted with only in conformity with the intention of his constituents, to maintain them all in the peaceable possession of what belongs to them, and to prefer on every occasion the public interest to his own.

Before experience had shown, or knowledge of the human heart enabled men to foresee, the unavoidable abuses of such a constitution, it must have appeared so much the more excellent, as those who were charged with the care of its preservation had themselves most interest in it; for magistracy and the rights attaching to it being based solely on the fundamental laws, the magistrates would cease to be legitimate as soon as these ceased to exist; the people would no longer owe them obedience; and as not the magistrates, but the laws, are essential to the being of a State, the members of it would regain the right to their natural liberty.

If we reflect with ever so little attention on this subject, we shall find new arguments to confirm this truth, and be convinced from the very nature of the contract that it cannot be irrevocable: for, if there were no superior power capable of ensuring the fidelity of the contracting parties, or compelling them to perform their reciprocal engagements, the parties would be sole judges in their own cause, and each would always have a right to renounce the contract, as soon as he found that the other had violated its terms, or that they no longer suited his convenience. It is upon this principle that the right of abdication may possibly be founded. Now, if, as here, we consider only what is human in this institution, it is certain that, if the magistrate, who has all the power in his own hands, and appropriates to himself all the advantages of the contract, has none the less a right to renounce his authority, the people, who suffer for all the faults of their chief, must have a much better right to renounce their dependence. But the terrible and innumerable quarrels and disorders that would necessarily arise from so dangerous a privilege, show, more than anything else, how much human governments stood in need of a more solid basis than mere reason, and how expedient it was for the public tranquillity that the divine will should interpose to invest the sovereign authority with a sacred and inviolable character, which might deprive subjects of the fatal right of disposing of it. If the world had received no other advantages from religion, this would be enough to impose on men the duty of adopting and cultivating it, abuses

and all, since it has been the means of saving more blood than fanaticism has ever spilt. But let us follow the thread of our hypothesis.

The different forms of government owe their origin to the differing degrees of inequality which existed between individuals at the time of their institution. If there happened to be any one man among them pre-eminent in power, virtue, riches or personal influence, he became sole magistrate, and the State assumed the form of monarchy. If several, nearly equal in point of eminence, stood above the rest, they were elected jointly, and formed an aristocracy. Again, among a people who had deviated less from a state of nature, and between whose fortune or talents there was less disproportion, the supreme administration was retained in common, and a democracy was formed. It was discovered in process of time which of these forms suited men the best. Some peoples remained altogether subject to the laws; others soon came to obey their magistrates. The citizens laboured to preserve their liberty; the subjects, irritated at seeing others enjoying a blessing they had lost, thought only of making slaves of their neighbours. In a word, on the one side arose riches and conquests, and on the other happiness and virtue.

In these different governments, all the offices were at first elective; and when the influence of wealth was out of the question, the preference was given to merit, which gives a natural ascendancy, and to age, which is experienced in business and deliberate in council. The Elders of the Hebrews, the Gerontes at Sparta, the Senate at Rome, and the very etymology of our word *Seigneur*, show how old age was once held in veneration. But the more often the choice fell upon old men, the more often elections had to be repeated, and the more they became a nuisance; intrigues set in, factions were formed, party feeling grew bitter, civil wars broke out; the lives of individuals were sacrificed to the pretended happiness of the State; and at length men were on the point of relapsing into their primitive anarchy. Ambitious chiefs profited by these circumstances to perpetuate their offices in their own families: at the same time the people, already used to depend-

ence, ease, and the conveniences of life, and already incapable of breaking its fetters, agreed to an increase of its slavery, in order to secure its tranquillity. Thus magistrates, having become hereditary, contracted the habit of considering their offices as a family estate, and themselves as proprietors of the communities of which they were at first only the officers, of regarding their fellow-citizens as their slaves, and numbering them, like cattle, among their belongings, and of calling themselves the equals of the gods and kings of kings.

If we follow the progress of inequality in these various revolutions, we shall find that the establishment of laws and of the right of property was its first term, the institution of magistracy the second, and the conversion of legitimate into arbitrary power the third and last; so that the condition of rich and poor was authorised by the first period; that of powerful and weak by the second; and only by the third that of master and slave, which is the last degree of inequality, and the term at which all the rest remain, when they have got so far, till the government is either entirely dissolved by new revolutions, or brought back again to legitimacy.

To understand this progress as necessary we must consider not so much the motives for the establishment of the body politic, as the forms it assumes in actuality, and the faults that necessarily attend it: for the flaws which make social institutions necessary are the same as make the abuse of them unavoidable. If we except Sparta, where the laws were mainly concerned with the education of children, and where Lycurgus established such morality as practically made laws needless—for laws as a rule, being weaker than the passions, restrain men without altering them—it would not be difficult to prove that every government, which scrupulously complied with the ends for which it was instituted, and guarded carefully against change and corruption, was set up unnecessarily. For a country, in which no one either evaded the laws or made a bad use of magisterial power, could require neither laws nor magistrates.

Political distinctions necessarily produce civil distinctions. The growing equality between the chiefs and the people is

soon felt by individuals, and modified in a thousand ways according to passions, talents and circumstances. The magistrate could not usurp any illegitimate power, without giving distinction to the creatures with whom he must share it. Besides, individuals only allow themselves to be oppressed so far as they are hurried on by blind ambition, and, looking rather below than above them, come to love authority more than independence, and submit to slavery, that they may in turn enslave others. It is no easy matter to reduce to obedience a man who has no ambition to command; nor would the most adroit politician find it possible to enslave a people whose only desire was to be independent. But inequality easily makes its way among cowardly and ambitious minds, which are ever ready to run the risks of fortune, and almost indifferent whether they command or obey, as it is favourable or adverse. Thus, there must have been a time, when the eyes of the people were so fascinated, that their rulers had only to say to the least of men, "Be great, you and all your posterity," to make him immediately appear great in the eyes of every one as well as in his own. His descendants took still more upon them, in proportion to their distance from him; the more obscure and uncertain the cause, the greater the effect: the greater the number of idlers one could count in a family, the more illustrious it was held to be.

If this were the place to go into details, I could readily explain how, even without the intervention of government, inequality of credit and authority became unavoidable among private persons, as soon as their union in a single society made them compare themselves one with another, and take into account the differences which they found out from the continual intercourse every man had to have with his neighbours.⁴

⁴ Distributive justice would oppose this rigorous equality of the state of nature, even were it practicable in civil society; as all the members of the State owe it their services in proportion to their talents and abilities, they ought, on their side, to be distinguished and favoured in proportion to the services they have actually rendered. It is in this sense we must understand that passage of Isocrates, in which he extols the primitive Athenians, for having deter-

These differences are of several kinds; but riches, nobility or rank, power and personal merit being the principal distinctions by which men form an estimate of each other in society, I could prove that the harmony or conflict of these different forces is the surest indication of the good or bad constitution of a State. I could show that among these four kinds of inequality, personal qualities being the origin of all the others, wealth is the one to which they are all reduced in the end; for, as riches tend most immediately to the prosperity of individuals, and are easiest to communicate, they are used to purchase every other distinction. By this observation we are enabled to judge pretty exactly how far a people has departed from its primitive constitution, and of its progress towards the extreme term of corruption. I could explain how much this universal desire for reputation, honours and advancement, which inflames us all, exercises and holds up to com-

mined which of the two kinds of equality was the most useful, viz. that which consists in dividing the same advantages indiscriminately among all the citizens, or that which consists in distributing them to each according to his deserts. These able politicians, adds the orator, banishing that unjust inequality which makes no distinction between good and bad men, adhered inviolably to that which rewards and punishes every man according to his deserts.

But in the first place, there never existed a society, however corrupt some may have become, where no difference was made between the good and the bad; and with regard to morality, where no measures can be prescribed by law exact enough to serve as a practical rule for a magistrate, it is with great prudence that, in order not to leave the fortune or quality of the citizens to his discretion, it prohibits him from passing judgment on persons and confines his judgment to actions. Only morals such as those of the ancient Romans can bear censors, and such a tribunal among us would throw everything into confusion. The difference between good and bad men is determined by public esteem; the magistrate being strictly a judge of right alone; whereas the public is the truest judge of morals, and is of such integrity and penetration on this head, that although it maybe sometimes deceived, it can never be corrupted. The rank of citizens ought, therefore, to be regulated, not according to their personal merit—for this would put it in the power of the magistrate to apply the law almost arbitrarily—but according to the actual services done to the State, which are capable of being more exactly estimated.

parison our faculties and powers; how it excites and multiplies our passions, and, by creating universal competition and rivalry, or rather enmity, among men, occasions numberless failures, successes and disturbances of all kinds by making so many aspirants run the same course. I could show that it is to this desire of being talked about, and this unremitting rage of distinguishing ourselves, that we owe the best and the worst things we possess, both our virtues and our vices, our science and our errors, our conquerors and our philosophers; that is to say, a great many bad things, and a very few good ones. In a word, I could prove that, if we have a few rich and powerful men on the pinnacle of fortune and grandeur, while the crowd grovels in want and obscurity, it is because the former prize what they enjoy only in so far as others are destitute of it; and because, without changing their condition, they would cease to be happy the moment the people ceased to be wretched.

These details alone, however, would furnish matter for a considerable work, in which the advantages and disadvantages of every kind of government might be weighed, as they are related to man in the state of nature, and at the same time all the different aspects, under which inequality has up to the present appeared, or may appear in ages yet to come, according to the nature of the several governments, and the alterations which time must unavoidably occasion in them, might be demonstrated. We should then see the multitude oppressed from within, in consequence of the very precautions it had taken to guard against foreign tyranny. We should see oppression continually gain ground without it being possible for the oppressed to know where it would stop, or what legitimate means was left them of checking its progress. We should see the rights of citizens, and the freedom of nations slowly extinguished, and the complaints, protests and appeals of the weak treated as seditious murmurings. We should see the honour of defending the common cause confined by statecraft to a mercenary part of the people. We should see taxes made necessary by such means, and the disheartened husbandman deserting his fields even in the midst of peace, and leav-

ing the plough to gird on the sword. We should see fatal and capricious codes of honour established; and the champions of their country sooner or later becoming its enemies, and for ever holding their daggers to the breasts of their fellow-citizens. The time would come when they would be heard saying to the oppressor of their country—

Pectore si fratris gladium juguloque parentis
Condere me jubeas, gravidæque in viscera partu
Conjugis, invitâ peragam tamen omnia dextrâ.

Lucan. i. 376.

From great inequality of fortunes and conditions, from the vast variety of passions and of talents, of useless and pernicious arts, of vain sciences, would arise a multitude of prejudices equally contrary to reason, happiness and virtue. We should see the magistrates fomenting everything that might weaken men united in society, by promoting dissension among them; everything that might sow in it the seeds of actual division, while it gave society the air of harmony; everything that might inspire the different ranks of people with mutual hatred and distrust, by setting the rights and interests of one against those of another, and so strengthen the power which comprehended them all.

It is from the midst of this disorder and these revolutions, that despotism, gradually raising up its hideous head and devouring everything that remained sound and untainted in any part of the State, would at length trample on both the laws and the people, and establish itself on the ruins of the republic. The times which immediately preceded this last change would be times of trouble and calamity; but at length the monster would swallow up everything, and the people would no longer have either chiefs or laws, but only tyrants. From this moment there would be no question of virtue or morality; for despotism *cui ex honesto nulla est spes*, wherever it prevails, admits no other master; it no sooner speaks than probity and duty lose their weight and blind obedience is the only virtue which slaves can still practise.

This is the last term of inequality, the extreme point that closes the circle, and meets that from which we set out. Here

all private persons return to their first equality, because they are nothing; and, subjects having no law but the will of their master, and their master no restraint but his passions, all notions of good and all principles of equity again vanish. There is here a complete return to the law of the strongest, and so to a new state of nature, differing from that we set out from; for the one was a state of nature in its first purity, while this is the consequence of excessive corruption. There is so little difference between the two states in other respects, and the contract of government is so completely dissolved by despotism, that the despot is master only so long as he remains the strongest; as soon as he can be expelled, he has no right to complain of violence. The popular insurrection that ends in the death or deposition of a Sultan is as lawful an act as those by which he disposed, the day before, of the lives and fortunes of his subjects. As he was maintained by force alone, it is force alone that overthrows him. Thus everything takes place according to the natural order; and, whatever may be the result of such frequent and precipitate revolutions, no one man has reason to complain of the injustice of another, but only of his own ill-fortune or indiscretion.

If the reader thus discovers and retraces the lost and forgotten road, by which man must have passed from the state of nature to the state of society; if he carefully restores, along with the intermediate situations which I have just described, those which want of time has compelled me to suppress, or my imagination has failed to suggest, he cannot fail to be struck by the vast distance which separates the two states. It is in tracing this slow succession that he will find the solution of a number of problems of politics and morals, which philosophers cannot settle. He will feel that, men being different in different ages, the reason why Diogenes could not find a man was that he sought among his contemporaries a man of an earlier period. He will see that Cato died with Rome and liberty, because he did not fit the age in which he lived; the greatest of men served only to astonish a world which he would certainly have ruled, had he lived five hundred years sooner. In a word, he will explain how the soul and the passions of men insensibly change their very nature; why our

wants and pleasures in the end seek new objects; and why, the original man having vanished by degrees, society offers to us only an assembly of artificial men and factitious passions, which are the work of all these new relations, and without any real foundation in nature. We are taught nothing on this subject, by reflection, that is not entirely confirmed by observation. The savage and the civilised man differ so much in the bottom of their hearts and in their inclinations, that what constitutes the supreme happiness of one would reduce the other to despair. The former breathes only peace and liberty; he desires only to live and be free from labour; even the *ataraxia* of the Stoic falls far short of his profound indifference to every other object. Civilised man, on the other hand, is always moving, sweating, toiling and racking his brains to find still more laborious occupations: he goes on in drudgery to his last moment, and even seeks death to put himself in a position to live, or renounces life to acquire immortality. He pays his court to men in power, whom he hates, and to the wealthy, whom he despises; he stops at nothing to have the honour of serving them; he is not ashamed to value himself on his own meanness and their protection; and, proud of his slavery, he speaks with disdain of those, who have not the honour of sharing it. What a sight would the perplexing and envied labours of a European minister of State present to the eyes of a Caribbean! How many cruel deaths would not this indolent savage prefer to the horrors of such a life, which is seldom even sweetened by the pleasure of doing good! But, for him to see into the motives of all this solicitude, the words *power* and *reputation*, would have to bear some meaning in his mind; he would have to know that there are men who set a value on the opinion of the rest of the world; who can be made happy and satisfied with themselves rather on the testimony of other people than on their own. In reality, the source of all these differences is, that the savage lives within himself, while social man lives constantly outside himself, and only knows how to live in the opinion of others, so that he seems to receive the consciousness of his own existence merely from the judgment of others concerning him. It is not to my pres-

ent purpose to insist on the indifference to good and evil which arises from this disposition, in spite of our many fine works on morality, or to show how, everything being reduced to appearances, there is but art and mummery in even honour, friendship, virtue, and often vice itself, of which we at length learn the secret of boasting; to show, in short, how, always asking others what we are, and never daring to ask ourselves, in the midst of so much philosophy, humanity and civilisation, and of such sublime codes of morality, we have nothing to show for ourselves but a frivolous and deceitful appearance, honour without virtue, reason without wisdom, and pleasure without happiness. It is sufficient that I have proved that this is not by any means the original state of man, but that it is merely the spirit of society, and the inequality which society produces, that thus transform and alter all our natural inclinations.

I have endeavoured to trace the origin and progress of inequality, and the institution and abuse of political societies, as far as these are capable of being deduced from the nature of man merely by the light of reason, and independently of those sacred dogmas which give the sanction of divine right to sovereign authority. It follows from this survey that, as there is hardly any inequality in the state of nature, all the inequality which now prevails owes its strength and growth to the development of our faculties and the advance of the human mind, and becomes at last permanent and legitimate by the establishment of property and laws. Secondly, it follows that moral inequality, authorised by positive right alone, clashes with natural right, whenever it is not proportionate to physical inequality; a distinction which sufficiently determines what we ought to think of that species of inequality which prevails in all civilised countries; since it is plainly contrary to the law of nature, however defined, that children should command old men, fools wise men, and that the privileged few should gorge themselves with superfluities, while the starving multitude are in want of the bare necessities of life.

Henry David Thoreau

CIVIL DISOBEDIENCE

Henry David Thoreau

[1817-1862]

A Yankee non-conformist, a philosophic rebel, and a master of lean, incisive prose, Henry David Thoreau is today one of the most influential of all American writers. More eloquently than any other he exhorts the individual to uphold his natural dignity and integrity in the face of the institutions, conventions and beliefs that seek to enslave him. His friendship with Emerson, his solitary sojourn at Walden Pond, his fight for John Brown and the Abolitionists—these were the highlights of a quiet, uneventful life in Concord, Mass., a life dedicated to living, as he said, close to the bone and to the rigorous observation of nature. In *Civil Disobedience*, he tells why he went to jail rather than pay a tax to a government which condoned human slavery. A favorite essay both of Tolstoy and Gandhi, it is perhaps the most effective statement that has ever been made against government as coercion and for the right of the individual to obey the dictates of his conscience rather than the dictates of the state.

CIVIL DISOBEDIENCE

HENRY DAVID THOREAU

I heartily accept the motto,—“That government is best which governs least;” and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe,—“That government is best which governs not at all;” and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient. The objections which have been brought against a standing army, and they are many and weighty, and deserve to prevail, may also at last be brought against a standing government. The standing army is only an arm of the standing government. The government itself, which is only the mode which the people have chosen to execute their will, is equally liable to be abused and perverted before the people can act through it. Witness the present Mexican war, the work of comparatively a few individuals using the standing government as their tool; for, in the outset, the people would not have consented to this measure.

This American government,—what is it but a tradition, though a recent one, endeavoring to transmit itself unimpaired to posterity, but each instant losing some of its integrity? It has not the vitality and force of a single living man; for a single man can bend it to his will. It is a sort of wooden gun to the people themselves. But it is not the less

necessary for this; for the people must have some complicated machinery or other, and hear its din, to satisfy that idea of government which they have. Governments show thus how successfully men can be imposed on, even impose on themselves, for their own advantage. It is excellent, we must all allow. Yet this government never of itself furthered any enterprise, but by the alacrity with which it got out of its way. *It* does not keep the country free. *It* does not settle the West. *It* does not educate. The character inherent in the American people has done all that has been accomplished; and it would have done somewhat more, if the government had not sometimes got in its way. For government is an expedient by which men would fain succeed in letting one another alone; and, as has been said, when it is most expedient, the governed are most let alone by it. Trade and commerce, if they were not made of India-rubber, would never manage to bounce over the obstacles which legislators are continually putting in their way; and, if one were to judge these men wholly by the effects of their actions and not partly by their intentions, they would deserve to be classed and punished with those mischievous persons who put obstructions on the railroads.

But, to speak practically and as a citizen, unlike those who call themselves no-government men, I ask for, not at once no government, but *at once* a better government. Let every man make known what kind of government would command his respect, and that will be one step toward obtaining it.

After all, the practical reason why, when the power is once in the hands of the people, a majority are permitted, and for a long period continue, to rule is not because they are most likely to be in the right, nor because this seems fairest to the minority, but because they are physically the strongest. But a government in which the majority rule in all cases cannot be based on justice, even as far as men understand it. Can there not be a government in which majorities do not virtually decide right and wrong, but conscience?—in which majorities decide only those questions to which the rule of expediency is applicable? Must the citizen ever for a moment, or in the least degree, resign his conscience to the

legislator? Why has every man a conscience, then? I think that we should be men first, and subjects afterward. It is not desirable to cultivate a respect for the law, so much as for the right. The only obligation which I have a right to assume is to do at any time what I think right. It is truly enough said, that a corporation has no conscience; but a corporation of conscientious men is a corporation *with* a conscience. Law never made men a whit more just; and, by means of their respect for it, even the well-disposed are daily made the agents of injustice. A common and natural result of an undue respect for law is, that you may see a file of soldiers, colonel, captain, corporal, privates, powder-monkeys, and all, marching in admirable order over hill and dale to the wars, against their wills, ay, against their common sense and consciences, which makes it very steep marching indeed, and produces a palpitation of the heart. They have no doubt that it is a damnable business in which they are concerned; they are all peaceably inclined. Now, what are they? Men at all? or small movable forts and magazines, at the service of some unscrupulous man in power? Visit the Navy-Yard, and behold a marine, such a man as an American government can make, or such as it can make a man with its black arts,—a mere shadow and reminiscence of humanity, a man laid out alive and standing, and already, as one may say, buried under arms with funeral accompaniments, though it may be,—

“Not a drum was heard, not a funeral note,
As his corse to the rampart we hurried;
Not a soldier discharged his farewell shot
O’er the grave where our hero we buried.”

The mass of men serve the state thus, not as men mainly, but as machines, with their bodies. They are the standing army, and the militia, jailors, constables, posse comitatus, etc. In most cases there is no free exercise whatever of the judgment or of the moral sense; but they put themselves on a level with wood and earth and stones; and wooden men can perhaps be manufactured that will serve the purpose as well. Such command no more respect than men of straw or a lump

of dirt. They have the same sort of worth only as horses and dogs. Yet such as these even are commonly esteemed good citizens. Others—as most legislators, politicians, lawyers, ministers, and office-holders—serve the state chiefly with their heads; and, as they rarely make any moral distinctions, they are as likely to serve the Devil, without *intending* it, as God. A very few, as heroes, patriots, martyrs, reformers in the great sense, and *men*, serve the state with their consciences also, and so necessarily resist it for the most part; and they are commonly treated as enemies by it. A wise man will only be useful as a man, and will not submit to be “clay,” and “stop a hole to keep the wind away,” but leave that office to his dust at least:—

“I am too high-born to be propertied,
To be a secondary at control,
Or useful serving-man and instrument
To any sovereign state throughout the world.”

He who gives himself entirely to his fellow-men appears to them useless and selfish; but he who gives himself partially to them is pronounced a benefactor and philanthropist.

How does it become a man to behave toward this American government to-day? I answer, that he cannot without disgrace be associated with it. I cannot for an instant recognize that political organization as *my* government which is the *slave's* government also.

All men recognize the right of revolution; that is, the right to refuse allegiance to, and to resist, the government, when its tyranny or its inefficiency are great and unendurable. But almost all say that such is not the case now. But such was the case, they think, in the Revolution of '75. If one were to tell me that this was a bad government because it taxed certain foreign commodities brought to its ports, it is most probable that I should not make an ado about it, for I can do without them. All machines have their friction; and possibly this does enough good to counterbalance the evil. At any rate, it is a great evil to make a stir about it. But when the friction comes to have its machine, and oppression and robbery are or-

ganized, I say, let us not have such a machine any longer. In other words, when a sixth of the population of a nation which has undertaken to be the refuge of liberty are slaves, and a whole country is unjustly overrun and conquered by a foreign army, and subjected to military law, I think that it is not too soon for honest men to rebel and revolutionize. What makes this duty the more urgent is the fact that the country so overrun is not our own, but ours is the invading army.

Paley, a common authority with many on moral questions, in his chapter on the "Duty of Submission to Civil Government," resolves all civil obligation into expediency; and he proceeds to say, "that so long as the interest of the whole society requires it, that is, so long as the established government cannot be resisted or changed without public inconvenience, it is the will of God that the established government be obeyed, and no longer. . . . This principle being admitted, the justice of every particular case of resistance is reduced to a computation of the quantity of the danger and grievance on the one side, and of the probability and expense of redressing it on the other." Of this, he says, every man shall judge for himself. But Paley appears never to have contemplated those cases to which the rule of expediency does not apply, in which a people, as well as an individual, must do justice, cost what it may. If I have unjustly wrested a plank from a drowning man, I must restore it to him though I drown myself. This, according to Paley, would be inconvenient. But he that would save his life, in such a case, shall lose it. This people must cease to hold slaves, and to make war on Mexico, though it cost them their existence as a people.

In their practice, nations agree with Paley; but does any one think that Massachusetts does exactly what is right at the present crisis?

"A drab of state, a cloth-o'-silver slut,

To have her train borne up, and her soul trail in the dirt."

Practically speaking, the opponents to a reform in Massachusetts are not a hundred thousand politicians at the South,

but a hundred thousand merchants and farmers here, who are more interested in commerce and agriculture than they are in humanity, and are not prepared to do justice to the slave and to Mexico, *cost what it may*. I quarrel not with far-off foes, but with those who, near at home, coöperate with, and do the bidding of, those far away, and without whom the latter would be harmless. We are accustomed to say, that the mass of men are unprepared; but improvement is slow, because the few are not materially wiser or better than the many. It is not so important that many should be as good as you, as that there be some absolute goodness somewhere; for that will leaven the whole lump. There are thousands who are *in opinion* opposed to slavery and to the war, who yet in effect do nothing to put an end to them; who, esteeming themselves children of Washington and Franklin, sit down with their hands in their pockets, and say that they know not what to do, and do nothing; who even postpone the question of freedom to the question of free-trade, and quietly read the price-current along with the latest advices from Mexico, after dinner, and, it may be, fall asleep over them both. What is the price-current of an honest man and patriot to-day? They hesitate, and they regret, and sometimes they petition; but they do nothing in earnest and with effect. They will wait, well disposed, for others to remedy the evil, that they may no longer have it to regret. At most, they give only a cheap vote, and a feeble countenance and God-speed, to the right, as it goes by them. There are nine hundred and ninety-nine patrons of virtue to one virtuous man. But it is easier to deal with the real possessor of a thing than with the temporary guardian of it.

All voting is a sort of gaming, like checkers or backgammon, with a slight moral tinge to it, a playing with right and wrong, with moral questions; and betting naturally accompanies it. The character of the voters is not staked. I cast my vote, perchance, as I think right; but I am not vitally concerned that that right should prevail. I am willing to leave it to the majority. Its obligation, therefore, never exceeds that of expediency. Even voting *for the right* is *doing nothing* for

it. It is only expressing to men feebly your desire that it should prevail. A wise man will not leave the right to the mercy of chance, nor wish it to prevail through the power of the majority. There is but little virtue in the action of masses of men. When the majority shall at length vote for the abolition of slavery, it will be because they are indifferent to slavery, or because there is but little slavery left to be abolished by their vote. *They* will then be the only slaves. Only *his* vote can hasten the abolition of slavery who asserts his own freedom by his vote.

I hear of a convention to be held at Baltimore, or elsewhere, for the selection of a candidate for the Presidency, made up chiefly of editors, and men who are politicians by profession; but I think, what is it to any independent, intelligent, and respectable man what decision they may come to? Shall we not have the advantage of his wisdom and honesty, nevertheless? Can we not count upon some independent votes? Are there not many individuals in the country who do not attend conventions? But no: I find that the respectable man, so called, has immediately drifted from his position, and despairs of his country, when his country has more reason to despair of him. He forthwith adopts one of the candidates thus selected as the only *available* one, thus proving that he is himself *available* for any purposes of the demagogue. His vote is of no more worth than that of any unprincipled foreigner or hireling native, who may have been bought. O for a man who is a *man*, and, as my neighbor says, has a bone in his back which you cannot pass your hand through! Our statistics are at fault: the population has been returned too large. How many *men* are there to a square thousand miles in this country? Hardly one. Does not America offer any inducement for men to settle here? The American has dwindled into an Odd Fellow,—one who may be known by the development of his organ of gregariousness, and a manifest lack of intellect and cheerful self-reliance; whose first and chief concern, on coming into the world, is to see that the Almshouses are in good repair; and, before yet he has lawfully donned the virible garb, to collect a fund for the support of the widows and

orphans that may be; who, in short, ventures to live only by the aid of the Mutual Insurance company, which has promised to bury him decently.

It is not a man's duty, as a matter of course, to devote himself to the eradication of any, even the most enormous wrong; he may still properly have other concerns to engage him; but it is his duty, at least, to wash his hands of it, and, if he gives it no thought longer, not to give it practically his support. If I devote myself to other pursuits and contemplations, I must first see, at least, that I do not pursue them sitting upon another man's shoulders. I must get off him first, that he may pursue his contemplations too. See what gross inconsistency is tolerated. I have heard some of my townsmen say, "I should like to have them order me out to help put down an insurrection of the slaves, or to march to Mexico;—see if I would go;" and yet these very men have each, directly by their allegiance, and so indirectly, at least, by their money, furnished a substitute. The soldier is applauded who refuses to serve in an unjust war by those who do not refuse to sustain the unjust government which makes the war; is applauded by those whose own act and authority he disregards and sets at naught; as if the state were penitent to that degree that it hired one to scourge it while it sinned, but not to that degree that it left off sinning for a moment. Thus, under the name of Order and Civil Government, we are all made at last to pay homage to and support our own meanness. After the first blush of sin comes its indifference; and from immoral it becomes, as it were, *unmoral*, and not quite unnecessary to that life which we have made.

The broadest and most prevalent error requires the most disinterested virtue to sustain it. The slight reproach to which the virtue of patriotism is commonly liable, the noble are most likely to incur. Those who, while they disapprove of the character and measures of a government, yield to it their allegiance and support are undoubtedly its most conscientious supporters, and so frequently the most serious obstacles to reform. Some are petitioning the state to dissolve the Union, to disregard the requisitions of the President. Why do they

not dissolve it themselves,—the union between themselves and the state,—and refuse to pay their quota into its treasury? Do not they stand in the same relation to the state that the state does to the Union? And have not the same reasons prevented the state from resisting the Union which have prevented them from resisting the state?

How can a man be satisfied to entertain an opinion merely, and enjoy *it*? Is there any enjoyment in it, if his opinion is that he is aggrieved? If you are cheated out of a single dollar by your neighbor, you do not rest satisfied with knowing that you are cheated, or with saying that you are cheated, or even with petitioning him to pay you your due; but you take effectual steps at once to obtain the full amount, and see that you are never cheated again. Action from principle, the perception and the performance of right, changes things and relations; it is essentially revolutionary, and does not consist wholly with anything which was. It not only divides states and churches, it divides families; ay, it divides the *individual*, separating the diabolical in him from the divine.

Unjust laws exist: shall we be content to obey them, or shall we endeavor to amend them, and obey them until we have succeeded, or shall we transgress them at once? Men generally, under such a government as this, think that they ought to wait until they have persuaded the majority to alter them. They think that, if they should resist, the remedy would be worse than the evil. But it is the fault of the government itself that the remedy *is* worse than the evil. *It* makes it worse. Why is it not more apt to anticipate and provide for reform? Why does it not cherish its wise minority? Why does it cry and resist before it is hurt? Why does it not encourage its citizens to be on the alert to point out its faults, and *do* better than it would have them? Why does it always crucify Christ, and excommunicate Copernicus and Luther, and pronounce Washington and Franklin rebels?

One would think, that a deliberate and practical denial of its authority was the only offense never contemplated by government; else, why has it not assigned its definite, its suitable and proportionate penalty? If a man who has no property

refuses but once to earn nine shillings for the state, he is put in prison for a period unlimited by any law that I know, and determined only by the discretion of those who placed him there; but if he should steal ninety times nine shillings from the state, he is soon permitted to go at large again.

If the injustice is part of the necessary friction of the machine of government, let it go, let it go: perchance it will wear smooth,—certainly the machine will wear out. If the injustice has a spring, or a pulley, or a rope, or a crank, exclusively for itself, then perhaps you may consider whether the remedy will not be worse than the evil; but if it is of such a nature that it requires you to be the agent of injustice to another, then, I say, break the law. Let your life be a counter friction to stop the machine. What I have to do is to see, at any rate, that I do not lend myself to the wrong which I condemn.

As for adopting the ways which the state has provided for remedying the evil, I know not of such ways. They take too much time, and a man's life will be gone. I have other affairs to attend to. I came into this world, not chiefly to make this a good place to live in, but to live in it, be it good or bad. A man has not everything to do, but something; and because he cannot do *everything*, it is not necessary that he should do *something* wrong. It is not my business to be petitioning the Governor or the Legislature any more than it is theirs to petition me; and if they should not hear my petition, what should I do then? But in this case the state has provided no way: its very Constitution is the evil. This may seem to be harsh and stubborn and unconciliatory; but it is to treat with the utmost kindness and consideration the only spirit that can appreciate or deserves it. So is all change for the better, like birth and death, which convulse the body.

I do not hesitate to say, that those who call themselves Abolitionists should at once effectually withdraw their support, both in person and property, from the government of Massachusetts and not wait till they constitute a majority of one, before they suffer the right to prevail through them. I think that it is enough if they have God on their side, with-

out waiting for that other one. Moreover, any man more right than his neighbors constitutes a majority of one already.

I meet this American government, or its representative, the state government, directly, and face to face, once a year—no more—in the person of its tax-gatherer; this is the only mode in which a man situated as I am necessarily meets it; and it then says distinctly, Recognize me; and the simplest, most effectual, and, in the present posture of affairs, the indispensablest mode of treating with it on this head, of expressing your little satisfaction with and love for it, is to deny it then. My civil neighbor, the tax-gatherer, is the very man I have to deal with,—for it is, after all, with men and not with parchment that I quarrel,—and he has voluntarily chosen to be an agent of the government. How shall he ever know well what he is and does as an officer of the government, or as a man, until he is obliged to consider whether he shall treat me, his neighbor, for whom he has respect, as a neighbor and well-disposed man, or as a maniac and disturber of the peace, and see if he can get over this obstruction to his neighborliness without a ruder and more impetuous thought or speech corresponding with his action. I know this well, that if one thousand, if one hundred, if ten men whom I could name,—if ten *honest* men only,—ay, if *one* HONEST man, in this State of Massachusetts, *ceasing to hold slaves*, were actually to withdraw from this copartnership, and be locked up in the county jail therefor, it would be the abolition of slavery in America. For it matters not how small the beginning may seem to be: what is once well done is done forever. But we love better to talk about it: that we say is our mission. Reform keeps many scores of newspapers in its service, but not one man. If my esteemed neighbor, the State's ambassador, who will devote his days to the settlement of the question of human rights in the Council Chamber, instead of being threatened with the prisons of Carolina, were to sit down the prisoner of Massachusetts, that State which is so anxious to foist the sin of slavery upon her sister,—though at present she can discover only an act of inhospitality to be the ground

of a quarrel with her,—the Legislature would not wholly waive the subject the following winter.

Under a government which imprisons any unjustly, the true place for a just man is also a prison. The proper place to-day, the only place which Massachusetts has provided for her freer and less desponding spirits, is in her prisons, to be put out and locked out of the State by her own act, as they have already put themselves out by their principles. It is there that the fugitive slave, and the Mexican prisoner on parole, and the Indian come to plead the wrongs of his race should find them; on that separate, but more free and honorable ground, where the State places those who are not *with* her, but *against* her,—the only house in a slave State in which a free man can abide with honor. If any think that their influence would be lost there, and their voices no longer afflict the ear of the State, that they would not be as an enemy within its walls, they do not know by how much truth is stronger than error, nor how much more eloquently and effectively he can combat injustice who has experienced a little in his own person. Cast your whole vote, not a strip of paper merely, but your whole influence. A minority is powerless while it conforms to the majority; it is not even a minority then; but it is irresistible when it clogs by its whole weight. If the alternative is to keep all just men in prison, or give up war and slavery, the State will not hesitate which to choose. If a thousand men were not to pay their tax-bills this year, that would not be a violent and bloody measure, as it would be to pay them, and enable the State to commit violence and shed innocent blood. This is, in fact, the definition of a peaceable revolution, if any such is possible. If the tax-gatherer, or any other public officer, asks me, as one has done, "But what shall I do?" my answer is, "If you really wish to do anything, resign your office." When the subject has refused allegiance, and the officer has resigned his office, then the revolution is accomplished. But even suppose blood should flow. Is there not a sort of blood shed when the conscience is wounded? Through this wound a man's real manhood and immortality

flow out, and he bleeds to an everlasting death. I see this blood flowing now.

I have contemplated the imprisonment of the offender, rather than the seizure of his goods,—though both will serve the same purpose,—because they who assert the purest right, and consequently are most dangerous to a corrupt State, commonly have not spent much time in accumulating property. To such the State renders comparatively small service, and a slight tax is wont to appear exorbitant, particularly if they are obliged to earn it by special labor with their hands. If there were one who lived wholly without the use of money, the State itself would hesitate to demand it of him. But the rich man—not to make any invidious comparison—is always sold to the institution which makes him rich. Absolutely speaking, the more money, the less virtue; for money comes between a man and his objects, and obtains them for him; and it was certainly no great virtue to obtain it. It puts to rest many questions which he would otherwise be taxed to answer; while the only new question which it puts is the hard but superfluous one, how to spend it. Thus his moral ground is taken from under his feet. The opportunities of living are diminished in proportion as what are called the “means” are increased. The best thing a man can do for his culture when he is rich is to endeavor to carry out those schemes which he entertained when he was poor. Christ answered the Herodians according to their condition. “Show me the tribute-money,” said he;—and one took a penny out of his pocket;—if you use money which has the image of Cæsar on it and which he has made current and valuable, that is, *if you are men of the State*, and gladly enjoy the advantages of Cæsar’s government, then pay him back some of his own when he demands it. “Render therefore to Cæsar that which is Cæsar’s, and to God those things which are God’s,”—leaving them no wiser than before as to which was which; for they did not wish to know.

When I converse with the freest of my neighbors, I perceive that, whatever they may say about the magnitude and

seriousness of the question, and their regard for the public tranquillity, the long and the short of the matter is, that they cannot spare the protection of the existing government, and they dread the consequences to their property and families of disobedience to it. For my own part, I should not like to think that I ever rely on the protection of the State. But, if I deny the authority of the State when it presents its tax-bill, it will soon take and waste all my property, and so harass me and my children without end. This is hard. This makes it impossible for a man to live honestly, and at the same time comfortably, in outward respects. It will not be worth the while to accumulate property; that would be sure to go again. You must hire or squat somewhere, and raise but a small crop, and eat that soon. You must live within yourself, and depend upon yourself always tucked up and ready for a start, and not have many affairs. A man may grow rich in Turkey even, if he will be in all respects a good subject of the Turkish government. Confucius said: "If a state is governed by the principles of reason, poverty and misery are subjects of shame; if a state is not governed by the principles of reason, riches and honors are the subjects of shame." No: until I want the protection of Massachusetts to be extended to me in some distant Southern port, where my liberty is endangered, or until I am bent solely on building up an estate at home by peaceful enterprise, I can afford to refuse allegiance to Massachusetts, and her right to my property and life. It costs me less in every sense to incur the penalty of disobedience to the State than it would to obey. I should feel as if I were worth less in that case.

Some years ago, the State met me in behalf of the Church, and commanded me to pay a certain sum toward the support of a clergyman whose preaching my father attended, but never I myself. "Pay," it said, "or be locked up in the jail." I declined to pay. But, unfortunately, another man saw fit to pay it. I did not see why the schoolmaster should be taxed to support the priest, and not the priest the schoolmaster; for I was not the State's schoolmaster, but I supported myself by voluntary subscription. I did not see why the lyceum should

not present its tax-bill, and have the State to back its demand, as well as the Church. However, at the request of the selectmen, I condescended to make some such statement as this in writing:—"Know all men by these presents, that I, Henry Thoreau, do not wish to be regarded as a member of any incorporated society which I have not joined." This I gave to the town clerk; and he has it. The State, having thus learned that I did not wish to be regarded as a member of that church, has never made a like demand on me since; though it said that it must adhere to its original presumption that time. If I had known how to name them, I should then have signed off in detail from all the societies which I never signed on to; but I did not know where to find a complete list.

I have paid no poll-tax for six years. I was put into a jail once on this account, for one night; and, as I stood considering the walls of solid stone, two or three feet thick, the door of wood and iron, a foot thick, and the iron grating which strained the light, I could not help being struck with the foolishness of that institution which treated me as if I were mere flesh and blood and bones, to be locked up. I wondered that it should have concluded at length that this was the best use it could put me to, and had never thought to avail itself of my services in some way. I saw that, if there was a wall of stone between me and my townsmen, there was a still more difficult one to climb or break through before they could get to be as free as I was. I did not for a moment feel confined, and the walls seemed a great waste of stone and mortar. I felt as if I alone of all my townsmen had paid my tax. They plainly did not know how to treat me, but behaved like persons who are underbred. In every threat and in every compliment there was a blunder; for they thought that my chief desire was to stand the other side of that stone wall. I could not but smile to see how industriously they locked the door on my meditations, which followed them out again without let or hindrance, and *they* were really all that was dangerous. As they could not reach me, they had resolved to punish my body; just as boys, if they cannot come at some person against whom they have a spite, will abuse his

dog. I saw that the State was half-witted, that it was timid as a lone woman with her silver spoons, and that it did not know its friends from its foes, and I lost all my remaining respect for it, and pitied it.

Thus the State never intentionally confronts a man's sense, intellectual or moral, but only his body, his senses. It is not armed with superior wit or honesty, but with superior physical strength. I was not born to be forced. I will breathe after my own fashion. Let us see who is the strongest. What force has a multitude? They only can force me who obey a higher law than I. They force me to become like themselves. I do not hear of *men* being *forced* to live this way or that by masses of men. What sort of life were that to live? When I meet a government which says to me, "Your money or your life," why should I be in haste to give it my money? It may be in a great strait, and not know what to do: I cannot help that. It must help itself; do as I do. It is not worth the while to snivel about it. I am not responsible for the successful working of the machinery of society. I am not the son of the engineer. I perceive that, when an acorn and a chestnut fall side by side, the one does not remain inert to make way for the other, but both obey their own laws, and spring and grow and flourish as best they can, till one, perchance, overshadows and destroys the other. If a plant cannot live according to its nature, it dies; and so a man.

The night in prison was novel and interesting enough. The prisoners in their shirt-sleeves were enjoying a chat and the evening air in the doorway, when I entered. But the jailer said, "Come, boys, it is time to lock up;" and so they dispersed, and I heard the sound of their steps returning into the hollow apartments. My room-mate was introduced to me by the jailer as "a first-rate fellow and a clever man." When the door was locked, he showed me where to hang my hat, and how he managed matters there. The rooms were white-washed once a month; and this one, at least, was the whitest, most simply furnished, and probably the neatest apartment in the town. He naturally wanted to know where I came from, and what brought me there; and, when I had told him,

I asked him in my turn how he came there, presuming him to be an honest man, of course; and, as the world goes, I believe he was. "Why," said he, "they accuse me of burning a barn; but I never did it." As near as I could discover, he had probably gone to bed in a barn when drunk, and smoked his pipe there; and so a barn was burnt. He had the reputation of being a clever man, had been there some three months waiting for his trial to come on, and would have to wait as much longer; but he was quite domesticated and contented, since he got his board for nothing, and thought that he was well treated.

He occupied one window, and I the other; and I saw that if one stayed there long, his principal business would be to look out the window. I had soon read all the tracts that were left there, and examined where former prisoners had broken out, and where a grate had been sawed off, and heard the history of the various occupants of that room; for I found that even here there was a history and a gossip which never circulated beyond the walls of the jail. Probably this is the only house in the town where verses are composed, which are afterward printed in a circular form, but not published. I was shown quite a long list of verses which were composed by some young men who had been detected in an attempt to escape, who avenged themselves by singing them.

I pumped my fellow-prisoner as dry as I could, for fear I should never see him again; but at length he showed me which was my bed, and left me to blow out the lamp.

It was like traveling into a far country, such as I had never expected to behold, to lie there for one night. It seemed to me that I never had heard the town-clock strike before, nor the evening sounds of the village; for we slept with the windows open, which were inside the grating. It was to see my native village in the light of the Middle Ages, and our Concord was turned into a Rhine stream, and visions of knights and castles passed before me. They were the voices of old burghers that I heard in the streets. I was an involuntary spectator and auditor of whatever was done and said in the kitchen of the adjacent village-inn,—a wholly new and

rare experience to me. It was a closer view of my native town. I was fairly inside of it. I never had seen its institutions before. This is one of its peculiar institutions; for it is a shire town. I began to comprehend what its inhabitants were about.

In the morning, our breakfasts were put through the hole in the door, in small oblong-square tin pans, made to fit, and holding a pint of chocolate, with brown bread, and an iron spoon. When they called for the vessels again, I was green enough to return what bread I had left; but my comrade seized it, and said that I should lay that up for lunch or dinner. Soon after he was let out to work at haying in a neighboring field, whither he went every day, and would not be back till noon; so he bade me good-day, saying that he doubted if he should see me again.

When I came out of prison,—for some one interfered, and paid that tax,—I did not perceive that great changes had taken place on the common, such as he observed who went in a youth and emerged a tottering and gray-headed man; and yet a change had to my eyes come over the scene,—the town, and State, and country,—greater than any that mere time could effect. I saw yet more distinctly the State in which I lived. I saw to what extent the people among whom I lived could be trusted as good neighbors and friends; that their friendship was for summer weather only; that they did not greatly propose to do right; that they were a distinct race from me by their prejudices and superstitions, as the Chinamen and Malays are; that in their sacrifices to humanity they ran no risks, not even to their property; that after all they were not so noble but they treated the thief as he had treated them, and hoped, by a certain outward observance and a few prayers, and by walking in a particular straight though useless path from time to time, to save their souls. This may be to judge my neighbors harshly; for I believe that many of them are not aware that they have such an institution as the jail in their village.

It was formerly the custom in our village, when a poor debtor came out of jail, for his acquaintances to salute him,

looking through their fingers, which were crossed to represent the grating of a jail window, "How do ye do?" My neighbors did not thus salute me, but first looked at me, and then at one another, as if I had returned from a long journey. I was put into jail as I was going to the shoemaker's to get a shoe which was mended. When I was let out the next morning, I proceeded to finish my errand, and, having put on my mended shoe, joined a huckleberry party, who were impatient to put themselves under my conduct; and in half an hour,—for the horse was soon tackled,—was in the midst of a huckleberry field, on one of our highest hills, two miles off, and then the State was nowhere to be seen.

This is the whole history of "My Prisons."

I have never declined paying the highway tax, because I am as desirous of being a good neighbor as I am of being a bad subject; and as for supporting schools, I am doing my part to educate my fellow-countrymen now. It is for no particular item in the tax-bill that I refuse to pay it. I simply wish to refuse allegiance to the State, to withdraw and stand aloof from it effectually. I do not care to trace the course of my dollar, if I could, till it buys a man or a musket to shoot with,—the dollar is innocent,—but I am concerned to trace the effects of my allegiance. In fact, I quietly declare war with the State, after my fashion, though I will still make what use and get what advantage of her I can, as is usual in such cases.

If others pay the tax which is demanded of me, from a sympathy with the State, they do but what they have already done in their own case, or rather they abet injustice to a greater extent than the State requires. If they pay the tax from a mistaken interest in the individual taxed, to save his property, or prevent his going to jail, it is because they have not considered wisely how far they let their private feelings interfere with the public good.

This, then, is my position at present. But one cannot be too much on his guard in such a case, lest his action be biased by obstinacy or an undue regard for the opinions of men.

Let him see that he does only what belongs to himself and to the hour.

I think sometimes, Why, this people mean well, they are only ignorant; they would do better if they knew how: why give your neighbors this pain to treat you as they are not inclined to? But I think again, This is no reason why I should do as they do, or permit others to suffer much greater pain of a different kind. Again, I sometimes say to myself, When many millions of men, without heat, without ill will, without personal feeling of any kind, demand of you a few shillings only, without the possibility, such is their constitution, of retracting or altering their present demand, and without the possibility, on your side, of appeal to any other millions, why expose yourself to this overwhelming brute force? You do not resist cold and hunger, the winds and the waves, thus obstinately; you quietly submit to a thousand similar necessities. You do not put your head into the fire. But just in proportion as I regard this as not wholly a brute force, but partly a human force, and consider that I have relations to those millions as to so many millions of men, and not of mere brute or inanimate things, I see that appeal is possible, first and instantaneously, from them to the Maker of them, and, secondly, from them to themselves. But if I put my head deliberately into the fire, there is no appeal to fire or to the Maker of fire, and I have only myself to blame. If I could convince myself that I have any right to be satisfied with men as they are, and to treat them accordingly, and not according, in some respects, to my requisitions and expectations of what they and I ought to be, then, like a good Mussulman and fatalist, I should endeavor to be satisfied with things as they are, and say it is the will of God. And, above all, there is this difference between resisting this and a purely brute or natural force, that I can resist this with some effect; but I cannot expect, like Orpheus, to change the nature of the rocks and trees and beasts.

I do not wish to quarrel with any man or nation. I do not wish to split hairs, to make fine distinctions, or set myself up as better than my neighbors. I seek rather, I may say, even

an excuse for conforming to the laws of the land. I am but too ready to conform to them. Indeed, I have reason to suspect myself on this head; and each year, as the tax-gatherer comes round, I find myself disposed to review the acts and position of the general and State governments, and the spirit of the people, to discover a pretext for conformity.

“We must affect our country as our parents,
And if at any time we alienate
Our love or industry from doing it honor,
We must respect effects and teach the soul
Matter of conscience and religion,
And not desire of rule or benefit.”

I believe that the State will soon be able to take all my work of this sort out of my hands, and then I shall be no better a patriot than my fellow-countrymen. Seen from a lower point of view, the Constitution, with all its faults, is very good; the law and the courts are very respectable; even this State and this American government are, in many respects, very admirable, and rare things, to be thankful for, such as a great many have described them; but seen from a point of view a little higher, they are what I have described them; seen from a higher still, and the highest, who shall say what they are, or that they are worth looking at or thinking of at all?

However, the government does not concern me much, and I shall bestow the fewest possible thoughts on it. It is not many moments that I live under a government, even in this world. If a man is thought-free, fancy-free, imagination-free, that which *is not* never for a long time appearing *to be* to him, unwise rulers or reformers cannot fatally interrupt him.

I know that most men think differently from myself; but those whose lives are by profession devoted to the study of these or kindred subjects content me as little as any. Statesmen and legislators, standing so completely within the institution, never distinctly and nakedly behold it. They speak of moving society, but have no resting-place without it. They may be men of a certain experience and discrimination, and

have no doubt invented ingenious and even useful systems, for which we sincerely thank them; but all their wit and usefulness lie within certain not very wide limits. They are wont to forget that the world is not governed by policy and expediency. Webster never goes behind government, and so cannot speak with authority about it. His words are wisdom to those legislators who contemplate no essential reform in the existing government; but for thinkers, and those who legislate for all time, he never once glances at the subject. I know of those whose serene and wise speculations on this theme would soon reveal the limits of his mind's range and hospitality. Yet, compared with the cheap professions of most reformers, and the still cheaper wisdom and eloquence of politicians in general, his are almost the only sensible and valuable words, and we thank Heaven for him. Comparatively, he is always strong, original, and, above all, practical. Still, his quality is not wisdom, but prudence. The lawyer's truth is not Truth, but consistency or a consistent expediency. Truth is always in harmony with herself, and is not concerned chiefly to reveal the justice that may consist with wrong-doing. He well deserves to be called, as he has been called, the Defender of the Constitution. There are really no blows to be given by him but defensive ones. He is not a leader, but a follower. His leaders are the men of '87. "I have never made an effort," he says, "and never propose to make an effort; I have never countenanced an effort, and never mean to countenance an effort, to disturb the arrangement as originally made, by which the various States came into the Union." Still thinking of the sanction which the Constitution gives to slavery, he says, "Because it was a part of the original compact,—let it stand." Notwithstanding his special acuteness and ability, he is unable to take a fact out of its merely political relations, and behold it as it lies absolutely to be disposed of by the intellect,—what, for instance, it behooves a man to do here in America to-day with regard to slavery,—but ventures, or is driven, to make some such desperate answer as the following, while professing to speak absolutely, and as a private man,—from which what new and singular

code of social duties might be inferred? "The manner," says he, "in which the governments of those States where slavery exists are to regulate it is for their own consideration, under their responsibility to their constituents, to the general laws of propriety, humanity, and justice, and to God. Associations formed elsewhere, springing from a feeling of humanity, or other cause, have nothing whatever to do with it. They have never received any encouragement from me, and they never will."¹

They who know of no purer sources of truth, who have traced up its stream no higher, stand, and wisely stand, by the Bible and the Constitution, and drink at it there with reverence and humility; but they who behold where it comes trickling into this lake or that pool, gird up their loins once more, and continue their pilgrimage toward its fountain-head.

No man with a genius for legislation has appeared in America. They are rare in the history of the world. There are orators, politicians, and eloquent men, by the thousand; but the speaker has not yet opened his mouth to speak who is capable of settling the much-vexed questions of the day. We love eloquence for its own sake, and not for any truth which it may utter, or any heroism it may inspire. Our legislators have not yet learned the comparative value of free-trade and of freedom, of union, and of rectitude, to a nation. They have no genius or talent for comparatively humble questions of taxation and finance, commerce and manufactures and agriculture. If we were left solely to the wordy wit of legislators in Congress for our guidance, uncorrected by the seasonable experience and the effectual complaints of the people, America would not long retain her rank among the nations. For eighteen hundred years, though perchance I have no right to say it, the New Testament has been written; yet where is the legislator who has wisdom and practical talent enough to avail himself of the light which it sheds on the science of legislation?

¹ These extracts have been inserted since the lecture was read.

The authority of government, even such as I am willing to submit to,—for I will cheerfully obey those who know and can do better than I, and in many things even those who neither know nor can do so well,—is still an impure one: to be strictly just, it must have the sanction and consent of the governed. It can have no pure right over my person and property but what I concede to it. The progress from an absolute to a limited monarchy, from a limited monarchy to a democracy, is a progress toward a true respect for the individual. Even the Chinese philosopher was wise enough to regard the individual as the basis of the empire. Is a democracy, such as we know it, the last improvement possible in government? Is it not possible to take a step further towards recognizing and organizing the rights of man? There will never be a really free and enlightened State until the State comes to recognize the individual as a higher and independent power, from which all its own power and authority are derived, and treats him accordingly. I please myself with imagining a State at last which can afford to be just to all men, and to treat the individual with respect as a neighbor; which even would not think it inconsistent with its own repose if a few were to live aloof from it, not meddling with it, nor embraced by it, who fulfilled all the duties of neighbors and fellow-men. A State which bore this kind of fruit, and suffered it to drop off as fast as it ripened, would prepare the way for a still more perfect and glorious State, which also I have imagined, but not yet anywhere seen.

Adam Smith

FROM THE
WEALTH OF NATIONS

Adam Smith
[1723-1790]

The prophet of what has come to be known as free enterprise was an eighteenth-century professor of moral philosophy at Glasgow University. His great work, published in the year that marked the signing of the American Declaration of Independence, was, in its own time, an almost equally revolutionary document. *The Wealth of Nations* signalized the death of feudal Europe and the beginnings of the industrial age. It provided a rationale for the revolution in the economic order. Adam Smith assumed that self-interest is the basic motive for economic power; that the total of economic effort is for the social good; and that ultimately the whole complex of all the economic processes works out for the best. Hence the term *laissez-faire* has long been associated with Adam Smith's monumental contribution to the study of the freedom of trade in our society. The sections following pertain to the origin and rise of money, the real, nominal, component, natural and market price of commodities and the wages of labor.

FROM THE WEALTH OF NATIONS

ADAM SMITH

Of the Origin and Use of Money

When the division of labour has been once thoroughly established, it is but a very small part of a man's wants which the produce of his own labour can supply. He supplies the far greater part of them by exchanging that surplus part of the produce of his own labour, which is over and above his own consumption, for such parts of the produce of other men's labour as he has occasion for. Every man thus lives by exchanging, or becomes in some measure a merchant, and the society itself grows to be what is properly a commercial society.

But when the division of labour first began to take place, this power of exchanging must frequently have been very much clogged and embarrassed in its operations. One man, we shall suppose, has more of a certain commodity than he himself has occasion for, while another has less. The former consequently would be glad to dispose of, and the latter to purchase, a part of this superfluity. But if this latter should chance to have nothing that the former stands in need of, no exchange can be made between them. The butcher has more meat in his shop than he himself can consume, and the brewer and the baker would each of them be willing to purchase a part of it. But they have nothing to offer in exchange, except

the different productions of their respective trades, and the butcher is already provided with all the bread and beer which he has immediate occasion for. No exchange can, in this case, be made between them. He cannot be their merchant, nor they his customers; and they are all of them thus mutually less serviceable to one another. In order to avoid the inconveniency of such situations, every prudent man in every period of society, after the first establishment of the division of labour, must naturally have endeavoured to manage his affairs in such a manner, as to have at all times by him, besides the peculiar produce of his own industry, a certain quantity of some one commodity or other, such as he imagined few people would be likely to refuse in exchange for the produce of their industry.¹

Many different commodities, it is probable, were successively both thought of and employed for this purpose. In the rude ages of society, cattle are said to have been the common instrument of commerce; and, though they must have been a most inconvenient one, yet in old times we find things were frequently valued according to the number of cattle which had been given in exchange for them. The armour of Diomede, says Homer, cost only nine oxen; but that of Glaucus cost an hundred oxen.² Salt is said to be the common instrument of commerce and exchanges in Abyssinia;³ a species of shells in some parts of the coast of India; dried cod at Newfoundland; tobacco in Virginia;⁴ sugar in some of our West India colonies; hides or dressed leather in some other coun-

¹ The paragraph has a close resemblance to Harris, *Money and Coins*, pt. i., §§ 19, 20.

Certain law officers' fees in Washington were still computed in tobacco in 1888.—J. J. Lalor, *Cyclopædia of Political Science*, 1888, s.v. Money, p. 879.

tries; and there is at this day a village in Scotland where it is not uncommon, I am told, for a workman to carry nails instead of money to the baker's shop or the ale-house.⁵

In all countries, however, men seem at last to have been determined by irresistible reasons to give the preference, for this employment, to metals above every other commodity.⁶ Metals can not only be kept with as little loss as any other commodity, scarce any thing being less perishable than they are, but they can likewise, without any loss, be divided into any number of parts, as by fusion those parts can easily be reunited again; a quality which no other equally durable commodities possess, and which more than any other quality renders them fit to be the instruments of commerce and circulation. The man who wanted to buy salt, for example, and had nothing but cattle to give in exchange for it, must have been obliged to buy salt to the value of a whole ox, or a whole sheep, at a time. He could seldom buy less than this, because what he was to give for it could seldom be divided without loss; and if he had a mind to buy more, he must, for the same reasons, have been obliged to buy double or triple the quantity, the value, to wit, of two or three oxen, or of two or three sheep. If, on the contrary, instead of sheep or oxen, he had metals to give in exchange for it, he could easily proportion the quantity of the metal to the precise quantity of the commodity which he had immediate occasion for.

Different metals have been made use of by different nations

⁵ Playfair, ed. of *Wealth of Nations*, 1805, vol. i., p. 36, says the explanation of this is that factors furnish the nailers with materials, and during the time they are working give them a credit for bread, cheese and chandlery goods, which they pay for in nails when the iron is worked up. The fact that nails are metal is forgotten at the beginning of the next paragraph in the text above.

⁶ For earlier theories as to these reasons see Grotius, *De jure belli et pacis*, lib. ii., cap. xii., § 17; Pufendorf, *De jure naturæ et gentium*, lib. v., cap. i., § 13; Locke, *Some Considerations*, 2nd ed., 1696, p. 31; Law, *Money and Trade*, 1705, ch. i.; Hutcheson, *System of Moral Philosophy*, 1755, vol. ii., pp. 55, 56; Montesquieu, *Esprit des lois*, liv. xxii., ch. ii.; Cantillon, *Essai sur la Nature du Commerce en général*, 1755, pp. 153, 355-357; Harris, *Money and Coins*, pt. i., §§ 22-27, and cp. *Lectures*, pp. 182-185.

for this purpose. Iron was the common instrument of commerce among the antient Spartans; copper among the antient Romans; and gold and silver among all rich and commercial nations.

Those metals seem originally to have been made use of for this purpose in rude bars, without any stamp or coinage. Thus we are told by Pliny,⁷ upon the authority of Timæus, an antient historian, that, till the time of Servius Tullius, the Romans had no coined money, but made use of unstamped bars of copper, to purchase whatever they had occasion for. These rude bars, therefore, performed at this time the function of money.

The use of metals in this rude state was attended with two very considerable inconveniences; first with the trouble of weighing;⁸ and, secondly, with that⁹ of assaying them. In the precious metals, where a small difference in the quantity makes a great difference in the value, even the business of weighing, with proper exactness, requires at least very accurate weights and scales. The weighing of gold in particular is an operation of some nicety. In the coarser metals, indeed, where a small error would be of little consequence, less accuracy would, no doubt, be necessary. Yet we should find it excessively troublesome, if every time a poor man had occasion either to buy or sell a farthing's worth of goods, he was obliged to weigh the farthing. The operation of assaying is still more difficult, still more tedious, and, unless a part of the metal is fairly melted in the crucible, with proper dissolvents, any conclusion that can be drawn from it, is extremely uncertain. Before the institution of coined money, however, unless they went through this tedious and difficult operation,

⁷ Plin. Hist. Nat. lib. 33. cap. 3. "Servius rex primus signavit aes. Antea rudi usos Romæ Timæus tradit." Ed. 1 reads "authority of one Remeus, an antient author," Remeus being the reading in the edition of Pliny in Smith's library, cp. Bonar's *Catalogue of the Library of Adam Smith*, 1894, p. 87. Ed. 1 does not contain the note.

⁸ Ed. 1 reads "weighing them."

⁹ Ed. 1 reads "with the trouble."

people must always have been liable to the grossest frauds and impositions, and instead of a pound weight of pure silver, or pure copper, might receive in exchange for their goods, an adulterated composition of the coarsest and cheapest materials, which had, however, in their outward appearance, been made to resemble those metals. To prevent such abuses, to facilitate exchanges, and thereby to encourage all sorts of industry and commerce, it had been found necessary, in all countries that have made any considerable advances towards improvement, to affix a public stamp upon certain quantities of such particular metals, as were in those countries commonly made use of to purchase goods. Hence the origin of coined money, and of those public offices called mints;¹⁰ institutions exactly of the same nature with those of the aulnagers and stampmasters of woollen and linen cloth.¹¹ All of them are equally meant to ascertain, by means of a public stamp, the quantity and uniform goodness of those different commodities when brought to market.

The first public stamps of this kind that were affixed to the current metals, seem in many cases to have been intended to ascertain, what it was both most difficult and most important to ascertain, the goodness or fineness of the metal, and to have resembled the sterling mark which is at present affixed to plate and bars of silver, or the Spanish mark which is sometimes affixed to ingots of gold, and which being struck only upon one side of the piece, and not covering the whole surface, ascertains the fineness, but not the weight of the metal. Abra-

¹¹ The aulnager measured woollen cloth in England under 25 Ed. III., st. 4, c. 1. See John Smith, *Chronicon Rusticum-Commerciale or Memoirs of Wool*, 1747, vol. i., p. 37. The stampmasters of linen cloth in the linen districts of Scotland were appointed under 10 Ann., c. 21, to prevent "divers abuses and deceits" which "have of late years been used in the manufacturies of linen cloth . . . with respect to the lengths, breadths and unequal sorting of yarn, which leads to the great debasing and undervaluing of the said linen cloth both at home and in foreign parts."—*Statutes of the Realm*, vol. ix., p. 682.

ham weighs to Ephron the four hundred shekels of silver which he had agreed to pay for the field of Machpelah.¹² They are said however to be the current money of the merchant, and yet are received by weight and not by tale, in the same manner as ingots of gold and bars of silver are at present. The revenues of the antient Saxon kings of England are said to have been paid, not in money but in kind, that is, in victuals and provisions of all sorts. William the Conqueror introduced the custom of paying them in money.¹³ This money, however, was, for a long time, received at the exchequer, by weight and not by tale.¹⁴

The inconveniency and difficulty of weighing those metals with exactness gave occasion to the institution of coins, of which the stamp, covering entirely both sides of the piece and sometimes the edges too, was supposed to ascertain not only the fineness, but the weight of the metal. Such coins, therefore, were received by tale as at present, without the trouble of weighing.

The denominations of those coins seem originally to have expressed the weight or quantity of metal contained in them. In the time of Servius Tullius, who first coined money at Rome, the Roman As or Pondo contained a Roman pound of good copper. It was divided in the same manner as our Troyes pound, into twelve ounces, each of which contained a real ounce of good copper. The English pound sterling in the time of Edward I., contained a pound, Tower weight, of silver of a known fineness. The Tower pound seems to have been something more than the Roman pound, and something less than the Troyes pound. This last was not introduced

Hume, whom Adam Smith often follows, makes no such absurd statement, *History*, ed. of 1773, vol. i., pp. 225, 226.

¹⁴ Lowndes, *Essay*, p. 4.

into the mint of England till the 18th of Henry VIII. The French livre contained in the time of Charlemagne a pound, Troyes weight, of silver of a known fineness. The fair of Troyes in Champaign was at that time frequented by all the nations of Europe, and the weights and measures of so famous a market were generally known and esteemed. The Scots money pound contained, from the time of Alexander the First to that of Robert Bruce, a pound of silver of the same weight and fineness with the English pound sterling. English, French, and Scots pennies too, contained all of them originally a real pennyweight of silver, the twentieth part of an ounce, and the two-hundred-and-fortieth part of a pound. The shilling too seems originally to have been the denomination of a weight. *When wheat is at twelve shillings the quarter,* says an antient statute of Henry III. *then wastel bread of a farthing shall weigh eleven shillings and four pence.*¹⁵ The proportion, however, between the shilling and either the penny on the one hand, or the pound on the other, seems not to have been so constant and uniform as that between the penny and the pound. During the first race of the kings of France, the French sou or shilling appears upon different occasions to have contained five, twelve, twenty, and forty pennies.¹⁶ Among the antient Saxons a shilling appears at one time to have contained only five pennies,¹⁷ and it is not im-

¹⁵ The Assize of Bread and Ale, 51 Hen. III., contains an elaborate scale beginning, "When a quarter of wheat is sold for xii d. then wastel bread of a farthing shall weigh vi l. and xvi s." and goes on to the figures quoted in the text above. The statute is quoted at second-hand from Martin Folkes' *Table of English Silver Coins* with the same object by Harris, *Essay upon Money and Coins*, pt. i., § 29, but Harris does not go far enough in the scale to bring in the penny as a weight.

¹⁶ Ed. i reads "twenty, forty and forty-eight pennies." Garnier, *Recherches sur la nature et les causes de la richesse des nations*, par Adam Smith, 1802, tom. v., p. 55, in a note on this passage says that the sou was always twelve deniers.

¹⁷ Hume, *History of England*, ed. of 1773, i., p. 226. Fleetwood, *Chronicon Preciosum*, 1707, p. 30. These authorities say there were 48 shillings in the pound, so that 240 pence would still make £1.

probable that it may have been as variable among them as among their neighbours, the antient Franks. From the time of Charlemagne among the French,¹⁸ and from that of William the Conqueror among the English,¹⁹ the proportion between the pound, the shilling, and the penny, seems to have been uniformly the same as at present, though the value of each has been very different. For in every country of the world, I believe, the avarice and injustice of princes and sovereign states, abusing the confidence of their subjects, have by degrees diminished the real quantity of metal, which had been originally contained in their coins. The Roman As, in the latter ages of the Republic, was reduced to the twenty-fourth part of its original value, and, instead of weighing a pound, came to weigh only half an ounce.²⁰ The English pound and penny contain at present about a third only; the Scots pound and penny about a thirty-sixth; and the French pound and penny about a sixty-sixth part of their original value.²¹ By means of those operations the princes and sovereign states which performed them were enabled, in appearance, to pay their debts and to fulfil their engagements with a smaller quantity of silver than would otherwise have been requisite. It was indeed in appearance only; for their creditors were really defrauded of a part of what was due to them. All other debtors in the state were allowed the same privilege, and might pay with the same nominal sum of the new and debased coin whatever they had borrowed in the old. Such operations, therefore, have always proved favourable to the debtor, and ruinous to the creditor, and have sometimes produced a greater and more universal revolution in the fortunes of private persons, than could have been occasioned by a very great public calamity.²²

¹⁸ Harris, *Money and Coins*, pt. i., § 29.

¹⁹ "It is thought that soon after the Conquest a pound sterling was divided into twenty shillings."—Hume, *History of England*, ed., of 1773, vol. i., p. 227.

²⁰ Pliny, *Hist. Nat.*, lib. xxxiii., cap. iii.

²¹ Harris, *Money and Coins*, p. i., § 30, note, makes the French livre about one seventieth part of its original value.

²² The subject of debased and depreciated coinage occurs again below.

It is in this manner that money has become in all civilized nations the universal instrument of commerce, by the intervention of which goods of all kinds are bought and sold, or exchanged for one another.^{22a}

What are the rules which men naturally observe in exchanging them either for money or for one another, I shall now proceed to examine. These rules determine what may be called the relative or exchangeable value of goods.

The word VALUE, it is to be observed, has two different meanings, and sometimes expresses the utility of some particular object, and sometimes the power of purchasing other goods which the possession of that object conveys. The one may be called "value in use;" the other, "value in exchange." The things which have the greatest value in use have frequently little or no value in exchange; and on the contrary, those which have the greatest value in exchange have frequently little or no value in use. Nothing is more useful than water: but it will purchase scarce any thing; scarce any thing can be had in exchange for it. A diamond, on the contrary, has scarce any value in use; but a very great quantity of other goods may frequently be had in exchange for it.²³

In order to investigate the principles which regulate the exchangeable value of commodities, I shall endeavour to shew,

First, what is the real measure of this exchangeable value; or, wherein consists the real price of all commodities.

^{22a} In *Lectures*, pp. 182-190, where much of this chapter is to be found, money is considered "first as the measure of value and then as the medium of permutation or exchange." Money is said to have had its origin in the fact that men naturally fell upon one commodity with which to compare the value of all other commodities. When this commodity was once selected it became the medium of exchange. In this chapter money comes into use from the first as a medium of exchange, and its use as a measure of value is not mentioned. The next chapter explains that it is vulgarly used as a measure of value because it is used as an instrument of commerce or medium of exchange.

²³ *Lectures*, p. 157. Law, *Money and Trade*, 1705, ch. i. (followed by Harris, *Money and Coins*, pt. i., § 3), contrasts the value of water with that of diamonds. The cheapness of water is referred to by Plato, *Euthydem.* 304 B., quoted by Pufendorf, *De jure naturæ et gentium*, lib. v., cap. i., § 6; cp. Barbeyrac's note on § 4.

Secondly, what are the different parts of which this real price is composed or made up.

And, lastly, what are the different circumstances which sometimes raise some or all of these different parts of price above, and sometimes sink them below their natural or ordinary rate; or, what are the causes which sometimes hinder the market price, that is, the actual price of commodities, from coinciding exactly with what may be called their natural price.

I shall endeavour to explain, as fully and distinctly as I can, those three subjects in the three following chapters, for which I must very earnestly entreat both the patience and attention of the reader: his patience in order to examine a detail which may perhaps in some places appear unnecessarily tedious; and his attention in order to understand what may, perhaps, after the fullest explication which I am capable of giving of it, appear still in some degree obscure. I am always willing to run some hazard of being tedious in order to be sure that I am perspicuous; and after taking the utmost pains that I can to be perspicuous, some obscurity may still appear to remain upon a subject ²⁴ in its own nature extremely abstracted.

*Of the Real and Nominal Price of Commodities,
or of Their Price in Labour, and
Their Price in Money*

Every man is rich or poor according to the degree in which he can afford to enjoy the necessities, conveniencies, and amusements of human life.²⁵ But after the division of labour

²⁴ Ed. 1 reads "subject which is."

²⁵ "La richesse en elle-même n'est autre chose que la nourriture, les commodités et les agréments de la vie."—Cantillon, *Essai*, pp. 1, 2.

has once thoroughly taken place, it is but a very small part of these with which a man's own labour can supply him. The far greater part of them he must derive from the labour of other people, and he must be rich or poor according to the quantity of that labour which he can command, or which he can afford to purchase. The value of any commodity, therefore, to the person who possesses it, and who means not to use or consume it himself, but to exchange it for other commodities, is equal to the quantity of labour which it enables him to purchase or command. Labour, therefore, is the real measure of the exchangeable value of all commodities.

The real price of every thing, what every thing really costs to the man who wants to acquire it, is the toil and trouble of acquiring it. What every thing is really worth to the man who has acquired it, and who wants to dispose of it or exchange it for something else, is the toil and trouble which it can save to himself, and which it can impose upon other people. What is bought with money or with goods is purchased by labour,²⁶ as much as what we acquire by the toil of our own body. That money or those goods indeed save us this toil. They contain the value of a certain quantity of labour which we exchange for what is supposed at the time to contain the value of an equal quantity. Labour was the first price, the original purchase-money that was paid for all things. It was not by gold or by silver, but by labour, that all the wealth of the world was originally purchased; and its value, to those who possess it, and who want to exchange it for some new productions, is precisely equal to the quantity of labour which it can enable them to purchase or command.

Wealth, as Mr. Hobbes says, is power.²⁷ But the person who either acquires, or succeeds to a great fortune, does not necessarily acquire or succeed to any political power, either civil

²⁶ "Everything in the world is purchased by labour."—Hume, "Of Commerce," in *Political Discourses*, 1752, p. 12.

²⁷ "Also riches joined with liberality is Power, because it procurerh friends and servants: without liberality not so, because in this case they defend not but expose men to envy as a prey."—*Leviathan*, I., x.

or military. His fortune may, perhaps, afford him the means of acquiring both, but the mere possession of that fortune does not necessarily convey to him either. The power which that possession immediately and directly conveys to him, is the power of purchasing; a certain command over all the labour, or over all the produce of labour which is then in the market. His fortune is greater or less, precisely in proportion to the extent of this power; or to the quantity either of other men's labour, or, what is the same thing, of the produce of other men's labour, which it enables him to purchase or command. The exchangeable value of every thing must always be precisely equal to the extent of this power which it conveys to its owner.²⁸

But though labour be the real measure of the exchangeable value of all commodities, it is not that by which their value is commonly estimated. It is often difficult to ascertain the proportion between two different quantities of labour. The time spent in two different sorts of work will not always alone determine this proportion. The different degrees of hardship endured, and of ingenuity exercised, must likewise be taken into account. There may be more labour in an hour's hard work than in two hours easy business; or in an hour's application to a trade which it cost ten years labour to learn, than in a month's industry at an ordinary and obvious employment. But it is not easy to find any accurate measure either of hardship or ingenuity. In exchanging indeed the different productions of different sorts of labour for one another, some allowance is commonly made for both. It is adjusted, however, not by any accurate measure, but by the higgling and bargaining of the market, according to that sort of rough equality which, though not exact, is sufficient for carrying on the business of common life.

Every commodity besides, is more frequently exchanged for, and thereby compared with, other commodities than with labour. It is more natural therefore, to estimate its exchange-

²⁸ This paragraph appears first in *Additions and Corrections* and ed. 3.

able value by the quantity of some other commodity than by that of the labour which it can purchase. The greater part of people too understand better what is meant by a quantity of a particular commodity, than by a quantity of labour. The one is a plain palpable object; the other an abstract notion, which, though it can be made sufficiently intelligible, is not altogether so natural and obvious.

But when barter ceases, and money has become the common instrument of commerce, every particular commodity is more frequently exchanged for money than for any other commodity. The butcher seldom carries his beef or his mutton to the baker, or the brewer, in order to exchange them for bread or for beer; but he carries them to the market, where he exchanges them for money, and afterwards exchanges that money for bread and for beer. The quantity of money which he gets for them regulates too the quantity of bread and beer which he can afterwards purchase. It is more natural and obvious to him, therefore, to estimate their value by the quantity of money, the commodity for which he immediately exchanges them, than by that of bread and beer, the commodities for which he can exchange them only by the intervention of another commodity; and rather to say that his butcher's meat is worth threepence or fourpence a pound, than that it is worth three or four pounds of bread, or three or four quarts of small beer. Hence it comes to pass, that the exchangeable value of every commodity is more frequently estimated by the quantity of money, than by the quantity either of labour or of any other commodity which can be had in exchange for it.

Gold and silver, however, like every other commodity, vary in their value, are sometimes cheaper and sometimes dearer, sometimes of easier and sometimes of more difficult purchase. The quantity of labour which any particular quantity of them can purchase or command, or the quantity of other goods which it will exchange for, depends always upon the fertility or bareness of the mines which happen to be known about the time when such exchanges are made. The discovery of the abundant mines of America reduced, in the

sixteenth century, the value of gold and silver in Europe to about a third of what it had been before. As it costs less labour to bring those metals from the mine to the market, so when they were brought thither ²⁹ they could purchase or command less labour; and this revolution in their value, though perhaps the greatest, is by no means the only one of which history gives some account. But as a measure of quantity, such as the natural foot, fathom, or handful, which is continually varying in its own quantity, can never be an accurate measure of the quantity of other things; so a commodity which is itself continually varying in its own value, can never be an accurate measure of the value of other commodities. Equal quantities of labour, at all times and places, may be said to be ³⁰ of equal value to the labourer. In his ordinary state of health, strength and spirits; in the ordinary degree of his skill and dexterity, ^{30a} he must always lay down the same portion of his ease, his liberty, and his happiness. The price which he pays must always be the same, whatever may be the quantity of goods which he receives in return for it. Of these, indeed, it may sometimes purchase a greater and sometimes a smaller quantity; but it is their value which varies, not that of the labour which purchases them. At all times and places that is dear which it is difficult to come at, or which it costs much labour to acquire; and that cheap which is to be had easily, or with very little labour. Labour alone, therefore, never varying in its own value, is alone the ultimate and real standard by which the value of all commodities can at all times and places be estimated and compared. It is their real price; money is their nominal price only.

But though equal quantities of labour are always of equal value to the labourer, yet to the person who employs him they appear sometimes to be of greater and sometimes of smaller value. He purchases them sometimes with a greater and some-

²⁹ Ed. 1 reads "there."

³⁰ Ed. 1 reads "Equal quantities of labour must at all times and places be."

^{30a} The words from "In his ordinary state of health" to "dexterity" appear first in ed. 2.

times with a smaller quantity of goods, and to him the price of labour seems to vary like that of all other things. It appears to him dear in the one case, and cheap in the other. In reality, however, it is the goods which are cheap in the one case, and dear in the other.

In this popular sense, therefore, labour, like commodities, may be said to have a real and a nominal price. Its real price may be said to consist in the quantity of the necessities and conveniencies of life which are given for it; its nominal price, in the quantity of money. The labourer is rich or poor, is well or ill rewarded, in proportion to the real, not to the nominal price of his labour.

The distinction between the real and the nominal price of commodities and labour, is not a matter of mere speculation, but may sometimes be of considerable use in practice. The same real price is always of the same value; but on account of the variations in the value of gold and silver, the same nominal price is sometimes of very different values. When a landed estate, therefore, is sold with a reservation of a perpetual rent, if it is intended that this rent should always be of the same value, it is of importance to the family in whose favour it is reserved, that it should not consist in a particular sum of money.³¹ Its value would in this case be liable to variations of two different kinds; first, to those which arise from the different quantities of gold and silver which are contained at different times in coin of the same denomination; and, secondly, to those which arise from the different values of equal quantities of gold and silver at different times.

Princes and sovereign states have frequently fancied that they had a temporary interest to diminish the quantity of pure metal contained in their coins; but they seldom have fancied that they had any to augment it. The quantity of metal contained in the coins, I believe of all nations, has, ac-

³¹ "Be above all things careful how you make any composition or agreement for any long space of years to receive a certain price of money for the corn that is due to you, although for the present it may seem a tempting bargain."—Fleetwood, *Chronicon Preciosum*, p. 174.

cordingly, been almost continually diminishing, and hardly ever augmenting. Such variations therefore tend almost always to diminish the value of a money rent.

The discovery of the mines of America diminished the value of gold and silver in Europe. This diminution, it is commonly supposed, though I apprehend without any certain proof, is still going on gradually, and is likely to continue to do so for a long time. Upon this supposition, therefore, such variations are more likely to diminish, than to augment the value of a money rent, even though it should be stipulated to be paid, not in such a quantity of coined money of such a denomination (in so many pounds sterling, for example), but in so many ounces either of pure silver, or of silver of a certain standard.

The rents which have been reserved in corn have preserved their value much better than those which have been reserved in money, even where the denomination of the coin has not been altered. By the 18th of Elizabeth³² it was enacted, That a third of the rent of all college leases should be reserved in corn, to be paid, either in kind, or according to the current prices at the nearest public market. The money arising from this corn rent, though originally but a third of the whole, is in the present times, according to Doctor Blackstone, commonly near double of what arises from the other two-thirds.³³ The

³² C. 6, which applies to Oxford, Cambridge, Winchester and Eton, and provides that no college shall make any lease for lives or years of tithes, arable land or pasture without securing that at least one-third of "tholde" (presumably the whole not the old) rent should be paid in coin. The Act was promoted by Sir Thomas Smith to the astonishment, it is said, of his fellow-members of Parliament, who could not see what difference it would make. "But the knight took the advantage of the present cheapness; knowing hereafter grain would grow dearer, mankind daily multiplying, and licence being lately given for transportation. So that at this day much emolument redoundeth to the colleges in each university, by the passing of this Act; and though their rents stand still, their revenues do increase."—Fuller, *Hist. of the University of Cambridge*, 1655, p. 144, quoted in Strype, *Life of the learned Sir Thomas Smith*, 1698, p. 192.

³³ *Commentaries*, 1765, vol. ii, p. 322.

old money rents of colleges must, according to this account, have sunk almost to a fourth part of their ancient value; or are worth little more than a fourth part of the corn which they were formerly worth. But since the reign of Philip and Mary the denomination of the English coin has undergone little or no alteration, and the same number of pounds, shillings and pence have contained very nearly the same quantity of pure silver. This degradation, therefore, in the value of the money rents of colleges, has arisen altogether from the degradation in the value of silver.

When the degradation in the value of silver is combined with the diminution of the quantity of it contained in the coin of the same denomination, the loss is frequently still greater. In Scotland, where the denomination of the coin has undergone much greater alterations than it ever did in England, and in France, where it has undergone still greater than it ever did in Scotland, some ancient rents, originally of considerable value, have in this manner been reduced almost to nothing.

Equal quantities of labour will at distant times be purchased more nearly with equal quantities of corn, the subsistence of the labourer, than with equal quantities of gold and silver, or perhaps of any other commodity. Equal quantities of corn, therefore, will, at distant times, be more nearly of the same real value, or enable the possessor to purchase or command more nearly the same quantity of the labour of other people. They will do this, I say, more nearly than equal quantities of almost any other commodity; for even equal quantities of corn will not do it exactly. The subsistence of the labourer, or the real price of labour, as I shall endeavour to show hereafter, is very different upon different occasions; more liberal in a society advancing to opulence, than in one that is standing still; and in one that is standing still, than in one that is going backwards. Every other commodity, however, will at any particular time purchase a greater or smaller quantity of labour in proportion to the quantity of subsistence which it can purchase at that time. A rent therefore reserved in corn is liable only to the variations in the quantity of labour which

a certain quantity of corn can purchase. But a rent reserved in any other commodity is liable, not only to the variations in the quantity of labour which any particular quantity of corn can purchase, but to the variations in the quantity of corn which can be purchased by any particular quantity of that commodity.

Though the real value of a corn rent, it is to be observed however, varies much less from century to century than that of a money rent, it varies much more from year to year. The money price of labour, as I shall endeavour to show hereafter, does not fluctuate from year to year with the money price of corn, but seems to be every where accommodated, not to the temporary or occasional, but to the average or ordinary price of that necessary of life. The average or ordinary price of corn again is regulated, as I shall likewise endeavour to show hereafter, by the value of silver, by the richness or barrenness of the mines which supply the market with that metal, or by the quantity of labour which must be employed, and consequently of corn which must be consumed, in order to bring any particular quantity of silver ³⁴ from the mine to the market. But the value of silver, though it sometimes varies greatly from century to century, seldom varies much from year to year, but frequently continues the same, or very nearly the same, for half a century or a century together. The ordinary or average money price of corn, therefore, may, during so long a period, continue the same or very nearly the same too, and along with it the money price of labour, provided, at least, the society continues, in other respects, in the same or nearly in the same condition. In the mean time the temporary and occasional price of corn may frequently be double, one year, of what it had been the year before, or fluctuate, for example, from five and twenty to fifty shillings the quarter.³⁵ But when corn is at the latter price, not only the nominal, but the real value of a corn rent will be double

³⁴ Ed. 1 reads "it."

³⁵ Ed. 1 places the "for example" here.

of what it is when at the former, or will command double the quantity either of labour or of the greater part of other commodities; the money price of labour, and along with it that of most other things, continuing the same during all these fluctuations.

Labour, therefore, it appears evidently, is the only universal, as well as the only accurate measure of value, or the only standard by which we can compare the values of different commodities at all times and at all places. We cannot estimate, it is allowed, the real value of different commodities from century to century by the quantities of silver which were given for them. We cannot estimate it from year to year by the quantities of corn. By the quantities of labour we can, with the greatest accuracy, estimate it both from century to century and from year to year. From century to century, corn is a better measure than silver, because from century to century, equal quantities of corn will command the same quantity of labour more nearly than equal quantities of silver. From year to year, on the contrary, silver is a better measure than corn, because equal quantities of it will more nearly command the same quantity of labour.³⁶

³⁶ "In England and this part of the world, wheat being the constant and most general food, not altering with the fashion, not growing by chance: but as the farmers sow more or less of it, which they endeavour to proportion, as near as can be guessed to the consumption, abstracting the overplus of the precedent year in their provision for the next; and *vice versa*, it must needs fall out that it keeps the nearest proportion to its consumption (which is more studied and designed in this than other commodities) of anything, if you take it for seven or twenty years together: though perhaps the scarcity of one year, caused by the accidents of the season, may very much vary it from the immediately precedent or following. Wheat, therefore, in this part of the world (and that grain which is the constant general food of any other country) is the fittest measure to judge of the altered value of things in any long tract of time: and therefore wheat here, rice in Turkey, etc., is the fittest thing to reserve a rent in, which is designed to be constantly the same for all future ages. But money is the best measure

But though in establishing perpetual rents, or even in letting very long leases, it may be of use to distinguish between real and nominal price; it is of none in buying and selling, the more common and ordinary transactions of human life.

At the same time and place the real and the nominal price of all commodities are exactly in proportion to one another. The more or less money you get for any commodity, in the London market, for example, the more or less labour it will at that time and place enable you to purchase or command. At the same time and place, therefore, money is the exact measure of the real exchangeable value of all commodities. It is so, however, at the same time and place only.

Though at distant places, there is no regular proportion between the real and the money price of commodities, yet the merchant who carries goods from the one to the other has nothing to consider but their money price, or the difference between the quantity of silver for which he buys them, and that for which he is likely to sell them. Half an ounce of silver at Canton in China may command a greater quantity both of labour and of the necessities and conveniences of life, than an ounce at London. A commodity, therefore, which sells for half an ounce of silver at Canton may there be really dearer, of more real importance to the man who possesses it there, than a commodity which sells for an ounce at London is to³⁷ the man who possesses it at London. If a London merchant, however, can buy at Canton for half an ounce of silver, a commodity which he can afterwards sell at London for an ounce, he gains a hundred per cent. by the bargain, just as much as if an ounce of silver was at London exactly of the same value as at Canton. It is of no importance to him that

of the altered value of things in a few years: because its vent is the same and its quantity alters slowly. But wheat, or any other grain, cannot serve instead of money: because of its bulkiness and too quick change of its quantity."—Locke, *Some Considerations of the Consequences of the Lowering of Interest and Raising the Value of Money*, ed. of 1696, pp. 74, 75.

³⁷ Ed. 1 reads "than one which sells for an ounce at London to."

half an ounce of silver at Canton would have given him the command of more labour and of a greater quantity of the necessaries and conveniencies of life than an ounce can do at London. An ounce at London will always give him the command of double the quantity of all these, which half an ounce could have done there, and this is precisely what he wants.

As it is the nominal or money price of goods, therefore, which finally determines the prudence or imprudence of all purchases and sales, and thereby regulates almost the whole business of common life in which price is concerned, we cannot wonder that it should have been so much more attended to than the real price.

In such a work as this, however, it may sometimes be of use to compare the different real values of a particular commodity at different times and places, or the different degrees of power over the labour of other people which it may, upon different occasions, have given to those who possessed it. We must in this case compare, not so much the different quantities of silver for which it was commonly sold, as the different quantities of labour which those different quantities of silver could have purchased. But the current prices of labour at distant times and places can scarce ever be known with any degree of exactness. Those of corn, though they have in few places been regularly recorded, are in general better known and have been more frequently taken notice of by historians and other writers. We must generally, therefore, content ourselves with them, not as being always exactly in the same proportion as the current prices of labour, but as being the nearest approximation which can commonly be had to that proportion. I shall hereafter have occasion to make several comparisons of this kind.

In the progress of industry, commercial nations have found it convenient to coin several different metals into money; gold for larger payments, silver for purchases of moderate value, and copper, or some other coarse metal, for those of still smaller consideration. They have always, however, considered one of those metals as more peculiarly the measure of value

than any of the other two; and this preference seems generally to have been given to the metal which they happened first to make use of as the instrument of commerce. Having once begun to use it as their standard, which they must have done when they had no other money, they have generally continued to do so even when the necessity was not the same.

The Romans are said to have had nothing but copper money till within five years before the first Punic war,³⁸ when they first began to coin silver. Copper, therefore, appears to have continued always the measure of value in that republic. At Rome all accounts appear to have been kept, and the value of all estates to have been computed, either in *Asses* or in *Sestertii*. The *As* was always the denomination of a copper coin. The word *Sestertius* signifies two *Asses* and a half. Though the *Sestertius*, therefore, was originally³⁹ a silver coin, its value was estimated in copper. At Rome, one who owed a great deal of money, was said to have a great deal of other people's copper.⁴⁰

The northern nations who established themselves upon the ruins of the Roman empire, seem to have had silver money from the first beginning of their settlements, and not to have known either gold or copper coins for several ages thereafter. There were silver coins in England in the time of the Saxons; but there was little gold coined till the time of Edward III. nor any copper till that of James I. of Great Britain. In England, therefore, and for the same reason, I believe, in all other modern nations of Europe, all accounts are kept, and the value of all goods and of all estates is generally computed in silver: and when we mean to express the amount of a person's fortune, we seldom mention the number of guineas, but the number of pounds sterling⁴¹ which we suppose would be given for it.

Originally, in all countries, I believe, a legal tender of pay-

³⁸ Pliny, lib. xxxiii. c. 3. This note is not in ed. 1.

³⁹ Eds. 1 and 2 read "always."

⁴⁰ Habere aes alienum.

⁴¹ Ed. 1 does not contain "sterling."

ment could⁴² be made only in the coin of that metal,⁴³ which was peculiarly considered as the standard or measure of value. In England, gold was not considered as a legal tender for a long time after it was coined into money. The proportion between the values of gold and silver money was not fixed by any public law or proclamation; but was left to be settled by the market. If a debtor offered payment in gold, the creditor might either reject such payment altogether, or accept of it at such a valuation of the gold as he and his debtor could agree upon. Copper is not at present a legal tender, except in the change of the smaller silver coins. In this state of things the distinction between the metal which was the standard, and that which was not the standard, was something more than a nominal distinction.

In process of time, and as people became gradually more familiar with the use of the different metals in coin, and consequently better acquainted with the proportion between their respective values, it has in most countries, I believe, been found convenient to ascertain this proportion, and to declare by a public law⁴⁴ that a guinea, for example, of such a weight and fineness, should exchange for one-and-twenty shillings, or be a legal tender for a debt of that amount.⁴⁵ In this state of things, and during the continuance of any one regulated proportion of this kind, the distinction between the metal

⁴² Ed. 1 places the "originally" here.

⁴³ Ed. 1 places the "only" here.

⁴⁴ The Act, 19 Hen. VII., c. 5, ordered that certain gold coins should pass for the sums for which they were coined, and 5 and 6 Ed. VI. prescribed penalties for giving or taking more than was warranted by proclamation. The value of the guinea was supposed to be fixed by the proclamation of 1717, for which see *Economic Journal*, March, 1898. Lead tokens were coined by individuals in the reign of Elizabeth. James I. coined copper farthing tokens, but abstained from proclaiming them as money of that value. In 1672 copper halfpennies were issued, and both halfpennies and farthings were ordered to pass as money of those values in all payments under sixpence.—Harris, *Money and Coins*, pt. i., § 39; Liverpool, *Treatise on the Coins of the Realm*, 1805, pp. 130, 131.

⁴⁵ Ed. 1 reads "sum."

which is the standard, and that which is not the standard, becomes little more than a nominal distinction.⁴⁶

In consequence of any change, however, in this regulated proportion, this distinction becomes, or at least seems to become, something more than nominal again. If the regulated value of a guinea, for example, was either reduced to twenty, or raised to two-and-twenty shillings, all accounts being kept and almost all obligations for debt being expressed in silver money, the greater part of payments could in either case be made with the same quantity of silver money as before; but would require very different quantities of gold money; a greater in the one case, and a smaller in the other. Silver would appear to be more invariable in its value than gold. Silver would appear to measure the value of gold, and gold would not appear to measure the value of silver. The value of gold would seem to depend upon the quantity of silver which it would exchange for; and the value of silver would not seem to depend upon the quantity of gold which it would exchange for. This difference, however, would be altogether owing to the custom of keeping accounts, and of expressing the amount of all great and small sums rather in silver than in gold money. One of Mr. Drummond's notes for five-and-twenty or fifty guineas would, after an alteration of this kind, be still payable with five-and-twenty or fifty guineas in the same manner as before. It would, after such an alteration, be payable with the same quantity of gold as before, but with very different quantities of silver. In the payment of such a note, gold would appear to be more invariable in its value than silver. Gold would appear to measure the value of silver, and silver would not appear to measure the value of gold. If the custom of keeping accounts, and of expressing promissory notes and other obligations for money in this manner, should ever become general, gold, and not silver, would be considered as the metal which was peculiarly the standard or measure of value.

⁴⁶ *I.e.*, if 21 pounds may be paid with 420 silver shillings or with gold guineas it does not matter whether a "pound" properly signifies 20 silver shillings or $\frac{20}{21}$ of a gold guinea.

In reality, during the continuance of any one regulated proportion, between the respective values of the different metals in coin, the value of the most precious metal regulates the value of the whole coin.⁴⁷ Twelve copper pence contain half a pound, avoirdupois, of copper, of not the best quality, which, before it is coined, is seldom worth seven-pence in silver. But as by the regulation twelve such pence are ordered to exchange for a shilling, they are in the market considered as worth a shilling, and a shilling can at any time be had for them. Even before the late reformation of the gold coin of Great Britain,⁴⁸ the gold, that part of it at least which circulated in London and its neighbourhood, was in general less degraded below its standard weight than the greater part of the silver. One-and-twenty worn and defaced shillings, however, were considered as equivalent to a guinea, which perhaps, indeed, was worn and defaced too, but seldom so much so. The late regulations⁴⁹ have brought the gold coin as near perhaps to its standard weight as it is possible to bring the current coin of any nation; and the order, to receive no gold at the public offices but by weight, is likely to preserve it so, as long as that order is enforced. The silver coin still continues in the same worn and degraded state as before the reformation of the gold coin. In the market, however, one-and-twenty shillings of this degraded silver coin are still considered as worth a guinea of this excellent gold coin.

The reformation of the gold coin has evidently raised the value of the silver coin which can be exchanged for it.

In the English mint a pound weight of gold is coined into

⁴⁷ This happens to have been usually, though not always, true, but it is so simply because it has usually happened that the most precious metal in use as money has been made or become the standard. Gold was already the standard in England, though the fact was not generally recognised; see Harris, *Money and Coins*, pt. ii., §§ 36, 37.

⁴⁸ In 1774.

⁴⁹ These regulations, issued in 1774, provided that guineas should not pass when they had lost a certain portion of their weight, varying with their age.—Liverpool, *Coins of the Realm*, p. 216, note.

forty-four guineas and a half, which, at one-and-twenty shillings the guinea, is equal to forty-six pounds fourteen shillings and six-pence. An ounce of such gold coin, therefore, is worth 3 *l.* 17 *s.* 10½ *d.* in silver. In England no duty or seignorage is paid upon the coinage, and he who carries a pound weight or an ounce weight of standard gold bullion to the mint, gets back a pound weight or an ounce weight of gold in coin, without any deduction. Three pounds seventeen shillings and ten-pence halfpenny an ounce, therefore, is said to be the mint price of gold in England, or the quantity of gold coin which the mint gives in return for standard gold bullion.

Before the reformation of the gold coin, the price of standard gold bullion in the market had for many years been upwards of 3 *l.* 18 *s.* sometimes 3 *l.* 19 *s.* and very frequently 4 *l.* an ounce; that sum, it is probable, in the worn and degraded gold coin, seldom containing more than an ounce of standard gold. Since the reformation of the gold coin, the market price of standard gold bullion seldom exceeds 3 *l.* 17 *s.* 7 *d.* an ounce. Before the reformation of the gold coin, the market price was always more or less above the mint price. Since that reformation, the market price has been constantly below the mint price. But that market price is the same whether it is paid in gold or in silver coin. The late reformation of the gold coin, therefore, has raised not only the value of the gold coin, but likewise that of the silver coin in proportion to gold bullion, and probably too in proportion to all other commodities; though the price of the greater part of other commodities being influenced by so many other causes, the rise in the value either of gold or silver coin in proportion to them, may not be so distinct and sensible.

In the English mint a pound weight of standard silver bullion is coined into sixty-two shillings, containing, in the same manner, a pound weight of standard silver. Five shillings and two-pence an ounce, therefore, is said to be the mint price of silver in England, or the quantity of silver coin which the mint gives in return for standard silver bullion. Before the reformation of the gold coin, the market price of standard

silver bullion was, upon different occasions, five shillings and four-pence, five shillings and five-pence, five shillings and six-pence, five shillings and seven-pence, and very often five shillings and eight-pence an ounce. Five shillings and seven-pence, however, seems to have been the most common price. Since the reformation of the gold coin, the market price of standard silver bullion has fallen occasionally to five shillings and three-pence, five shillings and four-pence, and five shillings and five-pence an ounce, which last price it has scarce ever exceeded. Though the market price of silver bullion has fallen considerably since the reformation of the gold coin, it has not fallen so low as the mint price.

In the proportion between the different metals in the English coin, as copper is rated very much above its real value, so silver is rated somewhat below it. In the market of Europe, in the French coin and in the Dutch coin, an ounce of fine gold exchanges for about fourteen ounces of fine silver. In the English coin, it exchanges for about fifteen ounces, that is, for more silver than it is worth according to the common estimation of Europe.⁵⁰ But as the price of copper in bars is not, even in England, raised by the high price of copper in English coin, so the price of silver in bullion is not sunk by the low rate of silver in English coin. Silver in bullion still preserves its proper proportion to gold; for the same reason that copper in bars preserves its proper proportion to silver.⁵¹

Upon the reformation of the silver coin in the reign of William III. the price of silver bullion still continued to be somewhat above the mint price. Mr. Locke imputed this high price to the permission of exporting silver bullion, and to the

⁵⁰ Magens, *Universal Merchant*, ed. Horsley, 1753, pp. 53-55, gives the proportions thus: French coin, 1 to $14\frac{5803}{12279}$, Dutch, 1 to $14\frac{2250}{11247}$, English, 1 to $15\frac{1238}{11385}$.

⁵¹ Full weight silver coins would not remain in circulation, as the bullion in them was worth more reckoned in guineas and in the ordinary old and worn silver coins than the nominal amount stamped on them.

prohibition of exporting silver coin.⁵² This permission of exporting, he said, rendered the demand for silver bullion greater than the demand for silver coin. But the number of people who want silver coin for the common uses of buying and selling at home, is surely much greater than that of those who want silver bullion either for the use of exportation or for any other use. There subsists at present a like permission of exporting gold bullion, and a like prohibition of exporting gold coin; and yet the price of gold bullion has fallen below the mint price. But in the English coin silver was then, in the same manner as now, under-rated in proportion to gold; and the gold coin (which at that time too was not supposed to require any reformation) regulated then, as well as now, the real value of the whole coin. As the reformation of the silver coin did not then reduce the price of silver bullion to the mint price, it is not very probable that a like reformation will do so now.

Were the silver coin brought back as near to its standard weight as the gold, a guinea, it is probable, would, according to the present proportion, exchange for more silver in coin than it would purchase in bullion. The silver coin containing its full standard weight, there would in this case be a profit in melting it down, in order, first, to sell the bullion for gold coin, and afterwards to exchange this gold coin for silver coin to be melted down in the same manner. Some alteration in the present proportion seems to be the only method of preventing this inconveniency.

The inconveniency perhaps would be less if silver was rated in the coin as much above its proper proportion to gold as it is at present rated below it; provided it was at the same time en-

⁵² Locke, *Further Considerations Concerning Raising the Value of Money*, 2nd ed., 1695, pp. 58-60. The exportation of foreign coin (misprinted "kind" in Pickering) or bullion of gold or silver was permitted by 15 Car. II., c. 7, on the ground that it was "found by experience that" money and bullion were "carried in greatest abundance (as to a common market) to such places as give free liberty for exporting the same" and in order "the better to keep in and increase the current coins" of the kingdom.

acted that silver should not be a legal tender for more than the change of a guinea; in the same manner as copper is not a legal tender for more than the change of a shilling. No creditor could in this case be cheated in consequence of the high valuation of silver in coin; as no creditor can at present be cheated in consequence of the high valuation of copper. The bankers only would suffer by this regulation. When a run comes upon them they sometimes endeavour to gain time by paying in six-pences, and they would be precluded by this regulation from this discreditable method of evading immediate payment. They would be obliged in consequence to keep at all times in their coffers a greater quantity of cash than at present; and though this might no doubt be a considerable inconveniency to them, it would at the same time be a considerable security to their creditors.⁵³

Three pounds seventeen shillings and ten-pence halfpenny (the mint price of gold) certainly does not contain, even in our present excellent gold coin, more than an ounce of standard gold, and it may be thought, therefore, should not purchase more standard bullion. But gold in coin is more convenient than gold in bullion, and though, in England, the coinage is free, yet the gold which is carried in bullion to the mint, can seldom be returned in coin to the owner till after a delay of several weeks. In the present hurry of the mint, it could not be returned till after a delay of several months. This delay is equivalent to a small duty, and renders gold in coin somewhat more valuable than an equal quantity of gold in bullion.⁵⁴ If in the English coin silver was rated according to its proper proportion to gold, the price of silver bullion would probably fall below the mint price even without any reformation of the silver coin; the value even of the present worn and defaced silver coin being regulated by the

⁵³ Harris, writing nearly twenty years earlier, had said, "it would be a ridiculous and vain attempt to make a standard integer of gold, whose parts should be silver; or to make a motley standard, part gold and part silver."—*Money and Coins*, pt. 1., § 36.

⁵⁴ *I.e.*, an ounce of standard gold would not actually fetch £3 17s. 10½d. if sold for cash down.

value of the excellent gold coin for which it can be changed.

A small seignorage or duty upon the coinage of both gold and silver would probably increase still more the superiority of those metals in coin above an equal quantity of either of them in bullion. The coinage would in this case increase the value of the metal coined in proportion to the extent of this small duty; for the same reason that the fashion increases the value of plate in proportion to the price of that fashion. The superiority of coin above bullion would prevent the melting down of the coin, and would discourage its exportation. If upon any public exigency it should become necessary to export the coin, the greater part of it would soon return again of its own accord. Abroad it could sell only for its weight in bullion. At home it would buy more than that weight. There would be a profit, therefore, in bringing it home again. In France a seignorage of about eight per cent. is imposed upon the coinage, and the French coin, when exported, is said to return home again of its own accord.

The occasional fluctuations in the market price of gold and silver bullion arise from the same causes as the like fluctuations in that of all other commodities. The frequent loss of those metals from various accidents by sea and by land, the continual waste of them in gilding and plating, in lace and embroidery, in the wear and tear of coin, and in that of plate;⁵⁵ require, in all countries which possess no mines of their own, a continual importation, in order to repair this loss and this waste. The merchant importers, like all other merchants we may believe, endeavour, as well as they can, to suit their occasional importations to what, they judge, is likely to be the immediate demand. With all their attention, however, they sometimes over-do the business, and sometimes under-do it. When they import more bullion than is wanted, rather than incur the risk and trouble of exporting it again, they are sometimes willing to sell a part of it for something less than the ordinary or average price. When, on the other hand, they

⁵⁵ Ed. 1 reads "in the tear and wear of coin, and in the tear and wear of plate."

import less than is wanted, they get something more than this price. But when, under all those occasional fluctuations, the market price either of gold or silver bullion continues for several years together steadily and constantly, either more or less above, or more or less below the mint price: we may be assured that this steady and constant, either superiority or inferiority of price, is the effect of something in the state of the coin, which, at that time, renders a certain quantity of coin either of more value or of less value than the precise quantity of bullion which it ought to contain. The constancy and steadiness of the effect, supposes a proportionable constancy and steadiness in the cause.

The money of any particular country is, at any particular time and place, more or less an accurate measure of value according as the current coin is more or less exactly agreeable to its standard, or contains more or less exactly the precise quantity of pure gold or pure silver which it ought to contain. If in England, for example, forty-four guineas and a half contained exactly a pound weight of standard gold, or eleven ounces of fine gold and one ounce of alloy, the gold coin of England would be as accurate a measure of the actual value of goods at any particular time and place as the nature of the thing would admit. But if, by rubbing and wearing, forty-four guineas and a half generally contain less than a pound weight of standard gold; the diminution, however, being greater in some pieces than in others; the measure of value comes to be liable to the same sort of uncertainty to which all other weights and measures are commonly exposed. As it rarely happens that these are exactly agreeable to their standard, the merchant adjusts the price of his goods, as well as he can, not to what those weights and measures ought to be, but to what, upon an average, he finds by experience they actually are. In consequence of a like disorder in the coin, the price of goods comes, in the same manner, to be adjusted, not to the quantity of pure gold or silver which the coin ought to contain, but to that which, upon an average, it is found by experience it actually does contain.

By the money-price of goods, it is to be observed, I under-

stand always the quantity of pure gold or silver for which they are sold, without any regard to the denomination of the coin. Six shillings and eight-pence, for example, in the time of Edward I., I consider as the same money-price with a pound sterling in the present times; because it contained, as nearly as we can judge, the same quantity of pure silver.

Of the Component Parts of the Price of Commodities

In that early and rude state of society which precedes both the accumulation of stock and the appropriation of land, the proportion between the quantities of labour necessary for acquiring different objects seems to be the only circumstance which can afford any rule for exchanging them for one another. If among a nation of hunters, for example, it usually costs twice the labour to kill a beaver which it does to kill a deer, one beaver should naturally exchange for or be worth two deer. It is natural that what is usually the produce of two days or two hours labour, should be worth double of what is usually the produce of one day's or one hour's labour.

If the one species of labour should be more severe than the other, some allowance will naturally be made for this superior hardship; and the produce of one hour's labour in the one way may frequently exchange for that of two hours labour in the other.

Or if the one species of labour requires an uncommon degree of dexterity and ingenuity, the esteem which men have for such talents, will naturally give a value to their produce, superior to what would be due to the time employed about it. Such talents can seldom be acquired but in consequence of long application, and the superior value of their produce may frequently be no more than a reasonable compensation for the time and labour which must be spent in acquiring them.

In the advanced state of society, allowances of this kind, for superior hardship and superior skill, are commonly made in the wages of labour; and something of the same kind must probably have taken place in its earliest and rudest period.

In this state of things, the whole produce of labour belongs to the labourer; and ⁵⁶ the quantity of labour commonly employed in acquiring or producing any commodity, is the only circumstance which can regulate the quantity of labour which it ought commonly to purchase, command, or exchange for.

As soon as stock has accumulated in the hands of particular persons, some of them will naturally employ it in setting to work industrious people, whom they will supply with materials and subsistence, in order to make a profit by the sale of their work, or by what their labour adds to the value of the materials. In exchanging the complete manufacture either for money, for labour, or for other goods, over and above what may be sufficient to pay the price of the materials, and the wages of the workmen, something must be given for the profits of the undertaker of the work who hazards his stock in this adventure. The value which the workmen add to the materials, therefore, resolves itself in this case into two parts, of which the one pays their wages, the other the profits of their employer upon the whole stock of materials and wages which he advanced. He could have no interest to employ them, unless he expected from the sale of their work something more than what was sufficient to replace his stock to him; and he could have no interest to employ a great stock rather than a small one, unless his profits were to bear some proportion to the extent of his stock.

The profits of stock, it may perhaps be thought, are only a different name for the wages of a particular sort of labour, the labour of inspection and direction. They are, however, altogether different, are regulated by quite sufficient principles, and bear no proportion to the quantity, the hardship, or the ingenuity of this supposed labour of inspection and

⁵⁶ Ed. 1 does not contain "the whole produce of labour belongs to the labourer; and." The words, however, occur in all eds.

direction. They are regulated altogether by the value of the stock employed, and are greater or smaller in proportion to the extent of this stock. Let us suppose, for example, that in some particular place, where the common annual profits of manufacturing stock are ten per cent. there are two different manufactures, in each of which twenty workmen are employed at the rate of fifteen pounds a year each, or at the expence of three hundred a year in each manufactory. Let us suppose too, that the coarse materials annually wrought up in the one cost only seven hundred pounds, while the finer materials in the other cost seven thousand. The capital annually employed⁵⁷ in the one will in this case amount only to one thousand pounds; whereas that employed in the other will amount to seven thousand three hundred pounds. At the rate of ten per cent. therefore, the undertaker of the one will expect an yearly profit of about one hundred pounds only; while that of the other will expect about seven hundred and thirty pounds. But though their profits are so very different, their labour of inspection and direction may be either altogether or very nearly the same. In many great works, almost the whole labour of this kind is⁵⁸ committed to some principal clerk. His wages properly express the value of this labour of inspection and direction. Though in settling them some regard is had commonly, not only to his labour and skill, but to the trust which is reposed in him, yet they never bear any regular proportion to the capital of which he oversees the management; and the owner of this capital, though he is thus discharged of almost all labour, still expects that his profits should bear a regular proportion to his capital.⁵⁹ In the price of commodities, therefore, the profits of stock constitute a component part⁶⁰ altogether different from the wages of labour, and regulated by quite different principles.

In this state of things, the whole produce of labour does

⁵⁷ "The capital annually employed" is the working expenses for twelve months, not the capital in the usual modern sense.

⁵⁸ Ed. 1 inserts "frequently."

⁵⁹ Eds. 1 and 2 read "proportion to it."

⁶⁰ Ed. 1 reads "profits of stock are a source of value."

not always belong to the labourer. He must in most cases share it with the owner of the stock which employs him. Neither is the quantity of labour commonly employed in acquiring or producing any commodity, the only circumstance⁶¹ which can regulate the quantity which it ought commonly to purchase, command, or exchange for. An additional quantity, it is evident, must be due for the profits of the stock which advanced the wages and furnished the materials of that labour.

As soon as the land of any country has all become private property, the landlords, like all other men, love to reap where they never sowed,⁶² and demand a rent even for its natural produce. The wood of the forest, the grass of the field, and all the natural fruits of the earth, which, when land was in common, cost the labourer only the trouble of gathering them, come, even to him,⁶³ to have an additional price fixed upon them. He must give up to the landlord a portion of what his labour either collects or produces. This portion, or, what comes to the same thing, the price of this portion, constitutes the rent of land, and in the price of the greater part of commodities makes a third component part.⁶⁴

⁶¹ Ed. 1 reads from the beginning of the paragraph: "In this state of things, therefore, the quantity of labour commonly employed in acquiring or producing any commodity is by no means the only circumstance."

⁶² Buchanan, ed. *Wealth of Nations*, 1814, vol. i., p. 80, says: "They do so. But the question is why this apparently unreasonable demand is so generally complied with. Other men love also to reap where they never sowed, but the landlords alone, it would appear, succeed in so desirable an object."

⁶³ Ed. 1 does not contain "the labourer" and "even to him."

⁶⁴ Ed. 1 in place of these two sentences reads: "Men must then pay for the licence to gather them; and in exchanging them either for money, for labour, or for other goods, over and above what is due, both for the labour of gathering them, and for the profits of the stock which employs that labour, some allowance must be made for the price of the licence, which constitutes the first rent of land. In the price therefore of the greater part of commodities the rent of land comes in this manner to constitute a third source of value. In this state of things, neither the quantity of labour com-

The real value of all the different component parts of price, it must be observed, is measured⁶⁵ by the quantity of labour which they can, each of them, purchase or command. Labour measures the value not only of that part of price which resolves itself into labour, but of that which resolves itself into rent, and of that which resolves itself into profit.

In every society the price of every commodity finally resolves itself into some one or other, or all of those three parts; and in every improved society, all the three enter more or less, as component parts, into the price of the far greater part of commodities.

In the price of corn, for example, one part pays the rent of the landlord, another pays the wages or maintenance of the labourers and labouring cattle⁶⁶ employed in producing it, and the third pays the profit of the farmer. These three parts seem either immediately or ultimately to make up the whole price of corn. A fourth part, it may perhaps be thought, is necessary for replacing the stock of the farmer, or for compensating the wear and tear⁶⁷ of his labouring cattle, and other instruments of husbandry. But it must be considered that the price of any instrument of husbandry, such as a labouring horse, is itself made up of the same three parts; the rent of the land upon which he is reared, the labour of tending and rearing him, and the profits of the farmer who

monly employed in acquiring or producing any commodity, nor the profits of the stock which advanced the wages and furnished the materials of that labour, are the only circumstances which can regulate the quantity of labour which it ought commonly to purchase, command or exchange for. A third circumstance must likewise be taken into consideration; the rent of the land; and the commodity must commonly purchase, command or exchange for, an additional quantity of labour, in order to enable the person who brings it to market to pay this rent."

⁶⁵ Ed. 1 reads "The real value of all the different component parts of price is in this manner measured."

⁶⁶ Smith overlooks the fact that his inclusion of the maintenance of labouring cattle here as a sort of wages requires him to include it in the national income or "wealth of the nation," and therefore to reckon the cattle themselves as part of the nation.

⁶⁷ Ed. 1 reads "tear and wear."

advances both the rent of this land, and the wages of this labour. Though the price of the corn, therefore, may pay the price as well as the maintenance of the horse, the whole price still resolves itself either immediately or ultimately into the same three parts of rent, labour,⁶⁸ and profit.

In the price of flour or meal, we must add to the price of the corn, the profits of the miller, and the wages of his servants; in the price of bread, the profits of the baker, and the wages of his servants; and in the price of both, the labour of transporting the corn from the house of the farmer to that of the miller, and from that of the miller to that of the baker, together with the profits of those who advance the wages of that labour.

The price of flax resolves itself into the same three parts as that of corn. In the price of linen we must add to this price the wages of the flax-dresser, of the spinner, of the weaver, of the bleacher, &c. together with the profits of their respective employers.

As any particular commodity comes to be more manufactured, that part of the price which resolves itself into wages and profit, comes to be greater in proportion to that which resolves itself into rent. In the progress of the manufacture, not only the number of profits increase, but every subsequent profit is greater than the foregoing; because the capital from which it is derived must always be greater. The capital which employs the weavers, for example, must be greater than that which employs the spinners; because it not only replaces that capital with its profits, but pays, besides, the wages of the weavers; and the profits must always bear some proportion to the capital.⁶⁹

In the most improved societies, however, there are always

⁶⁸ The use of "labour" instead of the more natural "wages" here is more probably the result of its use five lines higher up than of any feeling of difficulty about the maintenance of cattle.

⁶⁹ The fact that the later manufacturer has to replace what is here called the capital, *i.e.*, the periodical expenditure of the earlier manufacturer, does not necessarily require him to have a greater capital to deal with the same produce. It need not be greater if he requires less machinery and buildings and a smaller stock of materials.

a few commodities of which the price resolves itself into two parts only, the wages of labour, and the profits of stock; and a still smaller number, in which it consists altogether in the wages of labour. In the price of sea-fish, for example, one part pays the labour of the fishermen, and the other the profits of the capital employed in the fishery. Rent very seldom makes any part of it, though it does sometimes, as I shall shew hereafter. It is otherwise, at least through the greater part of Europe, in river fisheries. A salmon fishery pays a rent, and rent, though it cannot well be called the rent of land, makes a part of the price of a salmon as well as wages and profit. In some parts of Scotland a few poor people make a trade of gathering, along the sea-shore, those little variegated stones commonly known by the name of Scotch Pebbles. The price which is paid to them by the stone-cutter is altogether the wages of their labour; neither rent nor profit make any part of it.

But the whole price of any commodity must still finally resolve itself into some one or other, or all of those three parts; as whatever part of it remains after paying the rent of the land, and the price of the whole labour employed in raising, manufacturing, and bringing it to market, must necessarily be profit to somebody.⁷⁰

As the price or exchangeable value of every particular commodity, taken separately, resolves itself into some one or other, or all of those three parts; so that of all the commodities which compose the whole annual produce of the labour of every country, taken complexly, must resolve itself into the same three parts, and be parcelled out among different inhabitants of the country, either as the wages of their labour, the profits of their stock, or the rent of their land.⁷¹ The whole of what is annually either collected or produced by the labour of every society, or what comes to the same

⁷⁰ Only true if "commodity" be understood to include solely goods which constitute income.

⁷¹ The "whole annual produce" must be taken to mean the income and not the whole mass of goods produced, including those which perish or are used up in the creation of others.

thing, the whole price of it, is in this manner originally distributed among some of its different members. Wages, profit, and rent, are the three original sources of all revenue as well as of all exchangeable value. All other revenue⁷² is ultimately derived from some one or other of these.

Whoever derives his revenue from a fund which is his own, must draw it either from his labour, from his stock, or from his land. The revenue derived from labour is called wages. That derived from stock, by the person who manages or employs it, is called profit. That derived from it by the person who does not employ it himself, but lends it to another, is called the interest or the use of money. It is the compensation which the borrower pays to the lender, for the profit which he has an opportunity of making by the use of the money. Part of that profit naturally belongs to the borrower, who runs the risk and takes the trouble of employing it; and part to the lender, who affords him the opportunity of making this profit. The interest of money is always a derivative revenue, which, if it is not paid from the profit which is made by the use of the money, must be paid from some other source of revenue, unless perhaps the borrower is a spendthrift, who contracts a second debt in order to pay the interest of the first. The revenue which proceeds altogether from land, is called rent, and belongs to the landlord. The revenue of the farmer is derived partly from his labour, and partly from his stock. To him, land is only the instrument which enables him to earn the wages of this labour, and to make the profits of this stock. All taxes, and all the revenue which is founded upon them, all salaries, pensions, and annuities of every kind, are ultimately derived from some one or other of those three original sources of revenue, and are paid either immediately or mediately from the wages of labour, the profits of stock, or the rent of land.

When those three different sorts of revenue belong to

⁷² Some parts of this "other revenue," *viz.*, interest and taxes, are mentioned in the next paragraph. It is perhaps also intended to include the rent of houses.

different persons, they are readily distinguished; but when they belong to the same they are sometimes confounded with one another, at least in common language.

A gentleman who farms a part of his own estate, after paying the expence of cultivation, should gain both the rent of the landlord and the profit of the farmer. He is apt to denominate, however, his whole gain, profit, and thus confounds rent with profit, at least in common language. The greater part of our North American and West Indian planters are in this situation. They farm, the greater part of them, their own estates, and accordingly we seldom hear of the rent of a plantation, but frequently of its profit.

Common farmers seldom employ any overseer to direct the general operations of the farm. They generally too work a good deal with their own hands, as ploughmen, harrowers, &c. What remains of the crop after paying the rent, therefore, should not only replace to them their stock employed in cultivation, together with its ordinary profits, but pay them the wages which are due to them, both as labourers and overseers. Whatever remains, however, after paying the rent and keeping up the stock, is called profit. But wages evidently make a part of it. The farmer, by saving these wages, must necessarily gain them. Wages, therefore, are in this case confounded with profit.

An independent manufacturer, who has stock enough both to purchase materials, and to maintain himself till he can carry his work to market, should gain both the wages of a journeyman who works under a master, and the profit which that master makes by the sale of the journeyman's work.⁷⁸ His whole gains, however, are commonly called profit, and wages are, in this case too, confounded with profit.

A gardener who cultivates his own garden with his own hands, unites in his own person the three different characters, of landlord, farmer, and labourer. His produce, therefore, should pay him the rent of the first, the profit of the second, and the wages of the third. The whole, however, is

⁷⁸ Ed. 1 reads "sale of his work."

commonly considered as the earnings of his labour. Both rent and profit are, in this case, confounded with wages.

As in a civilized country there are but few commodities of which the exchangeable value arises from labour only, rent and profit contributing largely to that of the far greater part of them, so the annual produce of its labour will always be sufficient to purchase or command a much greater quantity of labour than what was employed in raising, preparing, and bringing that produce to market. If the society were⁷⁴ annually to employ all the labour which it can annually purchase, as the quantity of labour would increase greatly every year, so the produce of every succeeding year would be of vastly greater value than that of the foregoing. But there is no country in which the whole annual produce is employed in maintaining the industrious. The idle every where consume a great part of it; and according to the different proportions in which it is annually divided between those two different orders of people, its ordinary or average value must either annually increase, or diminish, or continue the same from one year to another.

*Of the Natural and Market Price of Commodities*⁷⁵

There is in every society or neighbourhood an ordinary or average rate both of wages and profit in every different employment of labour and stock. This rate is naturally regulated, as I shall show hereafter, partly by the general circumstances of the society, their riches or poverty, their advancing, stationary, or declining condition; and partly by the particular nature of each employment.

There is likewise in every society or neighbourhood an

⁷⁴ Eds. 1-3 read "was."

⁷⁵ The chapter follows *Lectures*, pp. 173-182, very closely.

ordinary or average rate of rent, which is regulated too, as I shall show hereafter, partly by the general circumstances of the society or neighbourhood in which the land is situated, and partly by the natural or improved fertility of the land.

These ordinary or average rates may be called the natural rates of wages, profit, and rent, at the time and place in which they commonly prevail.

When the price of any commodity is neither more nor less than what is sufficient to pay the rent of the land, the wages of the labour, and the profits of the stock employed in raising, preparing, and bringing it to market, according to their natural rates, the commodity is then sold for what may be called its natural price.

The commodity is then sold precisely for what it is worth, or for what it really costs the person who brings it to market; for though in common language what is called the prime cost of any commodity does not comprehend the profit of the person who is to sell it again, yet if he sells it at a price which does not allow him the ordinary rate of profit in his neighbourhood, he is evidently a loser by the trade; since by employing his stock in some other way he might have made that profit. His profit, besides, is his revenue, the proper fund of his subsistence. As, while he is preparing and bringing the goods to market, he advances to his workmen their wages, or their subsistence; so he advances to himself, in the same manner, his own subsistence, which is generally suitable to the profit which he may reasonably expect from the sale of his goods. Unless they yield him this profit, therefore, they do not repay him what they may very properly be said to have really cost him.

Though the price, therefore, which leaves him this profit, is not always the lowest at which a dealer may sometimes sell his goods, it is the lowest at which he is likely to sell them for any considerable time; at least where there is perfect liberty,⁷⁶ or where he may change his trade as often as he pleases.

⁷⁶ The same phrase occurs below.

The actual price at which any commodity is commonly sold is called its market price. It may either be above, or below, or exactly the same with its natural price.

The market price of every particular commodity is regulated by the proportion between the quantity which is actually brought to market, and the demand of those who are willing to pay the natural price of the commodity, or the whole value of the rent, labour, and profit, which must be paid in order to bring it thither. Such people may be called the effectual demanders, and their demand the effectual demand; since it may be sufficient to effectuate the bringing of the commodity to market. It is different from the absolute demand. A very poor man may be said in some sense to have a demand for a coach and six; he might like to have it; but his demand is not an effectual demand, as the commodity can never be brought to market in order to satisfy it.

When the quantity of any commodity which is brought to market falls short of the effectual demand, all those who are willing to pay the whole value of the rent, wages, and profit, which must be paid in order to bring it thither, cannot be supplied with the quantity which they want. Rather than want it altogether, some of them will be willing to give more. A competition will immediately begin among them, and the market price will rise more or less above the natural price, according as either the greatness of the deficiency, or the wealth and wanton luxury of the competitors, happen to animate more or less the eagerness of the competition. Among competitors of equal wealth and luxury the same deficiency⁷⁷ will generally occasion a more or less eager competition, according as the acquisition of the commodity happens to be of more or less importance to them.⁷⁸ Hence the exorbitant price of the necessities of life during the blockade of a town or in a famine.

⁷⁷ Ed. 1, beginning three lines higher up, reads "according as the greatness of the deficiency increases more or less the eagerness of this competition. The same deficiency."

⁷⁸ Ed. 1 reads "the competitors."

When the quantity brought to market exceeds the effectual demand, it cannot be all sold to those who are willing to pay the whole value of the rent, wages and profit, which must be paid in order to bring it thither. Some part must be sold to those who are willing to pay less, and the low price which they give for it must reduce the price of the whole. The market price will sink more or less below the natural price, according as the greatness of the excess increases more or less the competition of the sellers, or according as it happens to be more or less important to them to get immediately rid of the commodity. The same excess in the importation of perishable, will occasion a much greater competition than in that of durable commodities; in the importation of oranges, for example, than in that of old iron.

When the quantity brought to market is just sufficient to supply the effectual demand and no more, the market price naturally comes to be either exactly, or as nearly as can be judged of, the same with the natural price. The whole quantity upon hand can be disposed of for this price, and cannot be disposed of for more. The competition of the different dealers obliges them all to accept of this price, but does not oblige them to accept of less.

The quantity of every commodity brought to market naturally suits itself to the effectual demand. It is the interest of all those who employ their land, labour, or stock, in bringing any commodity to market, that the quantity never should exceed the effectual demand; and it is the interest of all other people that it never should fall short of that demand.⁷⁹

If at any time it exceeds the effectual demand, some of the component parts of its price must be paid below their natural rate. If it is rent, the interest of the landlords will immediately prompt them to withdraw a part of their land; and if it is wages or profit, the interest of the labourers in the one case, and of their employers in the other, will prompt them to withdraw a part of their labour or stock from this employment. The quantity brought to market will soon be no more

⁷⁹ Ed. 1 reads "fall short of it."

than sufficient to supply the effectual demand. All the different parts of its price will rise to their natural rate, and the whole price to its natural price.

If, on the contrary, the quantity brought to market should at any time fall short of the effectual demand, some of the component parts of its price must rise above their natural rate. If it is rent, the interest of all other landlords will naturally prompt them to prepare more land for the raising of this commodity; if it is wages or profit, the interest of all other labourers and dealers will soon prompt them to employ more labour and stock in preparing and bringing it to market. The quantity brought thither will soon be sufficient to supply the effectual demand. All the different parts of its price will soon sink to their natural rate, and the whole price to its natural price.

The natural price, therefore, is, as it were, the central price, to which the prices of all commodities are continually gravitating. Different accidents may sometimes keep them suspended a good deal above it, and sometimes force them down even somewhat below it. But whatever may be the obstacles which hinder them from settling in this center of repose and continuance, they are constantly tending towards it.

The whole quantity of industry annually employed in order to bring any commodity to market, naturally suits itself in this manner to the effectual demand. It naturally aims at bringing always that precise quantity thither which may be sufficient to supply, and no more than supply, that demand.

But in some employments the same quantity of industry will in different years produce very different quantities of commodities; while in others it will produce always the same, or very nearly the same. The same number of labourers in husbandry will, in different years, produce very different quantities of corn, wine, oil, hops, &c. But the same number of spinners and weavers will every year produce the same or very nearly the same quantity of linen and woollen cloth. It is only the average produce of the one species of industry which can be suited in any respect to the effectual demand; and as its actual produce is frequently much greater and

frequently much less than its average produce, the quantity of the commodities brought to market will sometimes exceed a good deal, and sometimes fall short a good deal, of the effectual demand. Even though that demand therefore should continue always the same, their market price will be liable to great fluctuations, will sometimes fall a good deal below, and sometimes rise a good deal above, their natural price. In the other species of industry, the produce of equal quantities of labour being always the same, or very nearly the same, it can be more exactly suited to the effectual demand. While that demand continues the same, therefore, the market price of the commodities is likely to do so too, and to be either altogether, or as nearly as can be judged of, the same with the natural price. That the price of linen and woollen cloth is liable neither to such frequent nor to such great variations as the price of corn, every man's experience will inform him. The price of the one species of commodities varies only with the variations in the demand: That of the other varies not only with the variations in the demand, but with the much greater and more frequent variations in the quantity of what is brought to market in order to supply that demand.

The occasional and temporary fluctuations in the market price of any commodity fall chiefly upon those parts of its price which resolve themselves into wages and profit. That part which resolves itself into rent is less affected by them. A rent certain in money is not in the least affected by them either in its rate or in its value. A rent which consists either in a certain proportion or in a certain quantity of the rude produce, is no doubt affected in its yearly value by all the occasional and temporary fluctuations in the market price of that rude produce; but it is seldom affected by them in its yearly rate. In settling the terms of the lease, the landlord and farmer endeavour, according to their best judgment, to adjust that rate, not to the temporary and occasional, but to the average and ordinary price of the produce.

Such fluctuations affect both the value and the rate either of wages or of profit, according as the market happens to be either over-stocked or under-stocked with commodities or with labour; with work done, or with work to be done.

A public mourning raises the price of black cloth (with which the market is almost always under-stocked upon such occasions), and augments the profits of the merchants who possess any considerable quantity of it. It has no effect upon the wages of the weavers. The market is under-stocked with commodities, not with labour; with work done, not with work to be done. It raises the wages of journeymen taylors. The market is here under-stocked with labour. There is an effectual demand for more⁸⁰ labour, for more work to be done than can be had. It sinks the price of coloured silks and cloths, and thereby reduces the profits of the merchants who have any considerable quantity of them upon hand. It sinks too the wages of the workmen employed in preparing such commodities, for which all demand is stopped for six months, perhaps for a twelvemonth. The market is here over-stocked both with commodities and with labour.

But though the market price of every particular commodity is in this manner continually gravitating, if one may say so, towards the natural price, yet sometimes particular accidents, sometimes natural causes, and sometimes particular regulations of police, may, in many commodities, keep up the market price, for a long time together, a good deal above the natural price.

When by an increase in the effectual demand, the market price of some particular commodity happens to rise a good deal above the natural price, those who employ their stocks in supplying that market are generally careful to conceal this change. If it was commonly known, their great profit would tempt so many new rivals to employ their stocks in the same way, that, the effectual demand being fully supplied, the market price would soon be reduced to the natural price, and perhaps for some time even below it. If the market is at a great distance from the residence of those who supply it, they may sometimes be able to keep the secret for several years together, and may so long enjoy their extraordinary profits without any new rivals. Secrets of this kind, however, it must be acknowledged, can seldom be long kept; and the extraordi-

⁸⁰ Ed. 1 does not contain "more."

nary profit can last very little longer than they are kept.

Secrets in manufactures are capable of being longer kept than secrets in trade. A dyer who has found the means of producing a particular colour with materials which cost only half the price of those commonly made use of, may, with good management, enjoy the advantage of his discovery as long as he lives, and even leave it as a legacy to his posterity. His extraordinary gains arise from the high price which is paid for his private labour. They properly consist in the high wages of that labour. But as they are repeated upon every part of his stock, and as their whole amount bears, upon that account, a regular proportion to it, they are commonly considered as extraordinary profits of stock.⁸¹

Such enhancements of the market price are evidently the effects of particular accidents, of which, however, the operation may sometimes last for many years together.

Some natural productions require such a singularity of soil and situation, that all the land in a great country, which is fit for producing them, may not be sufficient to supply the effectual demand. The whole quantity brought to market, therefore, may be disposed of to those who are willing to give more than what is sufficient to pay the rent of the land which produced them, together with the wages of the labour, and the profits of the stock which were employed in preparing and bringing them to market, according to their natural rates. Such commodities may continue for whole centuries together to be sold at this high price;⁸² and that part of it which resolves itself into the rent of land is in this case the part which is generally paid above its natural rate. The rent of the land which affords such singular and esteemed productions, like the rent of some vineyards in France of a peculiarly

⁸¹ They are called profits simply because all the gains of the master-manufacturer are called profits. They can scarcely be said to have been "considered" at all; if they had been, they would doubtless have been pronounced to be, in the words of the next paragraph, "the effects of a particular accident," namely, the possession of peculiar knowledge on the part of the dyer.

⁸² Ed. 1 places "for whole centuries together" here instead of where printed.

happy soil and situation, bears no regular proportion to the rent of other equally fertile and equally well-cultivated land in its neighbourhood. The wages of the labour and the profits of the stock employed in bringing such commodities to market, on the contrary, are seldom out of their natural proportion to those of the other employments of labour and stock in their neighbourhood.

Such enhancements of the market price are evidently the effect of natural causes which may hinder the effectual demand from ever being fully supplied, and which may continue, therefore, to operate for ever.

A monopoly granted either to an individual or to a trading company has the same effect as a secret in trade or manufactures. The monopolists, by keeping the market constantly under-stocked, by never fully supplying the effectual demand, sell their commodities much above the natural price, and raise their emoluments, whether they consist in wages or profit, greatly above their natural rate.

The price of monopoly is upon every occasion the highest which can be got. The natural price, or the price of free competition, on the contrary, is the lowest which can be taken, not upon every occasion indeed, but for any considerable time together. The one is upon every occasion the highest which can be squeezed out of the buyers, or which, it is supposed, they will consent to give: The other is the lowest which the sellers can commonly afford to take, and at the same time continue their business.

The exclusive privileges of corporations, statutes of apprenticeship,⁸³ and all those laws which restrain, in particular employments, the competition to a smaller number than might otherwise go into them, have the same tendency,

⁸³ Playfair, in a note on this passage, ed. *Wealth of Nations*, 1805, vol. i., p. 97, says: "This observation about corporations and apprenticeships scarcely applies at all to the present day. In London, for example, the freemen only can carry on certain businesses within the city: there is not one of those businesses that may not be carried on elsewhere, and the produce sold in the city. If Mr. Smith's principle applied, goods would be dearer in Cheapside than in Bond Street, which is not the case."

though in a less degree. They are a sort of enlarged monopolies, and may frequently, for ages together, and in whole classes of employments, keep up the market price of particular commodities above the natural price, and maintain both the wages of the labour and the profits of the stock employed about them somewhat above their natural rate.

Such enhancements of the market price may last as long as the regulations of police which give occasion to them.

The market price of any particular commodity, though it may continue long above, can seldom continue long below, its natural price. Whatever part of it was paid below the natural rate, the persons whose interest it affected would immediately feel the loss, and would immediately withdraw either so much land, or so much labour, or so much stock, from being employed about it, that the quantity brought to market would soon be no more than sufficient to supply the effectual demand. Its market price, therefore, would soon rise to the natural price. This at least would be the case where there was perfect liberty.

The same statutes of apprenticeship and other corporation laws indeed, which, when a manufacture is in prosperity, enable the workman to raise his wages a good deal above their natural rate, sometimes oblige him, when it decays, to let them down a good deal below it. As in the one case they exclude many people from his employment, so in the other they exclude him from many employments. The effect of such regulations, however, is not near so durable in sinking the workman's wages below, as in raising them above, their natural rate. Their operation in the one way may endure for many centuries, but in the other it can last no longer than the lives of some of the workmen who were bred to the business in the time of its prosperity. When they are gone, the number of those who are afterwards educated to the trade will naturally suit itself to the effectual demand. The police must be as violent as that of Indostan or ancient Egypt⁸⁴ (where

⁸⁴ In *Lectures*, p. 168, the Egyptian practice is attributed to "a law of Sesostris."

every man was bound by a principle of religion to follow the occupation of his father, and was supposed to commit the most horrid sacrilege if he changed it for another), which can in any particular employment, and for several generations together, sink either the wages of labour or the profits of stock below their natural rate.

This is all that I think necessary to be observed at present concerning the deviations, whether occasional or permanent, of the market price of commodities from the natural price.

The natural price itself varies with the natural rate of each of its component parts, of wages, profit, and rent; and in every society this rate varies according to their circumstances, according to their riches or poverty, their advancing, stationary, or declining condition. I shall, in the four following chapters, endeavour to explain, as fully and distinctly as I can, the causes of those different variations.

First, I shall endeavour to explain what are the circumstances which naturally determine the rate of wages, and in what manner those circumstances are affected by the riches or poverty, by the advancing, stationary, or declining state of the society.

Secondly, I shall endeavour to show what are the circumstances which naturally determine the rate of profit, and in what manner too those circumstances are affected by the like variations in the state of the society.

Though pecuniary wages and profit are very different in the different employments of labour and stock; yet a certain proportion seems commonly to take place between both the pecuniary wages in all the different employments of labour, and the pecuniary profits in all the different employments of stock. This proportion, it will appear hereafter, depends partly upon the nature of the different employments, and partly upon the different laws and policy of the society in which they are carried on. But though in many respects dependent upon the laws and policy, this proportion seems to be little affected by the riches or poverty of that society; by its advancing, stationary, or declining condition; but to remain the same or very nearly the same in all those different

states. I shall, in the third place, endeavour to explain all the different circumstances which regulate this proportion.

In the fourth and last place, I shall endeavour to show what are the circumstances which regulate the rent of land, and which either raise or lower the real price of all the different substances which it produces.

Of the Wages of Labour

The produce of labour constitutes the natural recompence or wages of labour.

In that original state of things, which precedes both the appropriation of land and the accumulation of stock, the whole produce of labour belongs to the labourer. He has neither landlord nor master to share with him.

Had this state continued, the wages of labour would have augmented with all those improvements in its productive powers, to which the division of labour gives occasion. All things would gradually have become cheaper.⁸⁵ They would have been produced by a smaller quantity of labour; and as the commodities produced by equal quantities of labour would naturally in this state of things be exchanged for one another, they would have been purchased likewise with the produce of a smaller quantity.

But though all things would have become cheaper in reality, in appearance many things might have become dearer than before, or have been exchanged for a greater quantity of other goods.^{85a} Let us suppose, for example, that in the greater

⁸⁵ The word "cheaper" is defined by the next sentence as "produced by a smaller quantity of labour."

^{85a} It would be less confusing if the sentence ran: "But though all things would have become cheaper in the sense just attributed to the word, yet in the sense in which the words cheaper and dearer are ordinarily used many things might have become dearer than before."

part of employments the productive powers of labour had been improved to tenfold, or that a day's labour could produce ten times the quantity of work which it had done originally; but that in a particular employment they had been improved only to double, or that a day's labour could produce only twice the quantity of work which it had done before. In exchanging the produce of a day's labour in the greater part of employments, for that of a day's labour in this particular one, ten times the original quantity of work in them would purchase only twice the original quantity in it. Any particular quantity in it, therefore, a pound weight, for example, would appear to be five times dearer than before.⁸⁶ In reality,⁸⁷ however, it would be twice as cheap. Though it required five times the quantity of other goods to purchase it, it would require only half the quantity of labour either to purchase or to produce it. The acquisition, therefore, would be twice as easy⁸⁸ as before.

But this original state of things, in which the labourer enjoyed the whole produce of his own labour, could not last beyond the first introduction of the appropriation of land and the accumulation of stock. It was at an end, therefore, long before the most considerable improvements were made in the productive powers of labour, and it would be to no purpose to trace further what might have been its effects upon the recompence or wages of labour.

As soon as land becomes private property, the landlord demands a share of almost all the produce which⁸⁹ the labourer can either raise, or collect from it. His rent makes the first deduction from the produce of the labour which is employed upon land.

It seldom happens that the person who tills the ground has

⁸⁶ *I.e.*, "would in the ordinary sense of the word be five times dearer than before."

⁸⁷ *I.e.*, "in the sense attributed to the word above."

⁸⁸ If the amount of labour necessary for the acquisition of a thing measures its value, "twice as cheap" means simply, twice as easy to acquire.

⁸⁹ Ed. 1 reads "of whatever produce."

wherewithal to maintain himself till he reaps the harvest. His maintenance is generally advanced to him from the stock of a master, the farmer who employs him, and who would have no interest to employ him, unless he was to share in the produce of his labour, or unless his stock was to be replaced to him with a profit. This profit makes a second deduction from the produce of the labour which is employed upon land.

The produce of almost all other labour is liable to the like deduction of profit. In all arts and manufactures the greater part of the workmen stand in need of a master to advance them the materials of their work, and their wages and maintenance till it be compleated.⁹⁰ He shares in the produce of their labour, or in the value which it adds to the materials upon which it is bestowed; and in this share consists his profit.

It sometimes happens, indeed, that a single independent workman has stock sufficient both to purchase the materials of his work, and to maintain himself till it be completed. He is both master and workman, and enjoys the whole produce of his own labour, or the whole value which it adds to the materials upon which it is bestowed. It includes what are usually two distinct revenues, belonging to two distinct persons, the profits of stock, and the wages of labour.

Such cases, however, are not very frequent, and in every part of Europe, twenty workmen serve under a master for one that is independent; and the wages of labour are everywhere understood to be, what they usually are, when the labourer is one person, and the owner of the stock which employs him another.

What are the common wages of labour, depends every where upon the contract usually made between those two parties, whose interests are by no means the same. The workmen desire to get as much, the masters to give as little as possible. The former are disposed to combine in order to raise, the latter in order to lower the wages of labour.

It is not, however, difficult to foresee which of the two

⁹⁰ The provision of tools to work with and buildings to work in is forgotten.

parties must, upon all ordinary occasions, have the advantage in the dispute, and force the other into a compliance with their terms. The masters, being fewer in number, can combine much more easily; and the law, besides, authorises, or at least does not prohibit their combinations,⁹¹ while it prohibits those of the workmen.⁹² We have no acts of parliament against combining to lower the price of work; but many against combining to raise it. In all such disputes the masters can hold out much longer. A landlord, a farmer, a master manufacturer, or merchant, though they did not employ a single workman, could generally live a year or two upon the stocks which they have already acquired. Many workmen could not subsist a week, few could subsist a month, and scarce any a year without employment. In the long-run the workman may be as necessary to his master as his master is to him, but the necessity is not so immediate.

We rarely hear, it has been said, of the combinations of masters, though frequently of those of workmen. But whoever imagines, upon this account, that masters rarely combine, is as ignorant of the world as of the subject. Masters are always and every where in a sort of tacit, but constant and uniform combination, not to raise the wages of labour above their actual rate. To violate this combination is every where a most unpopular action, and a sort of reproach to a master among his neighbours and equals. We seldom, indeed, hear of this combination, because it is the usual, and one may say, the natural state of things which nobody ever hears of. Masters too sometimes enter into particular combinations to sink the wages of labour even below this rate. These are always conducted with the utmost silence and secrecy, till the

⁹¹ Ed. 1 reads, "The masters being fewer in number can not only combine more easily, but the law authorises their combinations, or at least does not prohibit them."

⁹² *E.g.*, 7 Geo. I., stat. 1, c. 13, as to London tailors; 12 Geo. I., c. 34, as to woolcombers and weavers; 12 Geo. I., c. 35, as to brick and tile makers within fifteen miles of London; 22 Geo. II., c. 27, § 12, as to persons employed in the woollen manufacture and many others.

moment of execution, and when the workmen yield, as they sometimes do, without resistance, though severely felt by them, they are never heard of by other people. Such combinations, however, are frequently resisted by a contrary defensive combination of the workmen; who sometimes too, without any provocation of this kind, combine of their own accord to raise the price of their labour. Their usual pretences⁹³ are, sometimes the high price of provisions; sometimes the great profit which their masters make by their work. But whether their combinations be offensive or defensive, they are always abundantly heard of. In order to bring the point to a speedy decision, they have always recourse to the loudest clamour, and sometimes to the most shocking violence and outrage. They are desperate, and act with the folly and extravagance of desperate men, who must either⁹⁴ starve, or frighten their masters into an immediate compliance with their demands. The masters upon these occasions are just as clamorous upon the other side, and never cease to call aloud for the assistance of the civil magistrate, and the rigorous execution of those laws which have been enacted with so much severity against the combinations of servants, labourers, and journeymen. The workmen, accordingly, very seldom derive any advantage from the violence of those tumultuous combinations, which, partly from the interposition of the civil magistrate, partly from the superior steadiness of the masters, partly from the necessity which the greater part of the workmen are under of submitting for the sake of present subsistence, generally end in nothing, but the punishment or ruin of the ring-leaders.

But though in disputes with their workmen, masters must generally have the advantage, there is however a certain rate below which it seems impossible to reduce, for any considerable time, the ordinary wages even of the lowest species of labour.

⁹³ The word is used as elsewhere in Adam Smith without the implication of falsity now attached to it: a pretence is simply something put forward.

⁹⁴ Ed. 1 does not contain "either."

A man must always live by his work, and his wages must at least be sufficient to maintain him. They must even upon most occasions be somewhat more; otherwise it would be impossible for him to bring up a family, and the race of such workmen could not last beyond the first generation. Mr. Cantillon seems, upon this account, to suppose that the lowest species of common labourers must every where earn at least double their own maintenance, in order that one with another they may be enabled to bring up two children; the labour of the wife, on account of her necessary attendance on the children, being supposed no more than sufficient to provide for herself.⁹⁵ But one-half the children born, it is computed, die before the age of manhood.⁹⁶ The poorest labourers, therefore, according to this account, must, one with another, attempt to rear at least four children, in order that two may have an equal chance of living to that age. But the necessary maintenance of four children, it is supposed, may be nearly equal to that of one man. The labour of an able-bodied slave, the same author adds, is computed to be worth double his maintenance; and that of the meanest labourer, he thinks, cannot be worth less than that of an able-bodied slave. Thus far at least seems certain, that, in order to bring up a family, the labour of the husband and wife together must, even in the lowest species of common labour, be able to earn something more than what is precisely necessary for their own maintenance; but in what proportion, whether in that above mentioned, or in any other, I shall not take upon me to determine.⁹⁷

There are certain circumstances, however, which some-

⁹⁵ *Essai sur la nature du commerce en général*, 1755, pp. 42-47. The "seems" is not meaningless, as Cantillon is unusually obscure in the passage referred to. It is not clear whether he intends to include the woman's earnings or not.

⁹⁶ I.e., before completing their seventeenth year, as stated by Dr. Halley, quoted by Cantillon, *Essai*, pp. 42, 43.

⁹⁷ Cantillon himself, p. 44, says: "C'est une matière qui n'admet pas un calcul exact, et dans laquelle la précision n'est pas même fort nécessaire, il suffit qu'on ne s'y éloigne pas beaucoup de la réalité."

times give the labourers an advantage, and enable them to raise their wages considerably above this rate; evidently the lowest which is consistent with common humanity.

When in any country the demand for those who live by wages; labourers, journeymen, servants of every kind, is continually increasing; when every year furnishes employment for a greater number than had been employed the year before, the workmen have no occasion to combine in order to raise their wages. The scarcity of hands occasions a competition among masters, who bid against one another, in order to get workmen,⁹⁸ and thus voluntarily break through the natural combination of masters not to raise wages.

The demand for those who live by wages, it is evident, cannot increase but in proportion to the increase of the funds which are destined for the payment of wages. These funds are of two kinds; first, the revenue which is over and above what is necessary for the maintenance;⁹⁹ and, secondly, the stock which is over and above what is necessary for the employment of their masters.

When the landlord, annuitant, or monied man, has a greater revenue than what he judges sufficient to maintain his own family, he employs either the whole or a part of the surplus in maintaining one or more menial servants.¹⁰⁰ Increase this surplus, and he will naturally increase the number of those servants.

When an independent workman, such as a weaver or shoemaker, has got more stock than what is sufficient to purchase the materials of his own work, and to maintain himself till he can dispose of it, he naturally employs one or more journeymen with the surplus, in order to make a profit by their work.

⁹⁸ Ed. 1 reads "them."

⁹⁹ There is no attempt to define "maintenance" and consequently the division of a man's revenue into what is necessary for his maintenance and what is over and above is left perfectly vague.

¹⁰⁰ It seems to be implied here that keeping a menial servant, even to perform the most necessary offices (*e.g.*, to nurse the infant child of a widower), is not "maintaining" a family.

Increase this surplus, and he will naturally increase the number of his journeymen.

The demand for those who live by wages, therefore, necessarily increases with the increase of the revenue and stock of every country, and cannot possibly increase without it. The increase of revenue and stock is the increase of national wealth.¹⁰¹ The demand for those who live by wages, therefore, naturally increases with the increase of national wealth, and cannot possibly increase without it.

It is not the actual greatness of national wealth, but its continual increase, which occasions a rise in the wages¹⁰² of labour. It is not, accordingly, in the richest countries, but in the most thriving, or in those which are growing rich the fastest, that the wages of labour are highest. England is certainly, in the present times, a much richer¹⁰³ country than any part of North America. The wages of labour, however, are much higher in North America than in any part of England. In the province of New York, common labourers earn¹⁰⁴ three shillings and sixpence currency, equal to two shillings sterling, a day; ship carpenters, ten shillings and sixpence currency, with a pint of rum worth sixpence sterling, equal in all to six shillings and sixpence sterling; house carpenters and bricklayers, eight shillings currency, equal to four shillings and

¹⁰¹ Above, in the Introduction and Plan of the Work, the wealth of a nation was treated as synonymous with its annual produce, and there has been hitherto no suggestion that its stock must be considered.

¹⁰² Apparently this is a slip for "occasions high wages." At any rate the next sentences require this assertion and not that actually made.

¹⁰³ The method of calculating wealth by the amount of annual produce per head adopted above, in the Introduction and Plan of the Work, is departed from here and below, and frequently in later passages, in favour of the calculation by amount of capital wealth.

¹⁰⁴ This was written in 1773, before the commencement of the late disturbances. Ed. 1 does not contain this note; eds. 2 and 3 read "present disturbances."

sixpence sterling; journeymen taylors, five shillings currency, equal to about two shillings and ten pence sterling. These prices are all above the London price; and wages are said to be as high in the other colonies as in New York. The price of provisions is every where in North America much lower than in England. A dearth has never been known there. In the worst seasons, they have always had a sufficiency for themselves, though less for exportation. If the money price of labour, therefore, be higher than it is any where in the mother country, its real price, the real command of the necessaries and conveniences of life which it conveys to the labourer, must be higher in a still greater proportion.

But though North America is not yet so rich as England, it is much more thriving, and advancing with much greater rapidity to the further acquisition of riches. The most decisive mark of the prosperity of any country is the increase of the number of its inhabitants. In Great Britain, and most other European countries, they are not supposed to double in less than five hundred years. In the British colonies in North America, it has been found, that they double in twenty or five-and-twenty years.¹⁰⁵ Nor in the present times is this increase principally owing to the continual importation of new inhabitants, but to the great multiplication of the species. Those who live to old age, it is said, frequently see there

¹⁰⁵ Petty, *Political Arithmetic*, 1699, p. 18, made the period for England 360 years. Gregory King, quoted by Davenant, *Works*, ed. Whitworth, 1771, vol. ii., p. 176, makes it 435 years in the past and probably 600 in the future. In 1703 the population of Virginia was 60,000, in 1755 it was 300,000, and in 1765 it was 500,000, "by which they appear to have doubled their numbers every twenty years as high as may be."—*The Present State of Great Britain and North America with regard to Agriculture, Population, Trade and Manufactures*, 1767, p. 22, note. "The original number of persons who in 1643 had settled in New England was 21,200. Ever since, it is reckoned that more have left them than have gone to them. In the year 1760 they were increased to half a million. They have therefore all along doubled their own number in twenty-five years."—Richard Price, *Observations on Reversionary Payments*, etc., 1771, pp. 204, 205. The statement as to America is repeated below.

from fifty to a hundred, and sometimes many more, descendants from their own body. Labour is there so well rewarded that a numerous family of children, instead of being a burthen is a source of opulence and prosperity to the parents. The labour of each child, before it can leave their house, is computed to be worth a hundred pounds clear gain to them. A young widow with four or five young children, who, among the middling or inferior ranks of people in Europe, would have so little chance for a second husband, is there frequently courted as a sort of fortune. The value of children is the greatest of all encouragements to marriage. We cannot, therefore, wonder that the people in North America should generally marry very young. Notwithstanding the great increase occasioned by such early marriages, there is a continual complaint of the scarcity of hands in North America. The demand for labourers, the funds destined for maintaining them, increase, it seems, still faster than they can find labourers to employ.

Though the wealth of a country should be very great, yet if it has been long stationary, we must not expect to find the wages of labour very high in it. The funds destined for the payment of wages, the revenue and stock of its inhabitants, may be of the greatest extent; but if they have continued for several centuries of the same, or very nearly of the same extent, the number of labourers employed every year could easily supply, and even more than supply, the number wanted the following year. There could seldom be any scarcity of hands, nor could the masters be obliged to bid against one another in order to get them. The hands, on the contrary, would, in this case, naturally multiply beyond their employment. There would be a constant scarcity of employment, and the labourers would be obliged to bid against one another in order to get it. If in such a country the wages of labour had ever been more than sufficient to maintain the labourer, and to enable him to bring up a family, the competition of the labourers and the interest of the masters would soon reduce them to this lowest rate which is consistent with common humanity. China has been long one of the richest,

that is, one of the most fertile, best cultivated, most industrious, and most populous countries in the world.¹⁰⁶ It seems, however, to have been long stationary. Marco Polo, who visited it more than five hundred years ago,¹⁰⁷ describes its cultivation, industry, and populousness, almost in the same terms in which they are described by travellers in the present times. It had perhaps, even long before his time, acquired that full complement of riches which the nature of its laws and institutions permits it to acquire. The accounts of all travellers, inconsistent in many other respects, agree in the low wages of labour, and in the difficulty which a labourer finds in bringing up a family in China. If by digging the ground a whole day he can get what will purchase a small quantity of rice in the evening, he is contented. The condition of artificers is, if possible, still worse. Instead of waiting indolently in their workhouses, for the calls of their customers, as in Europe, they are continually running about the streets with the tools of their respective trades, offering their service, and as it were beginning employment.¹⁰⁸ The poverty of the lower ranks of people in China far surpasses that of the most beggarly nations in Europe. In the neighbourhood of Canton many hundred, it is commonly said, many thousand families have no habitation on the land, but live constantly in little fishing boats upon the rivers and canals. The subsistence which they find there is so scanty that they are eager to fish up the nastiest garbage thrown overboard from any European ship. Any carrion, the carcase of a dead dog or cat, for example, though half putrid and stinking, is as welcome to them as the most wholesome food to the people of other countries. Marriage is encouraged in China, not by the profitableness of children, but by the liberty of destroying them. In all great towns several are every night exposed in the street,

¹⁰⁶ Here we have a third method of calculating the riches or wealth of a country, namely by the amount of produce per acre.

¹⁰⁷ The date of his arrival was 1275.

¹⁰⁸ "Les artisans courent les villes du matin au soir pour chercher pratique," Quesnay, *Éphémérides du citoyen*, Mars, 1767; *Œuvres*, ed. Oncken, 1888, p. 581.

or drowned like puppies in the water. The performance of this horrid office is even said to be the avowed business by which some people earn their subsistence.¹⁰⁹

China, however, though it may perhaps stand still, does not seem to go backwards. Its towns are no-where deserted by their inhabitants. The lands which had once been cultivated are no-where neglected. The same or very nearly the same annual labour must therefore continue to be performed, and the funds destined for maintaining it must not, consequently, be sensibly diminished. The lowest class of labourers, therefore, notwithstanding their scanty subsistence, must some way or another make shift to continue their race so far as to keep up their usual numbers.

But it would be otherwise in a country where the funds destined for the maintenance of labour were sensibly decay-

¹⁰⁹ "Cependant quelque sobre et quelque industrieux que soit le peuple de la Chine, le grand nombre de ses habitants y cause beaucoup de misère. On en voit de si pauvres, que ne pouvant fournir à leurs enfants les aliments nécessaires, ils les exposent dans les rues, surtout lorsque les mères tombent malades, ou qu'elles manquent de lait pour les nourrir. Ces petits innocents sont condamnés en quelque manière à la mort presque au même instant qu'ils ont commencé de vivre: cela frappe dans les grandes villes, comme Peking, Canton; car dans les autres villes à peine s'en aperçoit-on.

"C'est ce qui a porté les missionnaires à entretenir dans ces endroits très peuplés, un nombre de catéchistes, qui en partageant entre eux tous les quartiers, et les parcourent tous les matins, pour procurer la grâce du baptême à une multitude d'enfants moribonds.

"Dans la même vue on a quelquefois gagné des sages-femmes infidèles afin qu'elles permissent à des filles chrétiennes de se suivre dans les différentes maisons où elles sont appelées: car il arrive quelquefois que les Chinois se trouvant hors d'état de nourrir une nombreuse famille, engagent ces sages-femmes à étouffer dans un bassin plein d'eau les petits filles aussitôt qu'elles sont nées; ces chrétiennes ont soin de les baptiser, et par ce moyen ces tristes victimes de l'indigence de leurs parents trouvent la vie éternelle dans ces mêmes eaux, qui leur ravissent une vie courte et périssable."—Du Halde, *Description géographique, historique, chronologique, politique et physique de l'empire de la Chine et de la Tartarie chinoise*, 1735, tom. ii., pp. 73, 74. The statement in the text above that drowning babies is a special business is possibly founded on a mistranslation of "sages-femmes."

ing. Every year the demand for servants and labourers would, in all the different classes of employments, be less than it had been the year before. Many who had been bred in the superior classes, not being able to find employment in their own business, would be glad to seek it in the lowest. The lowest class being not only overstocked with its own workmen, but with the overflowings of all the other classes, the competition for employment would be so great in it, as to reduce the wages of labour to the most miserable and scanty subsistence of the labourer. Many would not be able to find employment even upon these hard terms, but would either starve, or be driven to seek a subsistence either by begging, or by the perpetration perhaps of the greatest enormities. Want, famine, and mortality would immediately prevail in that class, and from thence extend themselves to all the superior classes, till the number of inhabitants in the country was reduced to what could easily be maintained by the revenue and stock which remained in it, and which had escaped either the tyranny or calamity which had destroyed the rest. This perhaps is nearly the present state of Bengal, and of some other of the English settlements in the East Indies. In a fertile country which had before been much depopulated, where subsistence, consequently, should not be very difficult, and where, notwithstanding, three or four hundred thousand people die of hunger in one year, we may be assured that the funds destined for the maintenance of the labouring poor are fast decaying. The difference between the genius of the British constitution which protects and governs North America, and that of the mercantile company which oppresses and dominates in the East Indies, cannot perhaps be better illustrated than by the different state of those countries.

The liberal reward of labour, therefore, as it is the necessary effect, so it is the natural symptom of increasing national wealth. The scanty maintenance of the labouring poor, on the other hand, is the natural symptom that things are at a stand, and their starving condition that they are going fast backwards.

In Great Britain the wages of labour seem, in the present

times, to be evidently more than what is precisely necessary to enable the labourer to bring up a family. In order to satisfy ourselves upon this point it will not be necessary to enter into any tedious or doubtful calculation of what may be the lowest sum upon which it is possible to do this. There are many plain symptoms that the wages of labour are no-where in this country regulated by this lowest rate which is consistent with common humanity.

First, in almost every part of Great Britain there is a distinction, even in the lowest species of labour, between summer and winter wages. Summer wages are always highest. But on account of the extraordinary expence of fuel, the maintenance of a family is most expensive in winter. Wages, therefore, being highest when this expence is lowest, it seems evident that they are not regulated by what is necessary for this expence; but by the quantity and supposed value of the work. A labourer, it may be said indeed, ought to save part of his summer wages in order to defray his winter expence; and that through the whole year they do not exceed what is necessary to maintain his family through the whole year. A slave, however, or one absolutely dependent on us for immediate subsistence, would not be treated in this manner. His daily subsistence would be proportioned to his daily necessities.

Secondly, the wages of labour do not in Great Britain fluctuate with the price of provisions. These vary everywhere from year to year, frequently from month to month. But in many places the money price of labour remains uniformly the same sometimes for half a century together. If in these places, therefore, the labouring poor can maintain their families in dear years, they must be at their ease in times of moderate plenty, and in affluence in those of extraordinary cheapness. The high price of provisions during these ten years past has not in many parts of the kingdom been accompanied with any sensible rise in the money price of labour. It has, indeed, in some; owing probably more to the increase of the demand for labour than to that of the price of provisions.

Thirdly, as the price of provisions varies more from year to year than the wages of labour, so, on the other hand, the wages of labour vary more from place to place than the price of provisions. The prices of bread and butcher's meat are generally the same or very nearly the same through the greater part of the united kingdom. These and most other things which are sold by retail, the way in which the labouring poor buy all things, are generally fully as cheap or cheaper in great towns than in the remoter parts of the country, for reasons which I shall have occasion to explain hereafter. But the wages of labour in a great town and its neighbourhood are frequently a fourth or a fifth part, twenty or five-and-twenty per cent. higher than at a few miles distance. Eighteen pence a day may be reckoned the common price of labour in London and its neighbourhood. At a few miles distance it falls to fourteen and fifteen pence. Ten pence may be reckoned its price in Edinburgh and its neighbourhood. At a few miles distance it falls to eight pence, the usual price of common labour through the greater part of the low country of Scotland, where it varies a good deal less than in England.¹¹⁰ Such a difference of prices, which it seems is not always sufficient to transport a man from one parish to another, would necessarily occasion so great a transportation of the most bulky commodities, not only from one parish to another, but from one end of the kingdom, almost from one end of the world to the other, as would soon reduce them more nearly to a level. After all that has been said of the levity and inconstancy of human nature, it appears evidently from experience that a man is of all sorts of luggage the most difficult to be transported. If the labouring poor, therefore, can maintain their families in those parts of the kingdom where the price of labour is lowest, they must be in affluence where it is highest.

Fourthly, the variations in the price of labour not only do not correspond either in place or time with those in the price of provisions, but they are frequently quite opposite.

¹¹⁰ The difference between England and Scotland in this respect is attributed to the English law of settlement.

Grain, the food of the common people, is dearer in Scotland than in England, whence Scotland receives almost every year very large supplies. But English corn must be sold dearer in Scotland, the country to which it is brought, than in England, the country from which it comes; and in proportion to its quality it cannot be sold dearer in Scotland than the Scotch corn that comes to the same market in competition with it. The quality of grain depends chiefly upon the quantity of flour or meal which it yields at the mill, and in this respect English grain is so much superior to the Scotch, that, though often dearer in appearance, or in proportion to the measure of its bulk, it is generally cheaper in reality, or in proportion to its quality, or even to the measure of its weight. The price of labour, on the contrary, is dearer in England than in Scotland. If the labouring poor, therefore, can maintain their families in the one part of the united kingdom, they must be in affluence in the other. Oatmeal indeed supplies the common people in Scotland with the greatest and the best part of their food, which is in general much inferior to that of their neighbours of the same rank in England. This difference, however, in the mode of their subsistence is not the cause, but the effect, of the difference in their wages; though, by a strange misapprehension, I have frequently heard it represented as the cause. It is not because one man keeps a coach while his neighbour walks a-foot, that the one is rich and the other poor; but because the one is rich he keeps a coach, and because the other is poor he walks a-foot.

During the course of the last century, taking one year with another, grain was dearer in both parts of the united kingdom than during that of the present. This is a matter of fact which cannot now admit of any reasonable doubt; and the proof of it is, if possible, still more decisive with regard to Scotland than with regard to England. It is in Scotland supported by the evidence of the public fiars, annual valuations made upon oath, according to the actual state of the markets, of all the different sorts of grain in every different county of Scotland. If such direct proof could require any collateral evidence to confirm it, I would observe that this has likewise been the

case in France, and probably in most other parts of Europe. With regard to France there is the clearest proof. But though it is certain that in both parts of the united kingdom grain was somewhat dearer in the last century than in the present, it is equally certain that labour was much cheaper. If the labouring poor, therefore, could bring up their families then, they must be much more at their ease now. In the last century, the most usual day-wages of common labour through the greater part of Scotland were sixpence in summer and five-pence in winter. Three shillings a week, the same price very nearly, still continues to be paid in some parts of the Highlands and Western Islands. Through the greater part of the low country the most usual wages of common labour are now eight-pence a day; ten-pence, sometimes a shilling about Edinburgh, in the counties which border upon England, probably on account of that neighbourhood, and in a few other places where there has lately been a considerable rise in the demand for labour, about Glasgow, Carron, Ayr-shire, &c. In England the improvements of agriculture, manufactures and commerce began much earlier than in Scotland. The demand for labour, and consequently its price, must necessarily have increased with those improvements. In the last century, accordingly, as well as in the present, the wages of labour were higher in England than in Scotland. They have risen too considerably since that time, though, on account of the greater variety of wages paid there in different places, it is more difficult to ascertain how much. In 1614, the pay of a foot soldier was the same as in the present times, eight pence a day.¹¹¹ When it was first established it would naturally be regulated by the usual wages of common labourers, the rank of people from which foot soldiers are commonly drawn. Lord Chief Justice Hales,¹¹² who wrote in the time of Charles II. computes the necessary expence of a labourer's family, consisting of six persons, the father and mother, two children able to do something, and two not able, at ten shillings a week,

¹¹¹ Hume, *History*, ed. of 1773, vol. vi., p. 178, quoting Rymer's *Foedera*, tom. xvi., p. 717. This was for service in Germany.

¹¹² Sir Matthew Hale.

or twenty-six pounds a year. If they cannot earn this by their labour, they must make it up, he supposes, either by begging or stealing. He appears to have enquired very carefully into this subject.¹¹³ In 1688, Mr. Gregory King, whose skill in political arithmetic is so much extolled by Doctor Davenant,¹¹⁴ computed the ordinary income of labourers and out-servants to be fifteen pounds a year to a family, which he supposed to consist, one with another, of three and a half persons.¹¹⁵ His calculation, therefore, though different in appearance, corresponds very nearly at bottom with that of judge Hales. Both suppose the weekly expence of such families to be about twenty pence a head. Both the pecuniary income and expence of such families have increased considerably since that time through the greater part of the kingdom; in some places more, and in some less; though perhaps scarce any where so much as some exaggerated accounts of the present wages of labour have lately represented them to the public. The price of labour, it must be observed, cannot be ascertained very accurately any where, different prices being often paid at the same place and for the same sort of labour, not only according to the different abilities of the workmen, but according to the easiness or hardness of the masters. Where wages are not regulated by law, all that we can pretend to determine is what are the most usual; and experience seems to show that law can never regulate them properly, though it has often pretended to do so.

The real recompence of labour, the real quantity of the necessaries and conveniencies of life which it can procure to the labourer, has, during the course of the present century, increased perhaps in a still greater proportion than its money

¹¹³ See his scheme for the maintenance of the Poor, in Burn's History of the Poor-laws. This note appears first in ed. 2. Hale's *Discourse Touching Provision for the Poor* was printed in 1683. It contains no internal evidence of the careful inquiry attributed to it above.

¹¹⁴ Davenant, *Essay upon the probable Methods of Making a People Gainers in the Balance of Trade*, 1699, pp. 15, 16; in *Works*, ed. Whitworth, vol. ii., p. 175.

price. Not only grain has become somewhat cheaper, but many other things, from which the industrious poor derive an agreeable and wholesome variety of food, have become a great deal cheaper. Potatoes, for example, do not at present, through the greater part of the kingdom, cost half the price which they used to do thirty or forty years ago. The same thing may be said of turnips, carrots, cabbages; things which were formerly never raised but by the spade, but which are now commonly raised by the plough. All sort of garden stuff too has become cheaper. The greater part of the apples and even of the onions consumed in Great Britain were in the last century imported from Flanders. The great improvements in the coarser manufactures of both linen and woollen cloth furnish the labourers with cheaper and better cloathing; and those in the manufactures of the coarser metals, with cheaper and better instruments of trade, as well as with many agreeable and convenient pieces of household furniture. Soap, salt, candles, leather, and fermented liquors, have, indeed, become a good deal dearer; chiefly from the taxes which have been laid upon them. The quantity of these, however, which the labouring poor are under any necessity of consuming, is so very small, that the increase in their price does not compensate the diminution in that of so many other things. The common complaint that luxury extends itself even to the lowest ranks of the people, and that the labouring poor will not now be contented with the same food, cloathing and lodging which satisfied them in former times, may convince us that it is not the money price of labour only, but its real recompence, which has augmented.

Is this improvement in the circumstances of the lower ranks of the people to be regarded as an advantage or as an inconvenience to the society? ¹¹⁶ The answer seems at first sight

¹¹⁶ Berkeley, *Querist*, 5th ed., 1752, qu. 2, asks "whether a people can be called poor where the common sort are well fed, clothed and lodged." Hume, "On Commerce," says: "The greatness of a state and the happiness of its subjects, however independent they may be supposed in some respects, are commonly allowed to be inseparable with regard to commerce."—*Political Discourses*, 1752, p. 4.

abundantly plain. Servants, labourers and workmen of different kinds, make up the far greater part of every great political society. But what improves the circumstances of the greater part can never be regarded as an inconveniency to the whole. No society can surely be flourishing and happy, of which the far greater part of the members are poor and miserable. It is but equity, besides, that they who feed, cloath and lodge the whole body of the people, should have such a share of the produce of their own labour as to be themselves tolerably well fed, clothed and lodged.

Poverty, though it no doubt discourages, does not always prevent marriage. It seems even to be favourable to generation. A half-starved Highland woman frequently bears more than twenty children, while a pampered fine lady is often incapable of bearing any, and is generally exhausted by two or three. Barrenness, so frequent among women of fashion, is very rare among those of inferior station. Luxury in the fair sex, while it inflames perhaps the passion for enjoyment, seems always to weaken, and frequently to destroy altogether, the powers of generation.

But poverty, though it does not prevent the generation, is extremely unfavourable to the rearing of children. The tender plant is produced, but in so cold a soil, and so severe a climate, soon withers and dies. It is not uncommon, I have been frequently told, in the Highlands of Scotland for a mother who has borne twenty children not to have two alive. Several officers of great experience have assured me, that so far from recruiting their regiment, they have never been able to supply it with drums and fifes from all the soldiers' children that were born in it. A greater number of fine children, however, is seldom seen any where than about a barrack of soldiers. Very few of them, it seems, arrive at the age of thirteen or fourteen. In some places one half the children born die before they are four years of age; in many places before they are seven; and in almost all places before they are nine or ten. This great mortality, however, will every where be found chiefly among the children of the common people, who cannot afford to tend them with the same care as those of better station. Though their marriages are generally more

fruitful than those of people of fashion, a smaller proportion of their children arrive at maturity. In foundling hospitals, and among the children brought up by parish charities, the mortality is still greater than among those of the common people.

Every species of animals naturally multiplies in proportion to the means of their subsistence, and no species can ever multiply beyond it. But in civilized society it is only among the inferior ranks of people that the scantiness of subsistence can set limits to the further multiplication of the human species; and it can do so in no other way than by destroying a great part of the children which their fruitful marriages produce.

The liberal reward of labour, by enabling them to provide better for their children, and consequently to bring up a greater number, naturally tends to widen and extend those limits. It deserves to be remarked too, that it necessarily does this as nearly as possible in the proportion which the demand for labour requires.¹¹⁷ If this demand is continually increasing, the reward of labour must necessarily encourage in such a manner the marriage and multiplication of labourers, as may enable them to supply that continually increasing demand by a continually increasing population. If the reward¹¹⁸ should at any time be less than what was requisite for this purpose, the deficiency of hands would soon raise it; and if it should at any time be more, their excessive multiplication would soon lower it to this necessary rate. The market would be so much understocked with labour in the one case, and so much overstocked in the other, as would soon force back its price to that proper rate which the circumstances of the society required. It is in this manner that the demand for men, like that for any other commodity, necessarily regulates the production of men; quickens it when it goes on too slowly, and stops it when it advances too fast. It is this demand which regulates and de-

¹¹⁷ Cantillon, *Essai*, pt. i., ch. ix., title, "Le nombre de laboureurs, artisans et autres qui travaillent dans un état se proportionne naturellement au besoin qu'on en a."

¹¹⁸ Ed. 1 reads "If it."

termines the state of propagation in all the different countries of the world, in North America, in Europe, and in China; which renders it rapidly progressive in the first, slow and gradual in the second, and altogether stationary in the last.¹¹⁹

The wear and tear¹²⁰ of a slave, it has been said, is at the expence of his master; but that of a free servant is at his own expence. The wear and tear of the latter, however, is, in reality, as much at the expence of his master as that of the former. The wages paid to journeymen and servants of every kind must be such as may enable them, one with another, to continue the race of journeymen and servants, according as the increasing, diminishing, or stationary demand of the society may happen to require. But though the wear and tear of a free servant be equally at the expence of his master, it generally costs him much less than that of a slave. The fund destined for replacing or repairing, if I may say so, the wear and tear of the slave, is commonly managed by a negligent master or careless overseer. That destined for performing the same office with regard to the free man, is managed by the free man himself. The disorders which generally prevail in the œconomy of the rich, naturally introduce themselves into the management of the former: The strict frugality and parsimonious attention of the poor as naturally establish themselves in that of the latter. Under such different management, the same purpose must require very different degrees of expence to execute it. It appears, accordingly, from the experience of all ages and nations, I believe, that the work done by freemen comes cheaper in the end than that performed by slaves. It is found to do so even at Boston, New York, and Philadelphia, where the wages of common labour are so very high.

The liberal reward of labour, therefore, as it is the effect

¹¹⁹ Berkeley, *Querist*, qu. 62, asks "whether a country inhabited by people well fed, clothed and lodged would not become every day more populous? And whether a numerous stock of people in such circumstances would not constitute a flourishing nation?"

¹²⁰ Ed. 1 reads "tear and wear" here and in the three other cases where the phrase is used in this paragraph.

of increasing wealth, so it is the cause of increasing population. To complain of it, is to lament over the necessary effect and cause of the greatest public prosperity.

It deserves to be remarked, perhaps, that it is in the progressive state, while the society is advancing to the further acquisition, rather than when it has acquired its full complement of riches, that the condition of the labouring poor, of the great body of the people, seems to be the happiest and the most comfortable. It is hard in the stationary, and miserable in the declining state. The progressive state is in reality the cheerful and the hearty state to all the different orders of the society. The stationary is dull; the declining melancholy.

The liberal reward of labour, as it encourages the propagation, so it increases the industry of the common people. The wages of labour are the encouragement of industry, which, like every other human quality, improves in proportion to the encouragement it receives. A plentiful subsistence increases the bodily strength of the labourer, and the comfortable hope of bettering his condition, and of ending his days perhaps in ease and plenty, animates him to exert that strength to the utmost. Where wages are high, accordingly, we shall always find the workmen more active, diligent, and expeditious, than where they are low; in England, for example, than in Scotland; in the neighbourhood of great towns, than in remote country places. Some workmen, indeed, when they can earn in four days what will maintain them through the week, will be idle the other three. This, however, is by no means the case with the greater part.¹²¹ Workmen, on the contrary, when they are liberally paid by the piece, are very apt to over-work themselves, and to ruin their health and constitution in a few years. A carpenter in London, and in some other places, is not supposed to last in his utmost vigour above eight years. Something of the same kind happens in many other trades, in which the workmen are paid by the piece; as they generally are in manufactures, and even in country labour, wherever wages are higher than ordinary. Almost

¹²¹ This is a more favourable view than that taken in *Lectures*, p. 257.

every class of artificers is subject to some peculiar infirmity occasioned by excessive application to their peculiar species of work. Ramuzzini, an eminent Italian physician, has written a particular book concerning such diseases.¹²² We do not reckon our soldiers the most industrious set of people among us. Yet when soldiers have been employed in some particular sorts of work, and liberally paid by the piece, their officers have frequently been obliged to stipulate with the undertaker, that they should not be allowed to earn above a certain sum every day, according to the rate at which they were paid. Till this stipulation was made, mutual emulation and the desire of greater gain, frequently prompted them to over-work themselves, and to hurt their health by excessive labour. Excessive application during four days of the week, is frequently the real cause of the idleness of the other three, so much and so loudly complained of. Great labour, either of mind or body, continued for several days together, is in most men naturally followed by a great desire of relaxation, which, if not restrained by force or by some strong necessity, is almost irresistible. It is the call of nature, which requires to be relieved by some indulgence, sometimes of ease only, but sometimes too of dissipation and diversion. If it is not complied with, the consequences are often dangerous, and sometimes fatal, and such as almost always, sooner or later, bring on the peculiar infirmity of the trade. If masters would always listen to the dictates of reason and humanity, they have frequently occasion rather to moderate, than to animate the application of many of their workmen. It will be found, I believe, in every sort of trade, that the man who works so moderately, as to be able to work constantly, not only preserves his health the longest, but, in the course of the year, executes the greatest quantity of work.

In cheap years, it is pretended, workmen are generally more idle, and in dear ones more industrious than ordinary. A plentiful subsistence therefore, it has been concluded, relaxes, and a scanty one quickens their industry. That a little more plenty

¹²² *De morbis artificum diatriba*, 1700, translated into English (*A Treatise on the Diseases of Tradesmen*) by R. James, 1746.

than ordinary may render some workmen idle, cannot well be doubted; but that it should have this effect upon the greater part, or that men in general should work better when they are ill fed than when they are well fed, when they are disheartened than when they are in good spirits, when they are frequently sick than when they are generally in good health, seems not very probable. Years of dearth, it is to be observed, are generally among the common people years of sickness and mortality, which cannot fail to diminish the produce of their industry.

In years of plenty, servants frequently leave their masters, and trust their subsistence to what they can make by their own industry. But the same cheapness of provisions, by increasing the fund which is destined for the maintenance of servants, encourages masters, farmers especially, to employ a greater number. Farmers upon such occasions expect more profit from their corn by maintaining a few more labouring servants, than by selling it at a low price in the market. The demand for servants increases, while the number of those who offer to supply that demand diminishes. The price of labour, therefore, frequently rises in cheap years.

In years of scarcity, the difficulty and uncertainty of subsistence make all such people eager to return to service. But the high price of provisions, by diminishing the funds destined for the maintenance of servants, disposes masters rather to diminish than to increase the number of those they have. In dear years too, poor independent workmen frequently consume the little stocks with which they had used to supply themselves with the materials of their work, and are obliged to become journeymen for subsistence. More people want employment than can easily get it; many are willing to take it upon lower terms than ordinary, and the wages of both servants and journeymen frequently sink in dear years.

Masters of all sorts, therefore, frequently make better bargains with their servants in dear than in cheap years, and find them more humble and dependent in the former than in the latter. They naturally, therefore, commend the former as more favourable to industry. Landlords and farmers, besides, two of the largest classes of masters, have another reason for

being pleased with dear years. The rents of the one and the profits of the other depend very much upon the price of provisions. Nothing can be more absurd, however, than to imagine that men in general should work less when they work for themselves, than when they work for other people. A poor independent workman will generally be more industrious than even a journeyman who works by the piece. The one enjoys the whole produce of his own industry; the other shares it with his master. The one, in his separate independent state, is less liable to the temptations of bad company, which in large manufactories so frequently ruin the morals of the other. The superiority of the independent workman over those servants who are hired by the month or by the year, and whose wages and maintenance are the same whether they do much or do little, is likely to be still greater. Cheap years tend to increase the proportion of independent workmen to journeymen and servants of all kinds, and dear years to diminish it.

A French author of great knowledge and ingenuity, Mr. Messance, receiver of the *tailles*¹²³ in the election of St. Etienne, endeavours to show that the poor do more work in cheap than in dear years, by comparing the quantity and value of the goods made upon those different occasions in three different manufactures; one of coarse woollens carried on at Elbeuf; one of linen, and another of silk, both which extend through the whole generality of Rouen.¹²⁴ It appears from his account, which is copied from the registers of the public offices, that the quantity and value of the goods made in all those three manufactures has generally been greater in cheap than in dear years; and that it has always been greatest in the cheapest, and least in the dearest years. All the three seem to be stationary manufactures, or which, though their

¹²³ Misprinted "taillies" in eds. 3-5.

¹²⁴ *Recherches sur la population des généralités d'Auvergne, de Lyon, de Rouen, et de quelques provinces et villes du royaume, avec des réflexions sur la valeur du bled tant en France qu'en Angleterre, depuis 1674 jusqu'en 1764*, par M. Messance, receveur des *tailles* de l'élection de Saint-Etienne, 1766, pp. 287-292, 305-308.

produce may vary somewhat from year to year, are upon the whole neither going backwards nor forwards.

The manufacture of linen in Scotland, and that of coarse woollens in the west riding of Yorkshire, are growing manufactures, of which the produce is generally, though with some variations, increasing both in quantity and value. Upon examining, however, the accounts which have been published of their annual produce, I have not been able to observe that its variations have had any sensible connection with the dearth or cheapness of the seasons. In 1740, a year of great scarcity, both manufactures, indeed, appear to have declined very considerably. But in 1756, another year of great scarcity, the Scotch manufacture made more than ordinary advances. The Yorkshire manufacture, indeed, declined, and its produce did not rise to what it had been in 1755 till 1766, after the repeal of the American stamp act. In that and the following year it greatly exceeded what it had ever been before, and it has continued to advance¹²⁵ ever since.

The produce of all great manufactures for distant sale must necessarily depend, not so much upon the dearth or cheapness of the seasons in the countries where they are carried on, as upon the circumstances which affect the demand in the countries where they are consumed; upon peace or war, upon the prosperity or declension of other rival manufactures, and upon the good or bad humour of their principal customers. A great part of the extraordinary work, besides, which is probably done in cheap years, never enters the public registers of manufactures. The men servants who leave their masters become independent labourers. The women return to their parents, and commonly spin in order to make cloaths for themselves and their families. Even the independent workmen do not always work for public sale, but are employed by some of their neighbours in manufactures for family use. The produce of their labour, therefore, frequently makes no figure in those public registers of which the records are sometimes published with so much parade, and from which our merchants and manufactures would often vainly pretend to

¹²⁵ Ed. 1 reads "continued to do so."

announce the prosperity or declension of the greatest empires.

Though the variations in the price of labour, not only do not always correspond with those in the price of provisions, but are frequently quite opposite, we must not, upon this account, imagine that the price of provisions has no influence upon that of labour. The money price of labour is necessarily regulated by two circumstances; the demand for labour, and the price of the necessaries and conveniencies of life. The demand for labour, according as it happens to be increasing, stationary, or declining, or to require an increasing, stationary, or declining population, determines the quantity of the necessaries and conveniencies of life which must be given to the labourer; and the money price of labour is determined by what is requisite for purchasing this quantity. Though the money price of labour, therefore, is sometimes high where the price of provisions is low, it would be still higher, the demand continuing the same, if the price of provisions was high.

It is because the demand for labour increases in years of sudden and extraordinary plenty, and diminishes in those of sudden and extraordinary scarcity, that the money price of labour sometimes rises in the one, and sinks in the other.

In a year of sudden and extraordinary plenty, there are funds in the hands of many of the employers of industry, sufficient to maintain and employ a greater number of industrious people than had been employed the year before; and this extraordinary number cannot always be had. Those masters, therefore, who want more workmen, bid against one another, in order to get them, which sometimes raises both the real and the money price of their labour.

The contrary of this happens in a year of sudden and extraordinary scarcity. The funds destined for employing industry are less than they had been the year before. A considerable number of people are thrown out of employment, who bid against one another, in order to get it, which sometimes lowers both the real and the money price of labour. In 1740, a year of extraordinary scarcity, many people were willing to work for bare subsistence. In the succeeding years of plenty, it was more difficult to get labourers and servants.

The scarcity of a dear year, by diminishing the demand for labour, tends to lower its price, as the high price of provisions tends to raise it. The plenty of a cheap year, on the contrary, by increasing the demand, tends to raise the price of labour, as the cheapness of provisions tends to lower it. In the ordinary variations of the price of provisions, those two opposite causes seem to counterbalance one another; which is probably in part the reason why the wages of labour are every-where so much more steady and permanent than the price of provisions.

The increase in the wages of labour necessarily increases the price of many commodities, by increasing that part of it which resolves itself into wages, and so far tends to diminish their consumption both at home and abroad. The same cause, however, which raises the wages of labour, the increase of stock, tends to increase its productive powers, and to make a smaller quantity of labour produce a greater quantity of work. The owner of the stock which employs a great number of labourers, necessarily endeavours, for his own advantage, to make such a proper division and distribution of employment, that they may be enabled to produce the greatest quantity of work possible. For the same reason, he endeavours to supply them with the best machinery which either he or they can think of. What takes place among the labourers in a particular workhouse, takes place, for the same reason, among those of a great society. The greater their number, the more they naturally divide themselves into different classes and subdivisions of employment. More heads are occupied in inventing the most proper machinery for executing the work of each, and it is, therefore, more likely to be invented. There are many commodities, therefore, which, in consequence of these improvements, come to be produced by so much less labour than before, that the increase of its price is more than compensated by the diminution of its quantity.¹²⁶

¹²⁶ Ed. 1 reads "that the increase of its price does not compensate the diminution of its quantity." The meaning is that the increase in the amount paid for a given quantity of labour is more than counterbalanced by the diminution in the quantity required.

G. W. F. Hegel

PHILOSOPHICAL HISTORY

G. W. F. Hegel

[1770-1831]

Perhaps the most abstruse of the Teutonic philosophers, G. W. F. Hegel built so huge an edifice to contain the whole of human knowledge that only with the utmost concentration can one follow its labyrinthine passages. In his effort to reveal the implications of reality and reason, he employs the method of thesis, antithesis and synthesis, with analysis as the starting point, the examination of contradictions as the second step, and finally the arrival at unity by means of reason in a summation of ultimate truths. Hegel's famous system is applied to the whole of experience, beginning with logic, going on to the philosophy of nature and thence to the philosophy of mind and spirit. Within these categories, anthropology, psychology, metaphysics, law, ethics, morality, government, property, the family, emotions, customs, art, religion, history and many other facets of thought and life are examined analytically, in their opposites and finally in synthesis. Concededly his most lucid essay, *Philosophical History* reveals Hegel's method and emphasizes the basic idea of history as progress toward the goal of a truly rational freedom.

PHILOSOPHICAL HISTORY

G. W. F. HEGEL

The most general definition that can be given, is, that the Philosophy of History means nothing but the *thoughtful consideration of it*. Thought is, indeed, essential to humanity. It is this that distinguishes us from the brutes. In sensation, cognition and intellection; in our instincts and volitions, as far as they are truly human, Thought is an invariable element. To insist upon Thought in this connection with history, may however, appear unsatisfactory. In this science it would seem as if Thought must be subordinate to what is given, to the realities of fact; that this is its basis and guide: while Philosophy dwells in the region of self-produced ideas, without reference to actuality. Approaching history thus prepossessed, Speculation might be expected to treat it as a mere passive material; and, so far from leaving it in its native truth, to force it into conformity with a tyrannous idea, and to construe it, as the phrase is, "*à priori*." But as it is the business of history simply to adopt into its records what is and has been, actual occurrences and transactions; and since it remains true to its character in proportion as it strictly adheres to its data, we seem to have in Philosophy, a process diametrically opposed to that of the historiographer. This contradiction, and the charge consequently brought against speculation, shall be explained and confuted. We do not, however, propose to correct the innumerable special misrepresentations, trite or novel, that are current respecting the aims, the interests, and the

modes of treating history, and its relation to Philosophy.

The only Thought which Philosophy brings with it to the contemplation of History, is the simple conception of *Reason*; that Reason is the Sovereign of the World; that the history of the world, therefore, presents us with a rational process. This conviction and intuition is a hypothesis in the domain of history as such. In that of Philosophy it is no hypothesis. It is there proved by speculative cognition, that Reason—and this term may here suffice us, without investigating the relation sustained by the Universe to the Divine Being,—is *Substance*, as well as *Infinite Power*; its own *Infinite Material* underlying all the natural and spiritual life which it originates, as also the *Infinite Form*,—that which sets this Material in motion. On the one hand, Reason is the *substance* of the Universe; viz. that by which and in which all reality has its being and subsistence. On the other hand, it is the *Infinite Energy* of the Universe; since Reason is not so powerless as to be incapable of producing anything but a mere ideal, a mere intention—having its place outside reality, nobody knows where; something separate and abstract, in the heads of certain human beings. It is *the infinite complex of things*, their entire Essence and Truth. It is its own material which it commits to its own Active Energy to work up; not needing, as finite action does, the conditions of an external material of given means from which it may obtain its support, and the objects of its activity. It supplies its own nourishment, and is the object of its own operations. While it is exclusively its own basis of existence, and absolute final aim, it is also the energizing power realizing this aim; developing it not only in the phenomena of the Natural, but also of the Spiritual Universe—the History of the World. That this “Idea” or “Reason” is the *True*, the *Eternal*, the absolutely *powerful* essence; that it reveals itself in the World, and that in that World nothing else is revealed but this and its honour and glory—is the thesis which, as we have said, has been proved in Philosophy, and is here regarded as demonstrated.

In those of my hearers who are not acquainted with Philosophy, I may fairly presume, at least, the existence of a *be-*

lief in Reason, a desire, a thirst for acquaintance with it, in entering upon this course of Lectures. It is, in fact, the wish for rational insight, not the ambition to amass a mere heap of acquirements, that should be presupposed in every case as possessing the mind of the learner in the study of science. If the clear idea of Reason is not already developed in our minds, in beginning the study of Universal History, we should at least have the firm, unconquerable faith that Reason *does* exist there; and that the World of intelligence and conscious volition is not abandoned to chance, but must shew itself in the light of the self-cognizant Idea. Yet I am not obliged to make any such preliminary demand upon your faith. What I have said thus provisionally, and what I shall have further to say, is, even in reference to *our* branch of science, not to be regarded as hypothetical, but as a summary view of the whole; the *result of the investigation* we are about to pursue; a result which happens to be known to *me*, because I have traversed the entire field. It is only an inference from the history of the World, that its development has been a rational process; that the history in question has constituted the rational necessary course of the World-Spirit—that Spirit whose nature is always one and the same, but which unfolds this its one nature in the phenomena of the World's existence. This must, as before stated, present itself as the ultimate *result* of History. But we have to take the latter as it is. We must proceed historically—empirically. Among other precautions we must take care not to be misled by professed historians who (especially among the Germans, and enjoying a considerable authority), are chargeable with the very procedure of which they accuse the Philosopher—introducing *à priori* inventions of their own into the records of the Past. It is, for example, a widely current fiction, that there was an original primæval people, taught immediately by God, endowed with perfect insight and wisdom, possessing a thorough knowledge of all natural laws and spiritual truth; that there have been such or such sacerdotal peoples; or, to mention a more specific averment, that there was a Roman Epos, from which the Roman historians derived the early annals of their city, &c. Authori-

ties of this kind we leave to those talented historians by profession, among whom (in Germany at least) their use is not uncommon.—We might then announce it as the first condition to be observed, that we should faithfully adopt all that is historical. But in such general expressions themselves, as “faithfully” and “adopt,” lies the ambiguity. Even the ordinary, the “impartial” historiographer, who believes and professes that he maintains a simply receptive attitude; surrendering himself only to the data supplied him—is by no means passive as regards the exercise of his thinking powers. He brings his categories with him, and sees the phenomena presented to his mental vision, exclusively through these media. And, especially in all that pretends to the name of science, it is indispensable that Reason should not sleep—that reflection should be in full play. To him who looks upon the world rationally, the world in its turn, presents a rational aspect. The relation is mutual. But the various exercises of reflection—the different points of view—the modes of deciding the simple question of the relative importance of events (the first category that occupies the attention of the historian), do not belong to this place.

I will only mention two phases and points of view that concern the generally diffused conviction that Reason has ruled, and is still ruling in the world, and consequently in the world's history; because they give us, at the same time, an opportunity for more closely investigating the question that presents the greatest difficulty, and for indicating a branch of the subject, which will have to be enlarged on in the sequel.

I.—One of these points is, that passage in history, which informs us that the Greek Anaxagoras was the first to enunciate the doctrine that *νοῦς*, Understanding generally, or Reason, governs the world. It is not intelligence as self-conscious Reason,—not a Spirit as such that is meant; and we must clearly distinguish these from each other. The movement of the solar system takes place according to unchangeable laws. These laws are Reason, implicit in the phenomena in question. But neither the sun nor the planets, which revolve around it according to these laws, can be said to have any consciousness of them.

A thought of this kind,—that Nature is an embodiment of Reason; that it is unchangeably subordinate to universal laws, appears nowise striking or strange to us. We are accustomed to such conceptions, and find nothing extraordinary in them. And I have mentioned this extraordinary occurrence, partly to shew how history teaches, that ideas of this kind, which may seem trivial to us, have not always been in the world; that on the contrary, such a thought makes an epoch in the annals of human intelligence. Aristotle says of Anaxagoras, as the originator of the thought in question, that he appeared as a sober man among the drunken. Socrates adopted the doctrine from Anaxagoras, and it forthwith became the ruling idea in Philosophy,—except in the school of Epicurus, who ascribed all events to chance. “I was delighted with the sentiment,”—Plato makes Socrates say,—“and hoped I had found a teacher who would shew me Nature in harmony with Reason, who would demonstrate in each particular phenomenon its specific aim, and in the whole, the grand object of the Universe. I would not have surrendered this hope for a great deal. But how very much was I disappointed, when, having zealously applied myself to the writings of Anaxagoras, I found that he adduces only external causes, such as Atmosphere, Ether, Water, and the like.” It is evident that the defect which Socrates complains of respecting Anaxagoras’s doctrine, does not concern the principle itself, but the shortcoming of the propounder in applying it to Nature in the concrete. Nature is not deduced from that principle: the latter remains in fact a mere abstraction, inasmuch as the former is not comprehended and exhibited as a development of it,—an organisation produced by and from Reason. I wish, at the very outset, to call your attention to the important difference between a conception, a principle, a truth limited to an *abstract* form and its determinate application, and concrete development. This distinction affects the whole fabric of philosophy; and among other bearings of it there is one to which we shall have to revert at the close of our view of Universal History, in investigating the aspect of political affairs in the most recent period.

We have next to notice the rise of this idea—that Reason

directs the World—in connection with a further application of it, well known to us,—in the form, viz. of the *religious truth*, that the world is not abandoned to chance and external contingent causes, but that a *Providence* controls it. I stated above, that I would not make a demand on your faith, in regard to the principle announced. Yet I might appeal to your belief in it, *in this religious aspect*, if, as a general rule, the nature of philosophical science allowed it to attach authority to presuppositions. To put it in another shape,—this appeal is forbidden, because the science of which we have to treat, proposes itself to furnish the proof (not indeed of the abstract *Truth* of the doctrine, but) of its correctness as compared with facts. The truth, then, that a Providence (that of God) presides over the events of the World—consorts with the proposition in question; for *Divine Providence* is Wisdom, endowed with an infinite Power, which realises its aim, viz. the absolute rational design of the World. Reason is Thought conditioning itself with perfect freedom. But a difference—rather a contradiction—will manifest itself, between this belief and our principle, just as was the case in reference to the demand made by Socrates in the case of Anaxagoras's dictum. For that belief is similarly indefinite; it is what is called a belief in a general Providence, and is not followed out into definite application, or displayed in its bearing on the grand total—the entire course of human history. But to *explain* History is to depict the passions of mankind, the genius, the active powers, that play their part on the great stage; and the providentially determined process which these exhibit, constitutes what is generally called the “plan” of Providence. Yet it is this very plan which is supposed to be concealed from our view: which it is deemed presumption, even to wish to recognise. The ignorance of Anaxagoras, as to how intelligence reveals itself in actual existence, was ingenuous. Neither in his consciousness, nor in that of Greece at large, had that thought been farther expanded. He had not attained the power to apply his general principle to the concrete, so as to deduce the latter from the former. It was Socrates who took the first step in comprehending the union of the Concrete with the

Universal. Anaxagoras, then, did not take up a *hostile* position towards such an application. The common belief in Providence *does*; at least it opposes the use of the principle on the large scale, and denies the possibility of discerning the plan of Providence. In isolated cases this plan is supposed to be manifest. Pious persons are encouraged to recognise in particular circumstances, something more than mere chance; to acknowledge the guiding hand of God; *e.g.* when help has unexpectedly come to an individual in great perplexity and need. But these instances of providential design are of a limited kind, and concern the accomplishment of nothing more than the desires of the individual in question. But in the history of the World, the *Individuals* we have to do with are *Peoples*; Totalities that are States. We cannot, therefore, be satisfied with what we may call this "peddling" view of Providence, to which the belief alluded to limits itself. Equally unsatisfactory is the merely abstract, undefined belief in a Providence, when that belief is not brought to bear upon the details of the process which it conducts. On the contrary our earnest endeavour must be directed to the recognition of the ways of Providence, the means it uses, and the historical phenomena in which it manifests itself; and we must shew their connection with the general principle above mentioned. But in noticing the recognition of the plan of Divine Providence generally, I have implicitly touched upon a prominent question of the day; viz. that of the possibility of knowing God: or rather—since public opinion has ceased to allow it to be a matter of *question*—the *doctrine* that it is impossible to know God. In direct contravention of what is commanded in holy Scripture as the highest duty,—that we should not merely love, but *know* God,—the prevalent dogma involves the denial of what is there said; viz. that it is the Spirit (*der Geist*) that leads into Truth, knows all things, penetrates even into the deep things of the Godhead. While the Divine Being is thus placed beyond our knowledge, and outside the limit of all human things, we have the convenient licence of wandering as far as we list, in the direction of our own fancies. We are freed from the obligation to refer our knowledge to the

Divine and True. On the other hand, the vanity and egotism which characterise it, find, in this false position, ample justification; and the pious modesty which puts far from it the knowledge of God, can well estimate how much furtherance thereby accrues to its own wayward and vain strivings. I have been unwilling to leave out of sight the connection between our thesis—that Reason governs and has governed the World—and the question of the possibility of a knowledge of God, chiefly that I might not lose the opportunity of mentioning the imputation against Philosophy of being shy of noticing religious truths, or of having occasion to be so; in which is insinuated the suspicion that it has anything but a clear conscience in the presence of these truths. So far from this being the case, the fact is, that in recent times Philosophy has been obliged to defend the domain of religion against the attacks of several theological systems. In the Christian religion God has revealed Himself,—that is, he has given us to understand what He is; so that He is no longer a concealed or secret existence. And this possibility of knowing Him, thus afforded us, renders such knowledge a duty. God wishes no narrow-hearted souls or empty heads for his children; but those whose spirit is of itself indeed, poor, but rich in the knowledge of Him; and who regard this knowledge of God as the only valuable possession. That development of the thinking spirit, which has resulted from the revelation of the Divine Being as its original basis, must ultimately advance to the *intellectual* comprehension of what was presented in the first instance, to *feeling* and *imagination*. The time must eventually come for understanding that rich product of active Reason, which the History of the World offers to us. It was for a while the fashion to profess admiration for the wisdom of God, as displayed in animals, plants, and isolated occurrences. But, if it be allowed that Providence manifests itself in such objects and forms of existence, why not also in Universal History. This is deemed too great a matter to be thus regarded. But Divine Wisdom, *i. e.* Reason, is one and the same in the great as in the little; and we must not imagine God to be too weak to exercise his wisdom on the grand scale.

Our intellectual striving aims at realizing the conviction that what was *intended* by eternal wisdom, is actually *accomplished* in the domain of existent, active Spirit, as well as in that of mere Nature. Our mode of treating the subject is, in this aspect, a Theodicæa,—a justification of the ways of God,—which Leibnitz attempted metaphysically, in his method, *i. e.* in indefinite abstract categories,—so that the ill that is found in the World may be comprehended, and the thinking Spirit reconciled with the fact of the existence of evil. Indeed, nowhere is such a harmonising view more pressingly demanded than in Universal History; and it can be attained only by recognising the *positive* existence, in which that negative element is a subordinate, and vanquished nullity. On the one hand, the ultimate design of the World must be perceived; and, on the other hand, the fact that this design has been actually realized in it, and that evil has not been able permanently to assert a competing position. But this conviction involves much more than the mere belief in a superintending *νοῦς*, or in "Providence." "Reason," whose sovereignty over the World has been maintained, is as indefinite a term as "Providence," supposing the term to be used by those who are unable to characterize it distinctly,—to shew wherein it consists, so as to enable us to decide whether a thing is rational or irrational. An adequate definition of Reason is the first desideratum; and whatever boast may be made of strict adherence to it in explaining phenomena,—without such a definition we get no farther than mere words. With these observations we may proceed to the second point of view that has to be considered in this Introduction.

II. The enquiry into the *essential destiny* of Reason—as far as it is considered in reference to the World—is identical with the question, *what is the ultimate design of the World?* And the expression implies that that design is destined to be realised. Two points of consideration suggest themselves: first, the *import* of this design—its abstract definition; and secondly, its *realization*.

It must be observed at the outset, that the phenomenon we investigate—Universal History—belongs to the realm of

Spirit. The term "*World*," includes both physical and psychical Nature. Physical Nature also plays its part in the World's History, and attention will have to be paid to the fundamental natural relations thus involved. But *Spirit*, and the course of its development, is our substantial object. Our task does not require us to contemplate Nature as a Rational System in itself—though in its own proper domain it proves itself such—but simply in its relation to *Spirit*. On the stage on which we are observing it,—Universal History—*Spirit* displays itself in its most concrete reality. Notwithstanding this (or rather for the very purpose of comprehending the *general* principles which this, its form of *concrete reality*, embodies) we must premise some abstract characteristics of the *nature of Spirit*. Such an explanation, however, cannot be given here under any other form than that of bare assertion. The present is not the occasion for unfolding the idea of *Spirit* speculatively; for whatever has a place in an Introduction, must, as already observed, be taken as simply historical; something assumed as having been explained and proved elsewhere; or whose demonstration awaits the sequel of the Science of History itself.

We have therefore to mention here:

- (1) The abstract characteristics of the nature of *Spirit*.
- (2) What means *Spirit* uses in order to realize its Idea.
- (3) Lastly, we must consider the shape which the perfect embodiment of *Spirit* assumes—the State.

(1) The nature of *Spirit* may be understood by a glance at its direct opposite—*Matter*. As the essence of *Matter* is Gravity, so; on the other hand, we may affirm that the substance, the essence of *Spirit* is Freedom. All will readily assent to the doctrine that *Spirit*, among other properties, is also endowed with Freedom; but philosophy teaches that all the qualities of *Spirit* exist only through Freedom; that all are but means for attaining Freedom; that all seek and produce this and this alone. It is a result of speculative Philosophy, that Freedom is the sole truth of *Spirit*. *Matter* possesses gravity in virtue of its tendency towards a central point. It is essentially composite; consisting of parts that *exclude* each

other. It seeks its Unity; and therefore exhibits itself as self-destructive, as verging towards its opposite [an indivisible point]. If it could attain this, it would be Matter no longer, it would have perished. It strives after the realization of its Idea; for in Unity it exists *ideally*. Spirit, on the contrary, may be defined as that which has its centre in itself. It has not a unity outside itself, but has already found it; it exists *in* and *with itself*. Matter has its essence out of itself; Spirit is *self-contained existence* (Bei-sich-selbst-seyn). Now this is Freedom, exactly. For if I am dependent, my being is referred to something else which I am not; I cannot exist independently of something external. I am free, on the contrary, when my existence depends upon myself. This self-contained existence of Spirit is none other than self-consciousness—consciousness of one's own being. Two things must be distinguished in consciousness; first, the fact *that I know*; secondly, *what I know*. In *self* consciousness these are merged in one; for Spirit *knows itself*. It involves an appreciation of its own nature, as also an energy enabling it to realise itself; to make itself *actually* that which it is *potentially*. According to this abstract definition it may be said of Universal History, that it is the exhibition of Spirit in the process of working out the knowledge of that which it is potentially. And as the germ bears in itself the whole nature of the tree, and the taste and form of its fruits, so do the first traces of Spirit virtually contain the whole of that History. The Orientals have not attained the knowledge that Spirit—Man *as such*—is free; and because they do not know this, they are not free. They only know that *one is free*. But on this very account, the freedom of that one is only caprice; ferocity—brutal recklessness of passion, or a mildness and tameness of the desires, which is itself only an accident of Nature—mere caprice like the former.—That *one* is therefore only a Despot; not a *free man*. The consciousness of Freedom first arose among the Greeks, and therefore they were free; but they, and the Romans likewise, knew only that *some* are free,—not man as such. Even Plato and Aristotle did not know this. The Greeks, therefore, had slaves; and their whole life and the maintenance of their

splendid liberty, was implicated with the institution of slavery: a fact moreover, which made that liberty on the one hand only an accidental, transient and limited growth; on the other hand, constituted it a rigorous thralldom of our common nature—of the Human. The German nations, under the influence of Christianity, were the first to attain the consciousness, that man, as man, is free: that it is the *freedom* of Spirit which constitutes its essence. This consciousness arose first in religion, the inmost region of Spirit; but to introduce the principle into the various relations of the actual world, involves a more extensive problem than its simple implantation; a problem whose solution and application require a severe and lengthened process of culture. In proof of this, we may note that slavery did not cease immediately on the reception of Christianity. Still less did liberty predominate in States; or Governments and Constitutions adopt a rational organization, or recognise freedom as their basis. That application of the principle to political relations; the thorough moulding and interpenetration of the constitution of society by it, is a process identical with history itself. I have already directed attention to the distinction here involved, between a principle as such, and its *application*; *i. e.* its introduction and carrying out in the actual phenomena of Spirit and Life. This is a point of fundamental importance in our science, and one which must be constantly respected as essential. And in the same way as this distinction has attracted attention in view of the *Christian* principle of self-consciousness—Freedom; it also shews itself as an essential one, in view of the principle of Freedom *generally*. The History of the world is none other than the progress of the consciousness of Freedom; a progress whose development according to the necessity of its nature, it is our business to investigate.

The general statement given above, of the various grades in the consciousness of Freedom—and which we applied in the first instance to the fact that the Eastern nations knew only that *one* is free; the Greek and Roman world only that *some* are free; whilst *we* know that all men absolutely (man *as man*) are free,—supplies us with the natural division of Universal History, and suggests the mode of its discussion.

This is remarked, however, only incidentally and anticipatively; some other ideas must be first explained.

The destiny of the spiritual World, and,—since this is the *substantial World*, while the physical remains subordinate to it, or, in the language of speculation, has no truth *as against* the spiritual,—the *final cause of the World at large*, we allege to be the *consciousness* of its own freedom on the part of Spirit, and *ipso facto*, the *reality* of that freedom. But that this term "Freedom," without further qualification, is an indefinite, and incalculable ambiguous term; and that while that which it represents is the *ne plus ultra* of attainment, it is liable to an infinity of misunderstandings, confusions and errors, and to become the occasion for all imaginable excesses,—has never been more clearly known and felt than in modern times. Yet, for the present, we must content ourselves with the term itself without farther definition. Attention was also directed to the importance of the infinite difference between a principle in the abstract, and its realization in the concrete. In the process before us, the essential nature of freedom,—which involves in it absolute necessity,—is to be displayed as coming to a consciousness of itself (for it is in its very nature, self-consciousness) and thereby realizing its existence. Itself is its own object of attainment, and the sole aim of Spirit. This result it is, at which the process of the World's History has been continually aiming; and to which the sacrifices that have ever and anon been laid on the vast altar of the earth, through the long lapse of ages, have been offered. This is the only aim that sees itself realized and fulfilled; the only pole of repose amid the ceaseless change of events and conditions, and the sole efficient principle that pervades them. This final aim is God's purpose with the world; but God is the absolutely perfect Being, and can, therefore, will nothing other than himself—his own Will. The Nature of His Will—that is, His Nature itself—is what we here call the Idea of Freedom; translating the language of Religion into that of Thought. The question, then, which we may next put, is: What means does this principle of Freedom use for its realization? This is the second point we have to consider.

(2) The question of the *means* by which Freedom devel-

ops itself to a World, conducts us to the phenomenon of History itself. Although Freedom is, primarily, an undeveloped idea, the means it uses are external and phenomenal; presenting themselves in History to our sensuous vision. The first glance at History convinces us that the actions of men proceed from their needs, their passions, their characters and talents; and impresses us with the belief that such needs, passions and interests are the sole springs of action—the efficient agents in this scene of activity. Among these may, perhaps, be found aims of a liberal or universal kind—benevolence it may be, or noble patriotism; but such virtues and general views are but insignificant as compared with the World and its doings. We may perhaps see the Ideal of Reason actualized in those who adopt such aims, and within the sphere of their influence; but they bear only a trifling proportion to the mass of the human race; and the extent of that influence is limited accordingly. Passions, private aims, and the satisfaction of selfish desires, are on the other hand, most effective springs of action. Their power lies in the fact that they respect none of the limitations which justice and morality would impose on them; and that these natural impulses have a more direct influence over man than the artificial and tedious discipline that tends to order and self-restraint, law and morality. When we look at this display of passions, and the consequences of their violence; the Unreason which is associated not only with them, but even (rather we might say *especially*) with *good* designs and righteous aims; when we see the evil, the vice, the ruin that has befallen the most flourishing kingdoms which the mind of man ever created; we can scarce avoid being filled with sorrow at this universal taint of corruption: and, since this decay is not the work of mere Nature, but of the Human Will—a moral embitterment—a revolt of the Good Spirit (if it have a place within us) may well be the result of our reflections. Without rhetorical exaggeration, a simply truthful combination of the miseries that have overwhelmed the noblest of nations and polities, and the finest exemplars of private virtue,—forms a picture of most fearful aspect, and excites emotions of the profoundest and

most hopeless sadness, counterbalanced by no consolatory result. We endure in beholding it a mental torture, allowing no defence or escape but the consideration that what has happened could not be otherwise; that it is a fatality which no intervention could alter. And at last we draw back from the intolerable disgust with which these sorrowful reflections threaten us, into the more agreeable environment of our individual life—the Present formed by our private aims and interests. In short we retreat into the selfishness that stands on the quiet shore, and thence enjoys in safety the distant spectacle of “wrecks confusedly hurled.” But even regarding History as the slaughter-bench at which the happiness of peoples, the wisdom of States, and the virtue of individuals have been victimised—the question involuntarily arises—to what principle, to what final aim these enormous sacrifices have been offered. From this point the investigation usually proceeds to that which we have made the general commencement of our enquiry. Starting from this we pointed out those phenomena which made up a picture so suggestive of gloomy emotions and thoughtful reflections—as *the very field* which we, for our part, regard as exhibiting only the means for realizing what we assert to be the essential destiny—the absolute aim, or—which comes to the same thing—the true *result* of the World’s History. We have all along purposely eschewed “moral reflections” as a method of rising from the scene of historical specialities to the general principles which they embody. Besides, it is not the interest of such sentimentalities, really to rise above those depressing emotions; and to solve the enigmas of Providence which the considerations that occasioned them, present. It is essential to their character to find a gloomy satisfaction in the empty and fruitless sublimities of that negative result. We return then to the point of view which we have adopted; observing that the successive steps (Momente) of the analysis to which it will lead us, will also evolve the conditions requisite for answering the enquiries suggested by the panorama of sin and suffering that history unfolds.

The *first* remark we have to make, and which—though al-

ready presented more than once—cannot be too often repeated when the occasion seems to call for it,—is that what we call *principle, aim, destiny*, or the nature and idea of Spirit, is something merely general and abstract. Principle—Plan of Existence—Law—is a hidden, undeveloped essence, which *as such*—however true in itself—is not completely real. Aims, principles, &c., have a place in our thoughts, in our subjective design only; but not yet in the sphere of reality. That which exists for itself only, is a possibility, a potentiality; but has not yet emerged into Existence. A *second* element must be introduced in order to produce actuality—viz. actuation, realization; and whose motive power is the Will—the activity of man in the widest sense. It is only by this activity that that Idea as well as abstract characteristics generally, are realised, actualised; for of themselves they are powerless. The motive power that puts them in operation, and gives them determinate existence, is the need, instinct, inclination, and passion of man. That some conception of mine should be developed into act and existence, is my earnest desire: I wish to assert my personality in connection with it: I wish to be satisfied by its execution. If I am to exert myself for any object, it must in some way or other be *my* object. In the accomplishment of such or such designs I must at the same time find *my* satisfaction; although the purpose for which I exert myself includes a complication of results, many of which have no interest for me. This is the absolute right of personal existence—to find *itself* satisfied in its activity and labour. If men are to interest themselves for anything, they must (so to speak) have part of their existence involved in it; find their individuality gratified by its attainment. Here a mistake must be avoided. We intend blame, and justly impute it as a fault, when we say of an individual, that he is “interested” (in taking part in such or such transactions,) that is, seeks only his private advantage. In reprehending this we find fault with him for furthering his personal aims without any regard to a more comprehensive design; of which he takes advantage to promote his own interest, or which he even sacrifices with this view. But he who is active in *promoting an object*, is not simply “interested,” but

interested in that object itself. Language faithfully expresses this distinction.—Nothing therefore happens, nothing is accomplished, unless the individuals concerned, seek their own satisfaction in the issue. They are particular units of society; *i.e.* they have special needs, instincts, and interests generally, peculiar to themselves. Among these needs are not only such as we usually call necessities—the stimuli of individual desire and volition—but also those connected with individual views and convictions; or—to use a term expressing less decision—leanings of opinion; supposing the impulses of reflection, understanding, and reason, to have been awakened. In these cases people demand, if they are to exert themselves in any direction, that the object should commend itself to them; that in point of opinion,—whether as to its goodness, justice, advantage, profit,—they should be able to “enter into it” (*dabei seyn*). This is a consideration of especial importance in our age, when people are less than formerly influenced by reliance on others, and by authority; when, on the contrary, they devote their activities to a cause on the ground of their own understanding, their independent conviction and opinion.

We assert then that nothing has been accomplished without interest on the part of the actors; and—if interest be called passion, inasmuch as the whole individuality, to the neglect of all other actual or possible interests and claims, is devoted to an object with every fibre of volition, concentrating all its desires and powers upon it—we may affirm absolutely that *nothing great in the World* has been accomplished without *passion*. Two elements, therefore, enter into the object of our investigation; the first the Idea, the second the complex of human passions; the one the warp, the other the woof of the vast arras-web of Universal History. The concrete mean and union of the two is Liberty, under the conditions of morality in a State. We have spoken of the Idea of Freedom as the nature of Spirit, and the absolute goal of History. Passion is regarded as a thing of sinister aspect, as more or less immoral. Man is required to have no passions. Passion, it is true, is not quite the suitable word for what I wish to express. I mean here nothing more than human activity as resulting from pri-

vate interests—special, or if you will, self-seeking designs,—with this qualification, that the whole energy of will and character is devoted to their attainment; that other interests, (which would in themselves constitute attractive aims) or rather all things else, are sacrificed to them. The object in question is so bound up with the man's will, that it entirely and alone determines the "hue of resolution," and is inseparable from it. It has become the very essence of his volition. For a person is a specific existence; not man in general, (a term to which no real existence corresponds) but a particular human being. The term "character" likewise expresses this idiosyncrasy of Will and Intelligence. But *Character* comprehends all peculiarities whatever; the way in which a person conducts himself in private relations, &c., and is not limited to his idiosyncrasy in its practical and active phase. I shall, therefore, use the term "passion;" understanding thereby the particular bent of character, as far as the peculiarities of volition are not limited to private interest, but supply the impelling and actuating force for accomplishing deeds shared in by the community at large. Passion is in the first instance the *subjective*, and therefore the *formal* side of energy, will, and activity—leaving the object or aim still undetermined. And there is a similar relation of formality to reality in merely individual conviction, individual views, individual conscience. It is always a question of essential importance, what is the purport of my conviction, what the object of my passion, in deciding whether the one or the other is of a true and substantial nature. Conversely, if it is so, it will inevitably attain actual existence—be realized.

From this comment on the second essential element in the historical embodiment of an aim, we infer—glancing at the institution of the State in passing,—that a State is then well constituted and internally powerful, when the private interest of its citizens is one with the common interest of the State; when the one finds its gratification and realization in the other,—a proposition in itself very important. But in a State many institutions must be adopted, much political machinery invented, accompanied by appropriate political arrangements,

—necessitating long struggles of the understanding before what is really appropriate can be discovered,—involving, moreover, contentions with private interest and passions, and a tedious discipline of these latter, in order to bring about the desired harmony. The epoch when a State attains this harmonious condition, marks the period of its bloom, its virtue, its vigour, and its prosperity. But the history of mankind does not begin with a *conscious* aim of any kind, as it is the case with the particular circles into which men form themselves of set purpose. The mere social instinct implies a conscious purpose of security for life and property; and when society has been constituted, this purpose becomes more comprehensive. The History of the World begins with its general aim—the realization of the Idea of Spirit—only in an *implicit* form (*an sich*) that is, as Nature; a hidden, most profoundly hidden, unconscious instinct; and the whole process of History (as already observed), is directed to rendering this unconscious impulse a conscious one. Thus appearing in the form of merely natural existence, natural will—that which has been called the subjective side,—physical craving, instinct, passion, private interest, as also opinion and subjective conception,—spontaneously present themselves at the very commencement. This vast congeries of volitions, interests and activities, constitute the instruments and means of the World-Spirit for attaining its object; bringing it to consciousness, and realizing it. And this aim is none other than finding itself—coming to itself—and contemplating itself in concrete actuality. But that those manifestations of vitality on the part of individuals and peoples, in which they seek and satisfy their own purposes, are, at the same time, the means and instruments of a higher and broader purpose of which they know nothing,—which they realize unconsciously,—might be made a matter of question; rather has been questioned, and in every variety of form negatived, decried and condemned as mere dreaming and “Philosophy.” But on this point I announced my view at the very outset, and asserted our hypothesis,—which, however, will appear in the sequel, in the form of a legitimate inference,—and our belief, that Reason

governs the world, and has consequently governed its history. In relation to this independently universal and substantial existence—all else is subordinate, subservient to it, and the means for its development.—The Union of Universal Abstract Existence generally with the Individual,—the Subjective—that this alone is Truth, belongs to the department of speculation, and is treated in this general form in Logic.—But in the process of the World's History itself—as still incomplete,—the abstract final aim of history is not yet made the distinct object of desire and interest. While these limited sentiments are still unconscious of the purpose they are fulfilling, the universal principle is implicit in them, and is realizing itself through them. The question also assumes the form of the union of *Freedom and Necessity*; the latent abstract process of Spirit being regarded as *Necessity*, while that which exhibits itself in the conscious will of men, as their interest, belongs to the domain of *Freedom*. As the metaphysical connection (*i. e.* the connection in the Idea) of these forms of thought, belongs to Logic, it would be out of place to analyze it here. The chief and cardinal points only shall be mentioned.

Philosophy shews that the Idea advances to an infinite antithesis; that, viz. between the Idea in its free, universal form—in which it exists for itself—and the contrasted form of abstract introversion, reflection on itself, which is formal existence-for-self, personality, formal freedom, such as belongs to Spirit only. The universal Idea exists thus as the substantial totality of things on the one side, and as the abstract essence of free volition on the other side. This reflection of the mind on itself is individual self-consciousness—the polar opposite of the Idea in its general form, and therefore existing in absolute Limitation. This polar opposite is consequently limitation, particularization, for the universal absolute being; it is the side of its *definite existence*; the sphere of its formal reality, the sphere of the reverence paid to God.—To comprehend the absolute connection of this antithesis, is the profound task of metaphysics. This Limitation originates all forms of particularity of whatever kind. The formal volition [of which

we have spoken] wills itself; desires to make its own personality valid in all that it purposes and does: even the pious individual wishes to be saved and happy. This pole of the antithesis, existing for itself, is—in contrast with the Absolute Universal Being—a special separate existence, taking cognizance of speciality only, and willing that alone. In short it plays its part in the region of mere phenomena. This is the sphere of particular purposes, in effecting which individuals exert themselves on behalf of their individuality—give it full play and objective realization. This is also the sphere of happiness and its opposite. He is happy who finds his condition suited to his special character, will, and fancy, and so enjoys himself in that condition. The History of the World is not the theatre of happiness. Periods of happiness are blank pages in it, for they are periods of harmony,—periods when the antithesis is in abeyance. Reflection on self,—the Freedom above described—is abstractly defined as the formal element of the activity of the absolute Idea. The realizing activity of which we have spoken is the middle term of the Syllogism, one of whose extremes is the Universal essence, the *Idea*, which reposes in the penetralia of Spirit; and the other, the complex of external things,—objective matter. That activity is the medium by which the universal latent principle is translated into the domain of objectivity.

I will endeavour to make what has been said more vivid and clear by examples.

The building of a house is, in the first instance, a subjective aim and design. On the other hand we have, as means, the several substances required for the work,—Iron, Wood, Stones. The elements are made use of in working up this material: fire to melt the iron, wind to blow the fire, water to set wheels in motion, in order to cut the wood, &c. The result is, that the wind, which has helped to build the house, is shut out by the house; so also are the violence of rains and floods, and the destructive powers of fire, so far as the house is made fire-proof. The stones and beams obey the law of gravity,—press downwards,—and so high walls are carried up. Thus the elements are made use of in accordance with

their nature, and yet to co-operate for a product, by which their operation is limited. Thus the passions of men are gratified; they develop themselves and their aims in accordance with their natural tendencies, and build up the edifice of human society; thus fortifying a position for Right and Order *against themselves*.

The connection of events above indicated, involves also the fact, that in history an additional result is commonly produced by human actions beyond that which they aim at and obtain—that which they immediately recognise and desire. They gratify their own interest; but something farther is thereby accomplished, latent in the actions in question, though not present to their consciousness, and not included in their design. An analogous example is offered in the case of a man who, from a feeling of revenge,—perhaps not an unjust one, but produced by injury on the other's part,—burns that other man's house. A connection is immediately established between the deed itself and a train of circumstances not directly included in it, taken abstractedly. In itself it consisted in merely presenting a small flame to a small portion of a beam. Events not involved in that simple act follow of themselves. The part of the beam which was set fire to is connected with its remote portions; the beam itself is united with the woodwork of the house generally, and this with other houses; so that a wide conflagration ensues, which destroys the goods and chattels of many other persons besides his against whom the act of revenge was first directed; perhaps even costs not a few men their lives. This lay neither in the deed abstractedly, nor in the design of the man who committed it. But the action has a further general bearing. In the design of the doer it was only revenge executed against an individual in the destruction of his property, but it is moreover a crime, and that involves punishment also. This may not have been present to the mind of the perpetrator, still less in his intention; but his deed itself, the general principles it calls into play, its substantial content entails it. By this example I wish only to impress on you the consideration, that in a simple act, something farther may be implicated than lies in the intention and consciousness

of the agent. The example before us involves, however, this additional consideration, that the substance of the act, consequently we may say the act itself, recoils upon the perpetrator,—reacts upon him with destructive tendency. This union of the two extremes—the embodiment of a general idea in the form of direct reality, and the elevation of a speciality into connection with universal truth—is brought to pass, at first sight, under the conditions of an utter diversity of nature between the two, and an indifference of the one extreme towards the other. The aims which the agents set before them are limited and special; but it must be remarked that the agents themselves are intelligent thinking beings. The purport of their desires is interwoven with *general, essential* considerations of justice, good, duty, &c; for mere desire—volition in its rough and savage forms—falls not within the scene and sphere of Universal History. Those general considerations, which form at the same time a norm for directing aims and actions, have a determinate purport; for such an abstraction as “good for its own sake,” has no place in living reality. If men are to act, they must not only intend the Good, but must have decided for themselves whether this or that particular thing is a Good. What special course of action, however, is good or not, is determined, as regards the ordinary contingencies of private life, by the laws and customs of a State; and here no great difficulty is presented. Each individual has his position; he knows on the whole what a just, honourable course of conduct is. As to ordinary, private relations, the assertion that it is difficult to choose the right and good,—the regarding it as the mark of an exalted morality to find difficulties and raise scruples on that score,—may be set down to an evil or perverse will, which seeks to evade duties not in themselves of a perplexing nature; or, at any rate, to an idly reflective habit of mind—where a feeble will affords no sufficient exercise to the faculties,—leaving them therefore to find occupation within themselves, and to expend themselves on moral self-adulation.

It is quite otherwise with the comprehensive relations that History has to do with. In this sphere are presented those mo-

mentous collisions between existing, acknowledged duties, laws, and rights, and those contingencies which are adverse to this fixed system; which assail and even destroy its foundations and existence; whose tenor may nevertheless seem good,—on the large scale advantageous,—yes, even indispensable and necessary. These contingencies realise themselves in History: they involve a general principle of a different order from that on which depends the *permanence* of a people or a State. This principle is an essential phase in the development of the *creating* Idea, of Truth striving and urging towards [consciousness of] itself. Historical men—*World-Historical Individuals*—are those in whose aims such a general principle lies.

Cæsar, in danger of losing a position, not perhaps at that time of superiority, yet at least of equality with the others who were at the head of the State, and of succumbing to those who were just on the point of becoming his enemies,—belongs essentially to this category. These enemies—who were at the same time pursuing *their* personal aims—had the form of the constitution, and the power conferred by an appearance of justice, on their side. Cæsar was contending for the maintenance of his position, honour, and safety; and, since the power of his opponents included the sovereignty over the provinces of the Roman Empire, his victory secured for him the conquest of that entire Empire; and he thus became—though leaving the form of the constitution—the Autocrat of the State. That which secured for him the execution of a design, which in the first instance was of negative import—the Autocracy of Rome,—was, however, at the same time an independently necessary feature in the history of Rome and of the world. It was not, then, his private gain merely, but an unconscious impulse that occasioned the accomplishment of that for which the time was ripe. Such are all great historical men,—whose own particular aims involve those large issues which are the will of the World-Spirit. They may be called Heroes, inasmuch as they have derived their purposes and their vocation, not from the calm, regular course of things, sanctioned by the existing order; but from a concealed fount

—one which has not attained to phenomenal, present existence,—from that inner Spirit, still hidden beneath the surface, which, impinging on the outer world as on a shell, bursts it in pieces, because it is another kernel than that which belonged to the shell in question. They are men, therefore, who appear to draw the impulse of their life from themselves; and whose deeds have produced a condition of things and a complex of historical relations which appear to be only *their* interest, and *their* work.

Such individuals had no consciousness of the general Idea they were unfolding, while prosecuting those aims of theirs; on the contrary, they were practical, political men. But at the same time they were thinking men, who had an insight into the requirements of the time—*what was ripe for development*. This was the very Truth for their age, for their world; the species next in order, so to speak, and which was already formed in the womb of time. It was theirs to know this nascent principle; the necessary, directly sequent step in progress, which their world was to take; to make this their aim, and to expend their energy in promoting it. World-historical men—the Heroes of an epoch—must, therefore, be recognised as its clear-sighted ones; *their* deeds, *their* words are the best of that time. Great men have formed purposes to satisfy themselves, not others. Whatever prudent designs and counsels they might have learned from others, would be the more limited and inconsistent features in their career; for it was they who best understood affairs; from whom *others* learned, and approved, or at least acquiesced in—their policy. For that Spirit which had taken this fresh step in history is the inmost soul of all individuals; but in a state of unconsciousness which the great men in question aroused. Their fellows, therefore, follow these soul-leaders; for they feel the irresistible power of their own inner Spirit thus embodied. If we go on to cast a look at the fate of these World-Historical persons, whose vocation it was to be the agents of the World-Spirit,—we shall find it to have been no happy one. They attained no calm enjoyment; their whole life was labour and trouble; their whole nature was nought else but

their master-passion. When their object is attained they fall off like empty hulls from the kernel. They die early, like Alexander; they are murdered, like Cæsar; transported to St. Helena, like Napoleon. This fearful consolation—that historical men have not enjoyed what is called happiness, and of which only private life (and this may be passed under very various external circumstances) is capable,—this consolation those may draw from history, who stand in need of it; and it is craved by Envy—vexed at what is great and transcendent,—striving, therefore, to depreciate it, and to find some flaw in it. Thus in modern times it has been demonstrated *ad nauseam* that princes are generally unhappy on their thrones; in consideration of which the possession of a throne is tolerated, and men acquiesce in the fact that not themselves but the personages in question are its occupants. The Free Man, we may observe, is not envious, but gladly recognises what is great and exalted, and rejoices that it exists.

It is in the light of those common elements which constitute the interest and therefore the passions of individuals, that these historical men are to be regarded. They are *great* men, because they willed and accomplished something great; not a mere fancy, a mere intention, but that which met the case and fell in with the needs of the age. This mode of considering them also excludes the so-called “psychological” view, which—serving the purpose of envy most effectually—contrives so to refer all actions to the heart,—to bring them under such a subjective aspect—as that their authors appear to have done everything under the impulse of some passion, mean or grand,—some *morbid craving*,—and on account of these passions and cravings to have been not moral men. Alexander of Macedon partly subdued Greece, and then Asia; therefore he was possessed by a *morbid craving* for conquest. He is alleged to have acted from a craving for fame, for conquest; and the proof that these were the impelling motives is that he did that which resulted in fame. What pedagogue has not demonstrated of Alexander the Great—of Julius Cæsar—that they were instigated by such passions, and were consequently immoral men?—whence the conclusion imme-

diately follows that he, the pedagogue, is a better man than they, because he has not such passions; a proof of which lies in the fact that he does not conquer Asia,—vanquish Darius and Porus,—but while he enjoys life himself, lets others enjoy it too. These psychologists are particularly fond of contemplating those peculiarities of great historical figures which appertain to them as private persons. Man must eat and drink; he sustains relations to friends and acquaintances; he has passing impulses and ebullitions of temper. "No man is a hero to his valet-de-chambre," is a well-known proverb; I have added—and Goethe repeated it ten years later—"but not because the former is no hero, but because the latter is a valet." He takes off the hero's boots, assists him to bed, knows that he prefers champagne, &c. Historical personages waited upon in historical literature by such psychological valets, come poorly off; they are brought down by these their attendants to a level with—or rather a few degrees below the level of—the morality of such exquisite discerners of spirits. The Thersites of Homer who abuses the kings is a standing figure for all times. Blows—that is beating with a solid cudgel—he does not get in every age, as in the Homeric one; but his envy, his egotism, is the thorn which he has to carry in his flesh; and the undying worm that gnaws him is the tormenting consideration that his excellent views and vituperations remain absolutely without result in the world. But our satisfaction at the fate of Thersitism also, may have its sinister side.

A World-historical individual is not so unwise as to indulge a variety of wishes to divide his regards. He is devoted to the One Aim, regardless of all else. It is even possible that such men may treat other great, even sacred interests, inconsiderately; conduct which is indeed obnoxious to moral reprehension. But so mighty a form must trample down many an innocent flower—crush to pieces many an object in its path.

The special interest of passion is thus inseparable from the active development of a general principle: for it is from the special and determinate and from its negation, that the Universal results. Particularity contends with its like, and some

loss is involved in the issue. *It* is not the general idea that is implicated in opposition and combat, and that is exposed to danger. It remains in the background, untouched and uninjured. This may be called the *cunning of reason*,—that it sets the passions to work for itself, while that which develops its existence through such impulsion pays the penalty, and suffers loss. For it is *phenomenal* being that is so treated, and of this, part is of no value, part is positive and real. The particular is for the most part of too trifling value as compared with the general: individuals are sacrificed and abandoned. The Idea pays the penalty of determinate existence and of corruptibility, not from itself, but from the passions of individuals.

But though we might tolerate the idea that individuals, their desires and the gratification of them, are thus sacrificed, and their happiness given up to the empire of chance, to which it belongs; and that as a general rule, individuals come under the category of means to an ulterior end,—there is one aspect of human individuality which we should hesitate to regard in that subordinate light, even in relation to the highest; since it is absolutely no subordinate element, but exists in those individuals as inherently eternal and divine. I mean *morality, ethics, religion*. Even when speaking of the realization of the great ideal aim by means of individuals, the *subjective* element in them—their interest and that of their cravings and impulses, their views and judgments, though exhibited as the merely formal side of their existence,—was spoken of as having an infinite right to be consulted. The first idea that presents itself in speaking of *means* is that of something external to the object, and having no share in the object itself. But merely natural things—even the commonest lifeless objects—used as means, must be of such a kind as adapts them to their purpose; they must possess something in common with it. Human beings least of all, sustain the bare external relation of mere means to the great ideal aim. Not only do they in the very act of realising it, make it the occasion of satisfying personal desires, whose purport is diverse from that aim—but they share in that ideal aim itself; and

are for that very reason objects of their own existence; not *formally* merely, as the world of living beings generally is,—whose individual life is essentially subordinate to that of man, and is properly used *up* as an instrument. Men, on the contrary, are objects of existence to themselves, as regards the intrinsic import of the aim in question. To this order belongs that in them which we would exclude from the category of mere means,—Morality, Ethics, Religion. That is to say, man is an object of existence in himself only in virtue of the Divine that is in him,—that which was designated at the outset as *Reason*; which, in view of its activity and power of self-determination, was called *Freedom*. And we affirm—without entering at present on the proof of the assertion—that Religion, Morality, &c. have their foundation and source in that principle, and so are essentially elevated above all alien necessity and chance. And here we must remark that individuals, to the extent of their freedom, are responsible for the depravation and enfeeblement of morals and religion. This is the seal of the absolute and sublime destiny of man—that he knows what is good and what is evil; that his *Destiny* is his very ability to will either good or evil,—in one word, that he is the subject of moral imputation, imputation not only of evil, but of good; and not only concerning this or that particular matter, and all that happens *ab extrâ*, but *also* the good and evil attaching to his individual freedom. The brute alone is simply innocent. It would, however, demand an extensive explanation—as extensive as the analysis of moral freedom itself—to preclude or obviate all the misunderstandings which the statement that what is called innocence imports the entire unconsciousness of evil—is wont to occasion.

In contemplating the fate which virtue, morality, even piety experience in history, we must not fall into the Litany of Lamentations, that the good and pious often—or for the most part—fare ill in the world, while the evil-disposed and wicked prosper. The term *prosperity* is used in a variety of meanings—riches, outward honour, and the like. But in speaking of something which in and for itself constitutes an aim of existence, that so-called well or ill-faring of these or those isolated

individuals cannot be regarded as an essential element in the rational order of the universe. With more justice than happiness,—or a fortunate environment for individuals,—it is demanded of the grand aim of the world's existence, that it should foster, nay involve the execution and ratification of good, moral, righteous purposes. What makes men morally discontented (a discontent, by the bye, on which they somewhat pride themselves), is that they do not find the present adapted to the realization of aims which they hold to be right and just (more especially in modern times, ideals of political constitutions); they contrast unfavourably things as they *are*, with their idea of things as they *ought* to be. In this case it is not private interest nor passion that desires gratification, but Reason, Justice, Liberty; and equipped with this title, the demand in question assumes a lofty bearing, and readily adopts a position not merely of discontent, but of open revolt against the actual condition of the world. To estimate such a feeling and such views aright, the demands insisted upon, and the very dogmatic opinions asserted, must be examined. At no time so much as in our own, have such general principles and notions been advanced, or with greater assurance. If in days gone by, history seems to present itself as a struggle of passions; in our time—though displays of passion are not wanting—it exhibits partly a predominance of the struggle of notions assuming the authority of principles; partly that of passions and interests essentially subjective, but under the mask of such higher sanctions. The pretensions thus contended for as legitimate in the name of that which has been stated as the ultimate aim of Reason, pass accordingly, for absolute aims,—to the same extent as Religion, Morals, Ethics. Nothing, as before remarked, is now more common than the complaint that the *ideals* which imagination sets up are not realized—that these glorious dreams are destroyed by cold actuality. These Ideals—which in the voyage of life founder on the rocks of hard reality—may be in the first instance only subjective, and belong to the idiosyncrasy of the individual, imagining himself the highest and wisest. Such do not properly belong to this category. For the fancies which

the individual in his isolation indulges, cannot be the model for universal reality; just as *universal* law is not designed for the units of the mass. These as such may, in fact, find their interests decidedly thrust into the background. But by the term "Ideal," we also understand the ideal of Reason, of the Good, of the True. Poets, as *e.g.* Schiller, have painted such ideals touchingly and with strong emotion, and with the deeply melancholy conviction that they could not be realized. In affirming, on the contrary, that the Universal Reason *does* realize itself, we have indeed nothing to do with the individual empirically regarded. That admits of degrees of better and worse, since here chance and speciality have received authority from the Idea to exercise their monstrous power. Much, therefore, in particular aspects of the grand phenomenon might be found fault with. This subjective fault-finding,—which, however, only keeps in view the individual and its deficiency, without taking notice of Reason pervading the whole,—is easy; and inasmuch as it asserts an excellent intention with regard to the good of the whole, and seems to result from a kindly heart, it feels authorized to give itself airs and assume great consequence. It is easier to discover a deficiency in individuals, in states, and in Providence, than to see their real import and value. For in this merely negative fault-finding a proud position is taken,—one which overlooks the object, without having entered into it,—without having comprehended its positive aspect. Age generally makes men more tolerant; youth is always discontented. The tolerance of age is the result of the ripeness of a judgment which, not merely as the result of indifference, is satisfied even with what is inferior; but, more deeply taught by the grave experience of life, has been led to perceive the substantial, solid worth of the object in question. The insight then to which—in contradistinction from those ideals—philosophy is to lead us, is, that the real world is as it ought to be—that the truly good—the universal divine reason—is not a mere abstraction, but a vital principle capable of realising itself. This *Good*, this *Reason*, in its most concrete form, is God. God governs the world; the actual working of his government—the carrying out of his

plan—is the History of the World. This plan philosophy strives to comprehend; for only that which has been developed as the result of it, possesses *bonâ fide* reality. That which does not accord with it, is negative, worthless existence. Before the pure light of this divine Idea—which is no mere Ideal—the phantom of a world whose events are an incoherent concourse of fortuitous circumstances, utterly vanishes. Philosophy wishes to discover the substantial purport, the real side of the divine idea, and to justify the so much despised Reality of things; for Reason is the comprehension of the Divine work. But as to what concerns the perversion, corruption, and ruin of religious, ethical and moral purposes, and states of society generally, it must be affirmed, that in their *essence* these are infinite and eternal; but that the forms they assume may be of a limited order, and consequently belong to the domain of mere nature, and be subject to the sway of chance. They are therefore perishable, and exposed to decay and corruption. Religion and morality—in the same way as inherently universal essences—have the peculiarity of being present in the individual soul, in the full extent of their Idea, and therefore truly and really; although they may not manifest themselves in it *in extenso*, and are not applied to fully developed relations. The religion, the morality of a limited sphere of life—that of a shepherd or a peasant, *e.g.*—in its intensive concentration and limitation to a few perfectly simple relations of life,—has infinite worth; the same worth as the religion and morality of extensive knowledge, and of an existence rich in the compass of its relations and actions. This inner focus—this simple region of the claims of subjective freedom,—the home of volition, resolution, and action,—the abstract sphere of conscience,—that which comprises the responsibility and moral value of the individual, remains untouched; and is quite shut out from the noisy din of the World's History—including not merely external and temporal changes, but also those entailed by the absolute necessity inseparable from the realization of the Idea of Freedom itself. But as a general truth this must be regarded as settled, that whatever in the world possesses claims as noble and glorious,

has nevertheless a higher existence above it. The claim of the World-Spirit rises above all special claims.

These observations may suffice in reference to the means which the World-Spirit uses for realizing its Idea. Stated simply and abstractly, this mediation involves the activity of personal existences in whom Reason is present as their absolute, substantial being; but a basis, in the first instance, still obscure and unknown to them. But the subject becomes more complicated and difficult when we regard individuals not merely in their aspect of activity, but more concretely, in conjunction with a particular manifestation of that activity in their religion and morality,—forms of existence which are intimately connected with Reason, and share in its absolute claims. Here the relation of mere means to an end disappears, and the chief bearings of this seeming difficulty in reference to the absolute aim of Spirit, have been briefly considered.

(3) The third point to be analysed is, therefore—what is the object to be realized by these means; *i. e.* what is the form it assumes in the realm of reality. We have spoken of *means*; but in the carrying out of a subjective, limited aim, we have also to take into consideration the element of a *material*, either already present or which has to be procured. Thus the question would arise: What is the material in which the Ideal of Reason is wrought out? The primary answer would be,—Personality itself—human desires—Subjectivity generally. In human knowledge and volition, as its material element, Reason attains positive existence. We have considered subjective volition where it has an object which is the truth and essence of a reality, *viz.* where it constitutes a great world-historical passion. As a subjective will, occupied with limited passions, it is dependent, and can gratify its desires only within the limits of this dependence. But the subjective will has also a substantial life—a reality,—in which it moves in the region of *essential* being, and has the essential itself as the object of its existence. This essential being is the union of the *subjective* with the *rational* Will: it is the moral Whole, the *State*, which is that form of reality in which the individual has and enjoys his freedom; but on the condition of his recognizing, believing

in and willing that which is common to the Whole. And this must not be understood as if the subjective will of the social unit attained its gratification and enjoyment through that common Will; as if this were a means provided for its benefit; as if the individual, in his relations to other individuals, thus limited his freedom, in order that this universal limitation—the mutual constraint of all—might secure a small space of liberty for each. Rather, we affirm, are Law, Morality, Government, and they alone, the positive reality and completion of Freedom. Freedom of a low and limited order, is mere caprice; which finds its exercise in the sphere of particular and limited desires.

Subjective volition—Passion—is that which sets men in activity, that which effects “practical” realization. The Idea is the inner spring of action; the State is the actually existing, realized moral life. For it is the Unity of the universal, essential Will, with that of the individual; and this is “Morality.” The Individual living in this unity has a moral life; possesses a value that consists in this substantiality alone. Sophocles in his *Antigone*, says, “The divine commands are not of yesterday, nor of to-day; no, they have an infinite existence, and no one could say whence they came.” The laws of morality are not accidental, but are the essentially Rational. It is the very object of the State that what is essential in the practical activity of men, and in their dispositions, should be duly recognized; that it should have a manifest existence, and maintain its position. It is the absolute interest of Reason that this moral Whole should exist; and herein lies the justification and merit of heroes who have founded states,—however rude these may have been. In the history of the World, only those peoples can come under our notice which form a state. For it must be understood that this latter is the realization of Freedom, *i.e.* of the absolute final aim, and that it exists for its own sake. It must further be understood that all the worth which the human being possesses—all spiritual reality, he possesses only through the State. For his spiritual reality consists in this, that his own essence—Reason—is objectively present to him, that it possesses objective immediate existence for him. Thus

only is he fully conscious; thus only is he a partaker of morality—of a just and moral social and political life. For Truth is the Unity of the universal and subjective Will; and the Universal is to be found in the State, in its laws, its universal and rational arrangements. The State is the Divine Idea as it exists on Earth. We have in it, therefore, the object of History in a more definite shape than before; that in which Freedom obtains objectivity, and lives in the enjoyment of this objectivity. For Law is the objectivity of Spirit; volition in its true form. Only that will which obeys law, is free; for it obeys itself—it is independent and so free. When the State or our country constitutes a community of existence; when the subjective will of man submits to laws,—the contradiction between Liberty and Necessity vanishes. The Rational has necessary existence, as being the reality and substance of things, and we are free in recognizing it as law, and following it as the substance of our own being. The objective and the subjective will are then reconciled, and present one identical homogeneous whole. For the morality (*Sittlichkeit*) of the State is not of that ethical (*moralische*) reflective kind, in which one's own conviction bears sway; this latter is rather the peculiarity of the modern time, while the true antique morality is based on the principle of abiding by one's duty [to the state at large]. An Athenian citizen did what was required of him, as it were from instinct: but if I reflect on the object of my activity, I must have the consciousness that my will has been called into exercise. But morality is Duty—substantial Right—a "*second nature*" as it has been justly called; for the *first* nature of man is his primary merely animal existence.

The development *in extenso* of the Idea of the State belongs to the Philosophy of Jurisprudence; but it must be observed that in the theories of our time various errors are current respecting it, which pass for established truths, and have become fixed prejudices. We will mention only a few of them, giving prominence to such as have a reference to the object of our history.

The error which first meets us is the direct contradictory of our principle that the state presents the realization of Free-

dom; the opinion, viz., that man is free by *nature*, but that in *society*, in the State—to which nevertheless he is irresistibly impelled—he must limit this natural freedom. That man is free by Nature is quite correct in one sense; viz., that he is so according to the Idea of Humanity; but we imply thereby that he is such only in virtue of his destiny—that he has an undeveloped power to become such; for the “Nature” of an object is exactly synonymous with its “Idea.” But the view in question imports more than this. When man is spoken of as “free by Nature,” the mode of his existence as well as his destiny is implied. His merely natural and primary condition is intended. In this sense a “state of Nature” is assumed in which mankind at large are in the possession of their natural rights with the unconstrained exercise and enjoyment of their freedom. This assumption is not indeed raised to the dignity of the historical fact; it would indeed be difficult, were the attempt seriously made, to point out any such condition as actually existing, or as having ever occurred. Examples of a savage state of life can be pointed out, but they are marked by brutal passions and deeds of violence; while, however rude and simple their conditions, they involve social arrangements which (to use the common phrase) *restrain* freedom. That assumption is one of those nebulous images which theory produces; an idea which it cannot avoid originating, but which it fathers upon real existence, without sufficient historical justification.

What we find such a state of Nature to be in actual experience, answers exactly to the Idea of a *merely* natural condition. Freedom as the *ideal* of that which is original and natural, does not exist as *original and natural*. Rather must it be first sought out and won; and that by an incalculable medial discipline of the intellectual and moral powers. The state of Nature is, therefore, predominantly that of injustice and violence, of untamed natural impulses, of inhuman deeds and feelings. Limitation is certainly produced by Society and the State, but it is a limitation of the mere brute emotions and rude instincts; as also, in a more advanced stage of culture, of the premeditated self-will of caprice and passion. This kind of

constraint is part of the instrumentality by which only, the consciousness of Freedom and the desire for its attainment, in its true—that is Rational and Ideal form—can be obtained. To the Ideal of Freedom, Law and Morality are indispensably requisite; and they are in and for themselves, universal existences, objects and aims; which are discovered only by the activity of thought, separating itself from the merely sensuous, and developing itself, in opposition thereto; and which must on the other hand, be introduced into and incorporated with the originally sensuous will, and that contrarily to its natural inclination. The perpetually recurring misapprehension of Freedom consists in regarding that term only in its *formal*, subjective sense, abstracted from its essential objects and aims; thus a constraint put upon impulse, desire, passion—pertaining to the particular individual as such—a limitation of caprice and self-will is regarded as a fettering of Freedom. We should on the contrary look upon such limitation as the indispensable proviso of emancipation. Society and the State are the very conditions in which Freedom is realized.

We must notice a second view, contravening the principle of the development of moral relations into a legal form. The *patriarchal* condition is regarded—either in reference to the entire race of man, or to some branches of it—as exclusively that condition of things, in which the legal element is combined with a due recognition of the moral and emotional parts of our nature; and in which justice as united with these, truly and really influences the intercourse of the social units. The basis of the patriarchal condition is the family relation; which develops the *primary* form of conscious morality, succeeded by that of the State as its *second* phase. The patriarchal condition is one of transition, in which the family has already advanced to the position of a race or people; where the union, therefore, has already ceased to be simply a bond of love and confidence, and has become one of plighted service. We must first examine the ethical principle of the Family. The Family may be reckoned as virtually a single person; since its members have either mutually surrendered their individual personality, (and consequently their legal position towards each

other, with the rest of their particular interests and desires) as in the case of the Parents; or have not yet attained such an independent personality—the Children,—who are primarily in that merely natural condition already mentioned. They live, therefore, in a unity of feeling, love, confidence, and faith in each other. And in a relation of mutual love, the one individual has the consciousness of himself in the consciousness of the other; he lives out of self; and in this mutual self-renunciation each regains the life that had been virtually transferred to the other; gains, in fact, that other's existence and his own, as involved with that other. The further interests connected with the necessities and external concerns of life, as well as the development that has to take place within their circle, *i. e.* of the children, constitute a common object for the members of the Family. The Spirit of the Family—the Penates—form one substantial being, as much as the Spirit of a People in the State; and morality in both cases consists in a feeling, a consciousness, and a will, not limited to individual personality and interest, but embracing the common interests of the members generally. But this unity is in the case of the Family essentially one of *feeling*; not advancing beyond the limits of the merely *natural*. The piety of the Family relation should be respected in the highest degree by the State; by its means the State obtains as its members individuals who are already moral (for as mere *persons* they are not) and who in uniting to form a state bring with them that sound basis of a political edifice—the capacity of feeling one with a Whole. But the expansion of the Family to a patriarchal unity carries us beyond the ties of blood-relationship—the simply natural elements of that basis; and outside of these limits the members of the community must enter upon the position of independent personality. A review of the patriarchal condition, *in extenso*, would lead us to give special attention to the Theocratical Constitution. The head of the patriarchal clan is also its priest. If the Family in its general relations, is not yet separated from civic society and the state, the separation of religion from it has also not yet taken place; and so much

the less since the piety of the hearth is itself a profoundly subjective state of feeling.

We have considered two aspects of Freedom,—the objective and the subjective; if, therefore, Freedom is asserted to consist in the individuals of a State all agreeing in its arrangements, it is evident that only the subjective aspect is regarded. The natural inference from this principle is, that no law can be valid without the approval of all. This difficulty is attempted to be obviated by the decision that the minority must yield to the majority; the majority therefore bear the sway. But long ago J. J. Rousseau remarked, that in that case there would be no longer freedom, for the will of the *minority* would cease to be respected. At the Polish Diet each single member had to give his consent before any political step could be taken; and this kind of freedom it was that ruined the State. Besides, it is a dangerous and false prejudice, that the People *alone* have reason and insight, and know what justice is; for each popular faction may represent itself as the People, and the question as to what constitutes the State is one of advanced science, and not of popular decision.

If the principle of regard for the individual will is recognized as the only basis of political liberty, viz., that nothing should be done by or for the State to which all the members of the body politic have not given their sanction, we have, properly speaking, no *Constitution*. The only arrangement that would be necessary, would be, first, a centre having no *will* of its own, but which should take into consideration what appeared to be the necessities of the State; and, secondly, a contrivance for calling the members of the State together, for taking the votes, and for performing the arithmetical operations of reckoning and comparing the number of votes for the different propositions, and thereby deciding upon them. The State is an *abstraction*, having even its generic existence in its citizens; but it is an actuality, and its simply generic existence must embody itself in individual will and activity. The want of government and political administration in general is felt; this necessitates the selection and sepa-

ration from the rest of those who have to take the helm in political affairs, to decide concerning them, and to give orders to other citizens, with a view to the execution of their plans. If e.g. even the people in a Democracy resolve on a war, a general must head the army. It is only by a Constitution that the *abstraction*—the State—attains life and reality; but this involves the distinction between those who command and those who obey.—Yet obedience seems inconsistent with liberty, and those who command appear to do the very opposite of that which the fundamental idea of the State, viz. that of Freedom, requires. It is, however, urged that,—though the distinction between commanding and obeying is absolutely necessary, because affairs could not go on without it—and indeed this seems only a compulsory limitation, external to and even contravening freedom in the abstract—the constitution should be at least so framed, that the citizens may obey as little as possible, and the smallest modicum of free volition be left to the commands of the superiors;—that the substance of that for which subordination is necessary, even in its most important bearings, should be decided and resolved on by the People—by the will of many or of all the citizens; though it is supposed to be thereby provided that the State should be possessed of vigour and strength as a reality—an individual unity.—The primary consideration is, then, the distinction between the governing and the governed, and political constitutions in the abstract have been rightly divided into Monarchy, Aristocracy, and Democracy; which gives occasion, however, to the remark that Monarchy itself must be further divided into Despotism and Monarchy proper; that in all the divisions to which the leading Idea gives rise, only the generic character is to be made prominent,—it being not intended thereby that the particular category under review should be exhausted as a Form, Order, or Kind in its *concrete* development. But especially it must be observed, that the above-mentioned divisions admit of a multitude of particular modifications,—not only such as lie within the limits of those classes themselves,—but also such as are mixtures of several of these essentially distinct classes, and which are consequently misshapen, un-

stable, and inconsistent forms. In such a collision, the concerning question is, what is the *best constitution*; that is, by what arrangement, organization, or mechanism of the power of the State its object can be most surely attained. This object may indeed be variously understood; for instance, as the calm enjoyment of life on the part of the citizens, or as Universal Happiness. Such aims have suggested the so-called Ideals of Constitutions, and,—as a particular branch of the subject,—Ideals of the Education of Princes (Fenelon), or of the governing body—the aristocracy at large (Plato); for the chief point they treat of is the condition of those subjects who stand at the head of affairs; and in these Ideals the concrete details of political organization are not at all considered. The inquiry into the best constitution is frequently treated as if not only the theory were an affair of subjective independent conviction, but as if the introduction of a constitution recognized as the best,—or as superior to others,—could be the result of a resolve adopted in this theoretical manner; as if the form of a constitution were a matter of free choice, determined by nothing else but reflection. Of this artless fashion was that deliberation,—not indeed of the Persian *people*, but of the Persian *grandees*, who had conspired to overthrow the pseudo-Smerdis and the Magi, after their undertaking had succeeded, and when there was no scion of the royal family living,—as to what constitution they should introduce into Persia; and Herodotus gives an equally naïve account of this deliberation.

In the present day, the Constitution of a country and people is not represented as so entirely dependent on free and deliberate choice. The fundamental but abstractly (and therefore imperfectly) entertained conception of Freedom, has resulted in the Republic being very generally regarded—in *theory*—as the only just and true political constitution. Many even, who occupy elevated official positions under monarchical constitutions—so far from being opposed to this idea—are actually its supporters; only they see that such a constitution, though the best, cannot be realized under all circumstances; and that—while men are what they are—we must be satisfied

with less freedom; the monarchical constitution—under the given circumstances, and the present moral condition of the people—being even regarded as the most advantageous. In this view also, the necessity of a particular constitution is made to depend on the condition of the people in such a way as if the latter were non-essential and accidental. This representation is founded on the distinction which the reflective understanding makes between an idea and the corresponding reality; holding to an abstract and consequently untrue idea; not grasping it in its completeness, or—which is virtually, though not in point of form, the same,—not taking a concrete view of a people and a state. We shall have to shew further on, that the constitution adopted by a people makes one substance—one spirit—with its religion, its art and philosophy, or, at least, with its conceptions and thoughts—its culture generally; not to expatiate upon the additional influences, *ab extrâ*, of climate, of neighbours, of its place in the World. A State is an individual totality, of which you cannot select any particular side, although a supremely important one, such as its political constitution; and deliberate and decide respecting it in that isolated form. Not only is that constitution most intimately connected with and dependent on those other spiritual forces; but the form of the entire moral and intellectual individuality—comprising all the forces it embodies—is only a step in the development of the grand Whole,—with its place preappointed in the process; a fact which gives the highest sanction to the constitution in question, and establishes its absolute necessity.—The origin of a state involves imperious lordship on the one hand, instinctive submission on the other. But even obedience—lordly power, and the fear inspired by a ruler—in itself implies some degree of voluntary connection. Even in barbarous states this is the case; it is not the isolated will of individuals that prevails; individual pretensions are relinquished, and the general will is the essential bond of political union. This unity of the general and the particular is the Idea itself, manifesting itself as a *state*, and which subsequently undergoes further development within itself. The abstract yet necessitated process in the develop-

ment of truly independent states is as follows:—They begin with regal power, whether of patriarchal or military origin. In the next phase, particularity and individuality assert themselves in the form of Aristocracy and Democracy. Lastly, we have the subjection of these separate interests to a single power; but which can be absolutely none other than one outside of which those spheres have an independent position, viz. the Monarchical. Two phases of royalty, therefore, must be distinguished,—a primary and a secondary one. This process is necessitated, so that the form of government assigned to a particular stage of development *must* present itself: it is therefore no matter of choice, but is that form which is adapted to the spirit of the people.

In a Constitution the main feature of interest is the self development of the *rational*, that is, the *political* condition of a people; the setting free of the successive elements of the Idea: so that the several powers in the State manifest themselves as separate,—attain their appropriate and special perfection,—and yet in this independent condition, work together for one object, and are held together by it—*i.e.* form an organic whole. The State is thus the embodiment of rational freedom, realizing and recognizing itself in an objective form. For its objectivity consists in this,—that its successive stages are not merely ideal, but are present in an appropriate reality; and that in their separate and several working, they are absolutely merged in that agency by which the totality—the soul—the individuate unity—is produced, and of which it is the result.

The State is the Idea of Spirit in the external manifestation of human Will and its Freedom. It is to the State, therefore, that change in the aspect of History indissolubly attaches itself; and the successive phases of the Idea manifest themselves in it as distinct political *principles*. The Constitutions under which World-Historical peoples have reached their culmination, are peculiar to them; and therefore do not present a generally applicable political basis. Were it otherwise, the differences of similar constitutions would consist only in a peculiar method of expanding and developing that generic

basis; whereas they really originate in diversity of principle. From the comparison therefore of the political institutions of the ancient World-Historical peoples, it so happens, that for the most recent principle of a Constitution—for the principle of our own times—nothing (so to speak) can be learned. In science and art it is quite otherwise; *e.g.*, the ancient philosophy is so decidedly the basis of the modern, that it is inevitably contained in the latter, and constitutes its basis. In this case the relation is that of a continuous development of the same structure, whose foundation-stone, walls, and roof have remained what they were. In Art, the Greek itself, in its original form, furnishes us the best models. But in regard to political constitution, it is quite otherwise: here the Ancient and the Modern have not their essential principle in common. Abstract definitions and dogmas respecting just government,—importing that intelligence and virtue ought to bear sway—are, indeed, common to both. But nothing is so absurd as to look to Greeks, Romans, or Orientals, for models for the political arrangements of our time. From the East may be derived beautiful pictures of a patriarchal condition, of paternal government, and of devotion to it on the part of peoples; from Greeks and Romans, descriptions of popular liberty. Among the latter we find the idea of a Free Constitution admitting all the citizens to a share in deliberations and resolves respecting the affairs and laws of the Commonwealth. In our times, too, this is its general acceptance; only with this modification, that—since our states are so large, and there are so many of “the Many,” the latter,—direct action being impossible,—should by the indirect method of elective substitution express their concurrence with resolves affecting the common weal; that is, that for legislative purposes generally, the people should be represented by deputies. The so-called Representative Constitution is that form of government with which we connect the idea of a free constitution; and this notion has become a rooted prejudice. On this theory People and Government are separated. But there is a perversity in this antithesis; an ill-intentioned *ruse* designed to insinuate that the People are the totality of the State. Besides,

the basis of this view is the principle of isolated individuality—the absolute validity of the subjective will—a dogma which we have already investigated. The great point is, that Freedom in its Ideal conception has not subjective will and caprice for its principle, but the recognition of the universal will; and that the process by which Freedom is realized is the free development of its successive stages. The subjective will is a merely formal determination—a *carte blanche*—not including what it is that is willed. Only the *rational* will is that universal principle which independently determines and unfolds its own being, and develops its successive elemental phases as organic members. Of this Gothic-cathedral architecture the ancients knew nothing.

At an earlier stage of the discussion we established the two elemental considerations: first, the *idea* of freedom as the absolute and final aim; secondly, the *means* for realizing it, *i.e.* the subjective side of knowledge and will, with its life, movement, and activity. We then recognized the State as the moral Whole and the Reality of Freedom, and consequently as the objective unity of these two elements. For although we make this distinction into two aspects for our consideration, it must be remarked that they are intimately connected; and that their connection is involved in the idea of each when examined separately. We have, on the one hand, recognized the Idea in the definite form of Freedom conscious of and willing itself,—having itself alone as its object: involving at the same time, the pure and simple Idea of Reason, and likewise, that which we have called subject—self-consciousness—Spirit actually existing in the World. If, on the other hand, we consider Subjectivity, we find that subjective knowledge and will is Thought. But by the very act of thoughtful cognition and volition, I will the universal object—the substance of absolute Reason. We observe, therefore, an essential union between the objective side—the Idea,—and the subjective side—the personality that conceives and wills it.—The *objective* existence of this union is the State, which is therefore the basis and centre of the other concrete elements of the life of a people,—of Art, of Law, of Morals, of Religion, of Science.

All the activity of Spirit has only this object—the becoming conscious of this union, *i. e.*, of its own Freedom. Among the forms of this conscious union *Religion* occupies the highest position. In it, Spirit—rising above the limitations of temporal and secular existence—becomes conscious of the Absolute Spirit, and in this consciousness of the self-existent Being, renounces its individual interest; it lays this aside in Devotion—a state of mind in which it refuses to occupy itself any longer with the limited and particular. By Sacrifice man expresses his renunciation of his property, his will, his individual feelings. The religious concentration of the soul appears in the form of feeling; it nevertheless passes also into reflection; a form of worship (*cultus*) is a result of reflection. The second form of the union of the objective and subjective in the human spirit is *Art*. This advances farther into the realm of the actual and sensuous than Religion. In its noblest walk it is occupied with representing, not indeed, the Spirit of God, but certainly the Form of God; and in its secondary aims, that which is divine and spiritual generally. Its office is to render visible the Divine; presenting it to the imaginative and intuitive faculty. But the True is the object not only of conception and feeling, as in Religion,—and of intuition, as in Art,—but also of the thinking faculty; and this gives us the third form of the union in question—*Philosophy*. This is consequently the highest, freest, and wisest phase. Of course we are not intending to investigate these three phases here; they have only suggested themselves in virtue of their occupying the same general ground as the object here considered—the *State*.

The general principle which manifests itself and becomes an object of consciousness in the State,—the form under which all that the State includes is brought,—is the whole of that cycle of phenomena which constitutes the *culture* of a nation. But the definite *substance* that receives the form of universality, and exists in that concrete reality which is the State,—is the Spirit of the People itself. The actual State is animated by this spirit, in all its particular affairs—its Wars, Institutions,

&c. But man must also attain a conscious realization of this his Spirit and essential nature, and of his original identity with it. For we said that morality is the identity of the *subjective* or *personal* with the *universal* will. Now the mind must give itself an express consciousness of this; and the focus of this knowledge is *Religion*. Art and Science are only various aspects and forms of the same substantial being.—In considering Religion, the chief point of enquiry is, whether it recognizes the True—the Idea—only in its separate, abstract form, or in its true unity; in *separation*—God being represented in an abstract form as the Highest Being, Lord of Heaven and Earth, living in a remote region far from human actualities,—or in its *unity*,—God, as Unity of the Universal and Individual; the Individual itself assuming the aspect of positive and real existence in the idea of the Incarnation. Religion is the sphere in which a nation gives itself the definition of that which it regards as the True. A definition contains everything that belongs to the essence of an object; reducing its nature to its simple characteristic predicate, as a mirror for every predicate,—the generic soul pervading all its details. The conception of God, therefore, constitutes the general basis of a people's character.

In this aspect, religion stands in the closest connection with the political principle. Freedom can exist only where Individuality is recognized as having its positive and real existence in the Divine Being. The connection may be further explained thus:—Secular existence, as merely temporal—occupied with particular interests—is consequently only relative and unauthorized; and receives its validity only in as far as the universal soul that pervades it—its principle—receives absolute validity; which it cannot have unless it is recognized as the definite manifestation, the phenomenal existence of the Divine Essence. On this account it is that the State rests on Religion. We hear this often repeated in our times, though for the most part nothing further is meant than that individual subjects as God-fearing men would be more disposed and ready to perform their duty; since obedience to King and

Law so naturally follows in the train of reverence for God. This reverence, indeed, since it exalts the general over the special, may even turn upon the latter,—become fanatical,—and work with incendiary and destructive violence against the State, its institutions, and arrangements. Religious feeling, therefore, it is thought, should be sober,—kept in a certain degree of coolness,—that it may not storm against and bear down that which should be defended and preserved by it. The possibility of such a catastrophe is at least latent in it.

While, however, the correct sentiment is adopted, that the State is based on Religion, the position thus assigned to Religion supposes the State already to exist; and that subsequently, in order to maintain it, Religion must be brought into it—in buckets and bushels as it were—and impressed upon people's hearts. It is quite true that men must be trained to religion, but not as to something whose existence has yet to begin. For in affirming that the State is based on Religion—that it has its roots in it—we virtually assert that the former has proceeded from the latter; and that this derivation is going on now and will always continue; *i.e.*, the principles of the State must be regarded as valid in and for themselves, which can only be in so far as they are recognized as determinate manifestations of the Divine Nature. The form of Religion, therefore, decides that of the State and its constitution. The latter actually originated in the particular religion adopted by the nation; so that, in fact, the Athenian or the Roman State was possible only in connection with the specific form of Heathenism existing among the respective peoples; just as a Catholic State has a spirit and constitution different from that of a Protestant one.

If that outcry—that urging and striving for the implantation of Religion in the community—were an utterance of anguish and a call for help, as it often seems to be, expressing the danger of religion having vanished, or being about to vanish entirely from the State,—that would be fearful indeed,—worse, in fact, than this outcry supposes; for it implies the belief in a resource against the evil, *viz.*, the implantation and inculcation of religion; whereas religion is by no means a

thing to be so produced; its *self-production* (and there can be no other) lies much deeper.

Another and opposite folly which we meet with in our time, is that of pretending to invent and carry out political constitutions independently of religion. The Catholic confession, although sharing the Christian name with the Protestant, does not concede to the State an inherent Justice and Morality,—a concession which in the Protestant principle is fundamental. This tearing away of the political morality of the Constitution from its natural connection, is necessary to the genius of that religion, inasmuch as it does not recognize Justice and Morality as independent and substantial. But thus excluded from intrinsic worth,—torn away from their last refuge—the sanctuary of conscience—the calm retreat where religion has its abode,—the principles and institutions of political legislation are destitute of a real centre, to the same degree as they are compelled to remain abstract and indefinite.

Summing up what has been said of the State, we find that we have been led to call its vital principle, as actuating the individuals who compose it,—Morality. The State, its laws, its arrangements, constitute the rights of its members; its natural features, its mountains, air, and waters, are *their* country, their fatherland, their outward material property; the history of this State, *their* deeds; what their ancestors have produced, belongs to them and lives in their memory. All is their possession, just as they are possessed by it; for it constitutes their existence, their being.

Their imagination is occupied with the ideas thus presented, while the adoption of these laws, and of a fatherland so conditioned is the expression of their will. It is this matured totality which thus constitutes *one* Being, the spirit of *one* People. To it the individual members belong; each unit is the Son of his Nation, and at the same time—in as far as the State to which he belongs is undergoing development—the Son of his Age. None remains behind it, still less advances beyond it. This spiritual Being (the Spirit of his Time) is his; he is a representative of it; it is that in which he originated, and in which he lives. Among the Athenians the word Athens

had a double import; suggesting primarily, a complex of political institutions, but no less, in the second place, that Goddess who represented the Spirit of the People and its unity.

This Spirit of a People is a *determinate* and particular Spirit, and is, as just stated, further modified by the degree of its historical development. This Spirit, then, constitutes the basis and substance of those other forms of a nation's consciousness, which have been noticed. For Spirit in its self-consciousness must become an object of contemplation to itself, and objectivity involves, in the first instance, the rise of differences which make up a total of distinct spheres of objective spirit; in the same way as the Soul exists only as the complex of its faculties, which in their form of concentration in a simple unity produce that Soul. It is thus *One Individuality* which, presented in its essence as God, is honoured and enjoyed in *Religion*; which is exhibited as an object of sensuous contemplation in *Art*; and is apprehended as an intellectual conception, in *Philosophy*. In virtue of the original identity of their essence, purport, and object, these various forms are inseparably united with the Spirit of the State. Only in connection with this particular religion, can this particular political constitution exist; just as in such or such a State, such or such a Philosophy or order of Art.

The remark next in order is, that each particular National genius is to be treated as only One Individual in the process of Universal History. For that history is the exhibition of the divine, absolute development of Spirit in its highest forms,—that gradation by which it attains its truth and consciousness of itself. The forms which these grades of progress assume are the characteristic "National Spirits" of History; the peculiar tenor of their moral life, of their Government, their Art, Religion, and Science. To realize these grades is the boundless impulse of the World-Spirit—the goal of its irresistible urging; for this division into organic members, and the full development of each, is its Idea.—Universal History is exclusively occupied with shewing how Spirit comes to a recognition and adoption of the Truth: the dawn of knowl-

edge appears; it begins to discover salient principles, and at last it arrives at full consciousness.

Having, therefore, learned the abstract characteristics of the nature of Spirit, the means which it uses to realize its Idea, and the shape assumed by it in its complete realization in phenomenal existence—namely, the State—nothing further remains for this introductory section to contemplate but

The course of the World's History. The mutations which history presents have been long characterized in the general, as an advance to something better, more perfect. The changes that take place in Nature—how infinitely manifold soever they may be—exhibit only a perpetually self-repeating cycle; in Nature there happens “nothing new under the sun,” and the multiform play of its phenomena so far induces a feeling of *ennui*; only in those changes which take place in the region of Spirit does anything new arise. This peculiarity in the world of mind has indicated in the case of man an altogether different destiny from that of merely natural objects—in which we find always one and the same stable character, to which all change reverts;—namely, a *real* capacity for change, and that for the better,—an impulse of *perfectibility*. This principle, which reduces change itself under a law, has met with an unfavourable reception from religions—such as the Catholic—and from States claiming as their just right a stereotyped, or at least a stable position. If the mutability of worldly things in general—political constitutions, for instance—is conceded, either Religion (as the Religion of *Truth*) is absolutely excepted, or the difficulty escaped by ascribing changes, revolutions, and abrogations of immaculate theories and institutions, to accidents or imprudence,—but principally to the levity and evil passions of man. The principle of Perfectibility indeed is almost as indefinite a term as mutability in general; it is without scope or goal, and has no standard by which to estimate the changes in question: the improved, more perfect, state of things towards which it professedly tends is altogether undetermined.

The principle of *Development* involves also the existence of a latent germ of being—a capacity or potentiality striving to realise itself. This formal conception finds actual existence in Spirit; which has the History of the World for its theatre, its possession, and the sphere of its realization. It is not of such a nature as to be tossed to and fro amid the superficial play of accidents, but is rather the absolute arbiter of things; entirely unmoved by contingencies, which, indeed, it applies and manages for its own purposes. Development, however, is also a property of organized natural objects. Their existence presents itself, not as an exclusively dependent one, subjected to external changes, but as one which expands itself in virtue of an internal unchangeable principle; a simple essence,—whose existence, *i. e.*, as a germ, is primarily simple,—but which subsequently develops a variety of parts, that become involved with other objects, and consequently live through a continuous process of changes;—a process nevertheless, that results in the very contrary of change, and is even transformed into a *vis conservatrix* of the organic principle, and the form embodying it. Thus the organized *individuum* produces itself; it expands itself *actually* to what it was always *potentially*.—So Spirit is only that which it attains by its own efforts; it makes itself *actually* what it always was *potentially*.—That development (of *natural organisms*) takes place in a direct, unopposed, unhindered manner. Between the Idea and its realization—the essential constitution of the original germ and the conformity to it of the existence derived from it—no disturbing influence can intrude. But in relation to Spirit it is quite otherwise. The realization of *its* Idea is mediated by consciousness and will; these very faculties are, in the first instance, sunk in their primary *merely* natural life; the first object and goal of their striving is the realization of their merely natural destiny,—but which, since it is Spirit that animates it, is possessed of vast attractions and displays great power and [moral] richness. Thus Spirit is at war with itself; it has to overcome itself as its most formidable obstacle. That development which in the sphere of Nature is a peaceful growth, is in that of Spirit, a severe, a mighty conflict with

itself. What Spirit really strives for is the realization of its Ideal being; but in doing so, it hides that goal from its own vision, and is proud and well satisfied in this alienation from it.

Its expansion, therefore, does not present the harmless tranquillity of mere growth, as does that of organic life, but a stern reluctant working against itself. It exhibits, moreover, not the mere formal conception of development, but the attainment of a definite result. The goal of attainment we determined at the outset: it is Spirit in its *completeness*, in its essential nature, *i. e.*, Freedom. This is the fundamental object, and therefore also the leading principle of the development,—that whereby it receives meaning and importance (as in the Roman history, Rome is the object—consequently that which directs our consideration of the facts related); as, conversely, the phenomena of the process have resulted from this principle alone, and only as referred to it, possess a sense and value. There are many considerable periods in History in which this development seems to have been intermitted; in which, we might rather say, the whole enormous gain of previous culture appears to have been entirely lost; after which, unhappily, a new commencement has been necessary, made in the hope of recovering—by the assistance of some remains saved from the wreck of a former civilization, and by dint of a renewed incalculable expenditure of strength and time,—one of the regions which had been an ancient possession of that civilization. We behold also *continued* processes of growth; structures and systems of culture in particular spheres, rich in kind, and well developed in every direction. The merely formal and indeterminate view of development in general can neither assign to one form of expansion superiority over the other, nor render comprehensible the object of that decay of older periods of growth; but must regard such occurrences,—or, to speak more particularly, the retrocessions they exhibit,—as external contingencies; and can only judge of particular modes of development from indeterminate points of view; which—since the development as such, is all in all—are relative and not absolute goals of attainment.

Universal History exhibits the *gradation* in the develop-

ment of that principle whose substantial *purport* is the consciousness of Freedom. The analysis of the successive grades, in their abstract form, belongs to Logic; in their concrete aspect to the Philosophy of Spirit. Here it is sufficient to state that the first step in the process presents that immersion of Spirit in Nature which has been already referred to; the second shows it as advancing to the consciousness of its freedom. But this initial separation from Nature is imperfect and partial, since it is derived immediately from the merely natural state, is consequently related to it, and is still encumbered with it as an essentially connected element. The third step is the elevation of the soul from this still limited and special form of freedom to its pure universal form; that state in which the spiritual essence attains the consciousness and feeling of itself. These grades are the ground-principles of the general process; but how each of them on the other hand involves within *itself* a process of formation,—constituting the links in a dialectic of transition,—to particularise this must be reserved for the sequel.

Here we have only to indicate that Spirit begins with a germ of infinite possibility, but *only* possibility,—containing its substantial existence in an undeveloped form, as the object and goal which it reaches only in its resultant—full reality. In actual existence Progress appears as an advancing from the imperfect to the more perfect; but the former must not be understood abstractly as *only* the imperfect, but as something which involves the very opposite of itself—the so-called perfect—as a *germ* or impulse. So—reflectively, at least—*possibility* points to something destined to become actual; the Aristotelian *δύναμις* is also *potentia*, power and might. Thus the Imperfect, as involving its opposite, is a contradiction, which certainly exists, but which is continually annulled and solved; the instinctive movement—the inherent impulse in the life of the soul—to break through the rind of mere nature, sensuousness, and that which is alien to it, and to attain to the light of consciousness, *i. e.* to itself.

We have already made the remark how the commencement of the history of Spirit must be conceived so as to be in har-

mony with its Idea—in its bearing on the representations that have been made of a primitive “*natural condition*,” in which freedom and justice are supposed to exist, or to have existed. This was, however, nothing more than an assumption of historical existence, conceived in the twilight of theorising reflection. A pretension of quite another order,—not a mere inference of reasoning, but making the claim of historical fact, and that supernaturally confirmed,—is put forth in connection with a different view that is now widely promulgated by a certain class of speculatists. This view takes up the idea of the primitive paradisiacal condition of man, which had been previously expanded by the Theologians, after their fashion,—involving, *e. g.*, the supposition that God spoke with Adam in Hebrew,—but re-modelled to suit other requirements. The high authority appealed to in the first instance is the biblical narrative. But this depicts the primitive condition, partly only in the few well-known traits, but partly either as in man generically,—human nature at large,—or, so far as Adam is to be taken as an individual, and consequently one person,—as existing and completed in *this one*, or *only in one* human pair. The biblical account by no means justifies us in imagining a *people*, and an historical condition of such people, existing in that primitive form; still less does it warrant us in attributing to them the possession of a perfectly developed knowledge of God and Nature. “Nature,” so the fiction runs, “like a clear mirror of God’s creation, had originally lain revealed and transparent to the unclouded eye of man.”¹ Divine Truth is imagined to have been equally manifest. It is even hinted, though left in some degree of obscurity, that in this primary condition men were in possession of an indefinitely extended and already expanded body of religious truths immediately revealed by God. This theory affirms that all religions had their historical commencement in this primitive knowledge, and that they polluted and obscured the original Truth by the monstrous creations of error and depravity;

¹ Fr. von Schlegel, “Philosophy of History,” p. 91, Bohn’s Standard Library.

though in all the mythologies invented by Error, traces of that origin and of those primitive true dogmas are supposed to be present and cognizable. An important interest, therefore, accrues to the investigation of the history of ancient peoples, that, viz., of the endeavour to trace their annals up to the point where such fragments of the primary revelation are to be met with in greater purity than lower down.²

We owe to the interest which has occasioned these investigations, very much that is valuable; but this investigation bears direct testimony against itself, for it would seem to be

² We have to thank this interest for many valuable discoveries in Oriental literature, and for a renewed study of treasures previously known, in the department of ancient Asiatic Culture, Mythology, Religions, and History. In Catholic countries, where a refined literary taste prevails, Governments have yielded to the requirements of speculative inquiry, and have felt the necessity of allying themselves with learning and philosophy. Eloquently and impressively has the Abbé Lamennais reckoned it among the criteria of the true religion, that it must be the universal—that is, catholic—and the oldest in date; and the Congregation has laboured zealously and diligently in France towards rendering such assertions no longer mere pulpit tirades and authoritative dicta, such as were deemed sufficient formerly. The religion of Buddha—a god-man—which has prevailed to such an enormous extent, has especially attracted attention. The Indian Timûrtis, as also the Chinese abstraction of the Trinity, has furnished clearer evidence in point of subject matter. The savans, M. Abel Remusat and M. Saint Martin, on the one hand, have undertaken the most meritorious investigations in the Chinese literature, with a view to make this also a base of operations for researches in the Mongolian and, if such were possible, in the Thibetian; on the other hand, Baron von Eckstein, in his way (*i. e.*, adopting from Germany superficial physical conceptions and mannerisms, in the style of Fr. v. Schlegel, though with more geniality than the latter) in his periodical, “Le Catholique,”—has furthered the cause of that primitive Catholicism generally, and in particular has gained for the savans of the Congregation the support of the Government; so that it has even set on foot expeditions to the East, in order to discover there treasures still concealed; (from which further disclosures have been anticipated, respecting profound theological questions, particularly on the higher antiquity and sources of Buddhism), and with a view to promote the interests of Catholicism by this circuitous but scientifically interesting method.

awaiting the issue of an historical demonstration of that which is presupposed by it as historically established. That advanced condition of the knowledge of God, and of other scientific, e. g. astronomical knowledge (such as has been falsely attributed to the Hindoos); and the assertion that such a condition occurred at the very beginning of History,—or that the religions of various nations were traditionally derived from it, and have developed themselves in degeneracy and depravation (as is represented in the rudely-conceived so-called "Emanation System,"); all these are suppositions which neither have, nor,—if we may contrast with their arbitrary subjective origin, the true conception of History,—can attain historical confirmation.

The only consistent and worthy method which philosophical investigation can adopt, is to take up History where Rationality begins to manifest itself in the actual conduct of the World's affairs (not where it is merely an undeveloped potentiality),—where a condition of things is present in which it realizes itself in consciousness, will and action. The inorganic existence of Spirit—that of abstract Freedom—unconscious *torpidity* in respect to good and evil (and consequently to laws), or, if we please to term it so, "blessed ignorance,"—is itself not a subject of History. *Natural*, and at the same time *religious* morality, is the piety of the *family*. In this social relation, morality consists in the members behaving towards each other *not as individuals*—possessing an independent will; not as persons. The Family therefore, is excluded from that process of development in which History takes its rise. But when this self-involved spiritual Unity steps beyond this circle of feeling and natural love, and first attains the consciousness of personality, we have that dark, dull centre of indifference, in which neither Nature nor Spirit is open and transparent; and for which Nature and Spirit can become open and transparent only by means of a further process,—a very lengthened culture of that Will at length become self-conscious. Consciousness alone is clearness; and is that alone for which God (or any other existence) can be revealed. In its true form,—in absolute universality—nothing

can be manifested except to consciousness made percipient of it. Freedom is nothing but the recognition and adoption of such universal substantial objects as Right and Law, and the production of a reality that is accordant with them—the State. Nations may have passed a long life before arriving at this their destination, and during this period, they may have attained considerable culture in some directions. This ante-historical period—consistently with what has been said—lies out of our plan; whether a real history followed it, or the peoples in question never attained a political constitution.—It is a great discovery in history—as of a new world—which has been made within rather more than the last twenty years, respecting the Sanscrit and the connection of the European languages with it. In particular, the connection of the German and Indian peoples has been demonstrated, with as much certainty as such subjects allow of. Even at the present time we know of peoples which scarcely form a society, much less a State, but that have been long known as existing; while with regard to others, which in their advanced condition excite our especial interest, tradition reaches beyond the record of the founding of the State, and they experienced many changes prior to that epoch. In the connection just referred to, between the languages of nations so widely separated, we have a result before us, which proves the diffusion of those nations from Asia as a centre, and the so dissimilar development of what had been originally related, as an incontestable fact; not as an inference deduced by that favourite method of combining, and reasoning from, circumstances grave and trivial, which has already enriched and will continue to enrich history with so many fictions given out as facts. But that apparently so extensive range of events lies beyond the pale of history; in fact preceded it.

In our language the term *History*³ unites the objective with the subjective side, and denotes quite as much the *historia rerum gestarum*, as the *res gestæ* themselves; on the other hand it comprehends not less what has *happened*, than the

³ German, "Geschichte" from "Geschehen," to happen. Tr.

narration of what has happened. This union of the two meanings we must regard as of a higher order than mere outward accident; we must suppose historical narrations to have appeared contemporaneously with historical deeds and events. It is an internal vital principle common to both that produces them synchronously. Family memorials, patriarchal traditions, have an interest confined to the family and the clan. The uniform course of events which such a condition implies, is no subject of serious remembrance; though distinct transactions or turns of fortune, may rouse Mnemosyne to form conceptions of them,—in the same way as love and the religious emotions provoke imagination to give shape to a previously formless impulse. But it is the State which first presents subject-matter that is not only *adapted* to the prose of History, but involves the production of such history in the very progress of its own being. Instead of merely subjective mandates on the part of government,—sufficing for the needs of the moment,—a community that is acquiring a stable existence, and exalting itself into a State, requires formal commands and laws—comprehensive and universally binding prescriptions; and thus produces a record as well as an interest concerned with intelligent, definite—and, in their results—lasting transactions and occurrences; on which Mnemosyne, for the behoof of the perennial object of the formation and constitution of the State, is impelled to confer perpetuity. Profound sentiments generally, such as that of love, as also religious intuition and its conceptions, are in themselves complete,—constantly present and satisfying; but that outward existence of a political constitution which is enshrined in its rational laws and customs, is an *imperfect* Present; and cannot be thoroughly understood without a knowledge of the past.

The periods—whether we suppose them to be centuries or millennia—that were passed by nations before history was written among them,—and which may have been filled with revolutions, nomadic wanderings, and the strangest mutations,—are on that very account destitute of *objective* history, because they present no *subjective* history, no annals. We need not suppose that the records of such periods have acci-

dentally perished; rather, because they were not possible, do we find them wanting. Only in a State cognizant of Laws, can distinct transactions take place, accompanied by such a clear consciousness of them as supplies the ability and suggests the necessity of an enduring record. It strikes every one, in beginning to form an acquaintance with the treasures of Indian literature, that a land so rich in intellectual products, and those of the profoundest order of thought, has no History; and in this respect contrasts most strongly with China—an empire possessing one so remarkable, one going back to the most ancient times. India has not only ancient books relating to religion, and splendid poetical productions, but also ancient codes; the existence of which latter kind of literature has been mentioned as a condition necessary to the origination of History—and yet History itself is not found. But in that country the impulse of organization, in beginning to develop social distinctions, was immediately petrified in the merely natural classification according to *castes*; so that although the laws concern themselves with civil rights, they make even these dependent on natural distinctions; and are especially occupied with determining the relations (Wrongs rather than Rights) of those classes towards each other, *i.e.* the privileges of the higher over the lower. Consequently, the element of morality is banished from the pomp of Indian life and from its political institutions. Where that iron bondage of distinctions derived from nature prevails, the connection of society is nothing but wild arbitrariness,—transient activity,—or rather the play of violent emotion without any goal of advancement or development. Therefore no intelligent reminiscence, no object for Mnemosyne presents itself; and imagination—confused though profound—expatiates in a region, which, to be capable of History, must have had an aim within the domain of Reality, and, at the same time, of substantial Freedom.

Since such are the conditions indispensable to a history, it has happened that the growth of Families to Clans, of Clans to Peoples, and their local diffusion consequent upon this numerical increase,—a series of facts which itself suggests so

many instances of social complication, war, revolution, and ruin,—a process which is so rich in interest, and so comprehensive in extent,—has occurred without giving rise to History: moreover, that the extension and organic growth of the empire of articulate sounds has itself remained voiceless and dumb,—a stealthy, unnoticed advance. It is a fact revealed by philological monuments, that languages, during a rude condition of the nations that have spoken them, have been very highly developed; that the human understanding occupied this theoretical region with great ingenuity and completeness. For Grammar, in its extended and consistent form, is the work of thought, which makes its categories distinctly visible therein. It is, moreover, a fact, that with advancing social and political civilization, this systematic completeness of intelligence suffers attrition, and language thereupon becomes poorer and ruder: a singular phenomenon—that the progress towards a more highly intellectual condition, while expanding and cultivating rationality, should disregard that intelligent amplitude and expressiveness—should find it an obstruction and contrive to do without it. Speech is the act of theoretic intelligence in a special sense; it is its *external* manifestation. Exercises of memory and imagination without language, are direct, [non-speculative] manifestations. But this act of theoretic intelligence itself, as also its subsequent development, and the more concrete class of facts connected with it,—viz. the spreading of peoples over the earth, their separation from each other, their comminglings and wanderings—remain involved in the obscurity of a voiceless past. They are not acts of Will becoming self-conscious—of Freedom, mirroring itself in a phenomenal form, and creating for itself a proper reality. Not partaking of this element of substantial, veritable existence, those nations—notwithstanding the development of language among them—never advanced to the possession of a *history*. The rapid growth of language, and the progress and dispersion of Nations, assume importance and interest for concrete Reason, only when they have come in contact with States, or begin to form political constitutions themselves.

After these remarks, relating to the form of the *commencement* of the World's History, and to that ante-historical period which must be excluded from it, we have to state the direction of its course: though here only formally. The further definition of the subject in the concrete, comes under the head of arrangement.

Universal history—as already demonstrated—shews the development of the consciousness of Freedom on the part of Spirit, and of the consequent realization of that Freedom. This development implies a gradation—a series of increasingly adequate expressions or manifestations of Freedom, which result from its Idea. The logical, and—as still more prominent—the *dialectical* nature of the Idea in general, viz. that it is self-determined—that it assumes successive forms which it successively transcends; and by this very process of transcending its earlier stages, gains an affirmative, and, in fact, a richer and more concrete shape;—this necessity of its nature, and the necessary series of pure abstract forms which the Idea successively assumes—is exhibited in the department of *Logic*. Here we need adopt only one of its results, viz. that every step in the process, as differing from any other, has its determinate peculiar principle. In history this principle is idiosyncrasy of Spirit—peculiar National Genius. It is within the limitations of this idiosyncrasy that the spirit of the nation, concretely manifested, expresses every aspect of its consciousness and will—the whole cycle of its realization. Its religion, its polity, its ethics, its legislation, and even its science, art, and mechanical skill, all bear its stamp. These special peculiarities find their key in that common peculiarity,—the particular principle that characterises a people; as, on the other hand, in the facts which History presents in detail, that common characteristic principle may be detected. That such or such a specific quality constitutes the peculiar genius of a people, is the element of our inquiry which must be derived from experience, and historically proved. To accomplish this, pre-supposes not only a disciplined faculty of abstraction, but an intimate acquaintance with the Idea. The investigator must be familiar *à priori* (if we like to call it so),

with the whole circle of conceptions to which the principles in question belong—just as Keppler (to name the most illustrious example in this mode of philosophizing) must have been familiar *à priori* with ellipses, with cubes and squares, and with ideas of their relations, before he could discover, from the empirical data, those immortal “Laws” of his, which are none other than forms of thought pertaining to those classes of conceptions. He who is unfamiliar with the science that embraces these abstract elementary conceptions, is as little capable—though he may have gazed on the firmament and the motions of the celestial bodies for a lifetime—of *understanding* those Laws, as of *discovering* them. From this want of acquaintance with the ideas that relate to the development of Freedom, proceed a part of those objections which are brought against the philosophical consideration of a science usually regarded as one of mere experience; the so-called *à priori* method, and the attempt to insinuate ideas into the empirical data of history, being the chief points in the indictment. Where this deficiency exists, such conceptions appear alien—not lying within the object of investigation. To minds whose training has been narrow and merely subjective,—which have not an acquaintance and familiarity with ideas,—they are something strange—not embraced in the notion and conception of the subject which their limited intellect forms. Hence the statement that Philosophy does not understand such sciences. It must, indeed, allow that it has not that kind of Understanding which is the prevailing one in the domain of those sciences that it does not proceed according to the categories of such Understanding, but according to the categories of *Reason*—though at the same time recognizing that Understanding, and its true value and position. It must be observed that in this very process of scientific *Understanding*, it is of importance that the essential should be distinguished and brought into relief in contrast with the so-called non-essential. But in order to render this possible, we must know what *is essential*; and that is—in view of the History of the World in general—the Consciousness of Freedom, and the phases which this consciousness assumes in de-

veloping itself. The bearing of historical facts on this category, is their bearing on the truly Essential. Of the difficulties stated, and the opposition exhibited to comprehensive conceptions in science, part must be referred to the inability to grasp and understand Ideas. If in Natural History some monstrous hybrid growth is alleged as an objection to the recognition of clear and indubitable classes or species, a sufficient reply is furnished by a sentiment often vaguely urged,—that “the exception confirms the rule;” *i.e.* that is the part of a well-defined rule, to shew the conditions in which it applies, or the deficiency or hybridism of cases that are abnormal. Mere Nature is too weak to keep its genera and species pure, when conflicting with alien elementary influences. If, *e.g.* on considering the human organization in its concrete aspect, we assert that brain, heart, and so forth are essential to its organic life, some miserable abortion may be adduced, which has on the whole the human form, or parts of it,—which has been conceived in a human body and has breathed after birth therefrom,—in which nevertheless no brain and no heart is found. If such an instance is quoted against the general conception of a human being—the objector persisting in using the name, coupled with a superficial idea respecting it—it can be proved that a real, concrete human being is a truly different object; that such a being must have a brain in its head, and a heart in its breast.

A similar process of reasoning is adopted, in reference to the correct assertion that genius, talent, moral virtues, and sentiments, and piety, may be found in every zone, under all political constitutions and conditions; in confirmation of which examples are forthcoming in abundance. If in this assertion, the accompanying distinctions are intended to be repudiated as unimportant or non-essential, reflection evidently limits itself to abstract categories; and ignores the specialties of the object in question, which certainly fall under no principle recognized by such categories. That intellectual position which adopts such merely formal points of view, presents a vast field for ingenious questions, erudite views, and striking comparisons; for profound seeming reflections

and declamations, which may be rendered so much the more brilliant in proportion as the subject they refer to is indefinite, and are susceptible of new and varied forms in inverse proportion to the importance of the results that can be gained from them, and the certainty and rationality of their issues. Under such an aspect the well known Indian Epopees may be compared with the Homeric; perhaps—since it is the vastness of the imagination by which poetical genius proves itself—preferred to them; as, on account of the similarity of single strokes of imagination in the attributes of the divinities, it has been contended that Greek mythological forms may be recognized in those of India. Similarly the Chinese philosophy, as adopting the One [τὸ εἷν] as its basis, has been alleged to be the same as at a later period appeared as Eleatic philosophy and as the Spinozistic System; while in virtue of its expressing itself also in abstract numbers and lines, Pythagorean and Christian principles have been supposed to be detected in it. Instances of bravery and indomitable courage,—traits of magnanimity, of self-denial, and self-sacrifice, which are found among the most savage and the most pusillanimous nations,—are regarded as sufficient to support the view that in these nations as much of social virtue and morality may be found as in the most civilized Christian states, or even more. And on this ground a doubt has been suggested whether in the progress of history and of general culture mankind have become better; whether their morality has been increased,—morality being regarded in a subjective aspect and view, as founded on what the agent holds to be right and wrong, good and evil; not on a principle which is considered to be in and for itself right and good, or a crime and evil, or on a particular religion believed to be the true one.

We may fairly decline on this occasion the task of tracing the formalism and error of such a view, and establishing the true principles of morality, or rather of social virtue in opposition to false morality. For the History of the World occupies a higher ground than that on which morality has properly its position; which is personal character,—the con-

science of individuals,—their particular will and mode of action; *these* have a value, imputation, reward or punishment proper to themselves. What the absolute aim of Spirit requires and accomplishes,—what Providence does,—transcends the obligations, and the liability to imputation and the ascription of good or bad motives, which attach to individuality in virtue of its social relations. They who on moral grounds, and consequently with noble intention, have resisted that which the advance of the Spiritual Idea makes necessary, stand higher in moral worth than those whose crimes have been turned into the means—under the direction of a superior principle—of realizing the purposes of that principle. But in such revolutions both parties generally stand within the limits of the same circle of transient and corruptible existence. Consequently it is only a formal rectitude—deserted by the living Spirit and by God—which those who stand upon ancient right and order maintain. The deeds of great men, who are the Individuals of the World's History, thus appear not only justified in view of that intrinsic result of which they were not conscious, but also from the point of view occupied by the secular moralist. But looked at from this point, moral claims that are irrelevant, must not be brought into collision with world-historical deeds and their accomplishment. The Litany of private virtues—modesty, humility, philanthropy and forbearance—must not be raised against them. The History of the World might, on principle, entirely ignore the circle within which morality and the so much talked of distinction between the moral and the politic lies—not only in abstaining from judgments, for the principles involved, and the necessary reference of the deeds in question to those principles, are a sufficient judgment of them—but in leaving Individuals quite out of view and unmentioned. What it has to record is the activity of the Spirit of Peoples, so that the individual forms which that spirit has assumed in the sphere of outward reality, might be left to the delineation of special histories.

The same kind of formalism avails itself in its peculiar manner of the indefiniteness attaching to genius, poetry, and even

philosophy; thinks equally that it finds these everywhere. We have here products of reflective thought; and it is familiarity with those general conceptions which single out and name real distinctions without fathoming the true depth of the matter,—that we call Culture. It is something merely formal, inasmuch as it aims at nothing more than the analysis of the subject, whatever it be, into its constituent parts, and the comprehension of these in their logical definitions and forms. It is not the free universality of conception necessary for making an abstract principle the object of consciousness. Such a consciousness of Thought itself, and of its forms isolated from a particular object, is Philosophy. This has, indeed, the condition of its existence in culture; that condition being the taking up of the object of thought, and at the same time clothing it with the form of universality, in such a way that the material content and the form given by the intellect are held in an inseparable state;—inseparable to such a degree that the object in question—which, by the analysis of one conception into a multitude of conceptions, is enlarged to an incalculable treasure of thought—is regarded as a merely empirical datum in whose formation thought has had no share.

But it is quite as much an act of Thought—of the Understanding in particular—to embrace in one simple conception object which of itself comprehends a concrete and large significance (as Earth, Man,—Alexander or Cæsar) and to designate it by one word,—as to *resolve* such a conception—duly to isolate in idea the conceptions which it contains, and to give them particular names. And in reference to the view which gave occasion to what has just been said, thus much will be clear,—that as reflection produces what we include under the general terms Genius, Talent, Art, Science,—formal culture on every grade of intellectual development, not only can, but must grow, and attain a mature bloom, while the grade in question is developing itself to a State, and on this basis of civilization is advancing to intelligent reflection and to general forms of thought,—as in laws, so in regard to all else. In the very association of men in a state, lies the necessity of formal culture—consequently of the rise of the sciences

and of a cultivated poetry and art generally. The arts designated "plastic," require besides, even in their technical aspect, the civilized association of men. The poetic art—which has less need of external requirements and means, and which has the element of immediate existence, the voice, as its material—steps forth with great boldness and with matured expression, even under the conditions presented by a people not yet united in a political combination; since, as remarked above, language attains on its own particular ground a high intellectual development, prior to the commencement of civilization.

Philosophy also must make its appearance where political life exists; since that in virtue of which any series of phenomena is reduced within the sphere of culture, as above stated, is the Form strictly proper to Thought; and thus for philosophy, which is nothing other than the consciousness of this form itself—the Thinking of Thinking,—the material of which its edifice is to be constructed, is already prepared by *general* culture. If in the development of the State itself, periods are necessitated which impel the soul of nobler natures to seek refuge from the Present in ideal regions,—in order to find in them that harmony with itself which it can no longer enjoy in the discordant real world, where the reflective intelligence attacks all that is holy and deep, which had been spontaneously inwrought into the religion, laws and manners of nations, and brings them down and attenuates them to abstract godless generalities,—Thought will be compelled to become Thinking Reason, with the view of effecting in its own element, the restoration of its principles from the ruin to which they had been brought.

We find then, it is true, among all world-historical peoples, poetry, plastic art, science, even philosophy; but not only is there a diversity in style and bearing generally, but still more remarkably in subject-matter; and this is a diversity of the most important kind, affecting the rationality of that subject-matter. It is useless for a pretentious æsthetic criticism to demand that our good pleasure should not be made the rule for the matter—the substantial part of their contents—and to maintain that it is the beautiful form as such, the grandeur

of the fancy, and so forth, which fine art aims at, and which must be considered and enjoyed by a liberal taste and cultivated mind. A healthy intellect does not tolerate such abstractions, and cannot assimilate productions of the kind above referred to. Granted that the Indian Epopees might be placed on a level with the Homeric, on account of a number of those qualities of form—grandeur of invention and imaginative power, liveliness of images and emotions, and beauty of diction; yet the infinite difference of matter remains; consequently one of substantial importance and involving the interest of Reason, which is immediately concerned with the consciousness of the Idea of Freedom, and its expression in individuals. There is not only a classical *form*, but a classical order of *subject-matter*; and in a work of art form and subject matter are so closely united that the former can only be classical to the extent to which the latter is so. With a fantastical, indeterminate material—and *Rule* is the essence of *Reason*—the form becomes measureless and formless, or mean and contracted. In the same way, in that comparison of the various systems of philosophy of which we have already spoken, the only point of importance is overlooked, namely, the character of that Unity which is found alike in the Chinese, the Eleatic, and the Spinozistic philosophy—the distinction between the recognition of that Unity as abstract and as concrete—concrete to the extent of being a unity in and by itself—a unity synonymous with Spirit. But that co-ordination proves that it recognizes only such an abstract unity; so that while it gives judgment respecting philosophy, it is ignorant of that very point which constitutes the interest of philosophy.

But there are also spheres which, amid all the variety that is presented in the substantial content of a particular form of culture, remain the same. The difference above mentioned in art, science, philosophy, concerns the thinking Reason and Freedom, which is the self-consciousness of the former, and which has the same one root with Thought. As it is not the brute, but only the man that thinks, he only—and only because he is a thinking being—has Freedom. His consciousness

imports this, that the individual comprehends itself as a *person*, that is, recognizes itself in its single existence as possessing universality,—as capable of abstraction from, and of surrendering all speciality; and, therefore, as inherently infinite. Consequently those spheres of intelligence which lie beyond the limits of this consciousness are a common ground among those substantial distinctions. Even morality, which is so intimately connected with the consciousness of freedom, can be very pure while that consciousness is still wanting; as far, that is to say, as it expresses duties and rights only as *objective* commands; or even as far as it remains satisfied with the merely formal elevation of the soul—the surrender of the sensual, and of all sensual motives—in a purely negative, self-denying fashion. The *Chinese* morality—since Europeans have become acquainted with it and with the writings of Confucius—has obtained the greatest praise and proportionate attention from those who are familiar with the Christian morality. There is a similar acknowledgment of the sublimity with which the *Indian* religion and poetry, (a statement that must, however, be limited to the higher kind), but especially the *Indian* philosophy, expatiate upon and demand the removal and sacrifice of sensuality. Yet both these nations are, it must be confessed, *entirely* wanting in the essential consciousness of the Idea of Freedom. To the Chinese their moral laws are just like natural laws,—external, positive commands,—claims established by force,—compulsory duties or rules of courtesy towards each other. Freedom, through which alone the essential determinations of Reason become moral sentiments, is wanting. Morality is a political affair, and its laws are administered by officers of government and legal tribunals. Their treatises upon it, (which are not law books, but are certainly addressed to the subjective will and individual disposition) read,—as do the moral writings of the Stoics,—like a string of commands stated as necessary for realizing the goal of happiness; so that it seems to be left free to men, on their part, to adopt such commands,—to observe them or not; while the conception of an abstract subject, “a wise man” [*Sapiens*] forms the culminating point among the Chinese, as also among

the Stoic moralists. Also in the Indian doctrine of the renunciation of the sensuality of desires and earthly interests, positive moral freedom is not the object and end, but the annihilation of consciousness—spiritual and even physical privation of life.

It is the concrete spirit of a people which we have distinctly to recognize, and since it is Spirit it can only be comprehended spiritually, that is, by thought. It is this alone which takes the lead in all the deeds and tendencies of that people, and which is occupied in realizing itself,—in satisfying its ideal and becoming self-conscious,—for its great business is self-production. But for spirit, the highest attainment is self-knowledge; an advance not only to the *intuition*, but to the *thought*—the clear conception of itself. This it must and is also destined to accomplish; but the accomplishment is at the same time its dissolution, and the rise of another spirit, another world-historical people, another epoch of Universal History. This transition and connection leads us to the connection of the whole—the idea of the World's History as such—which we have now to consider more closely, and of which we have to give a representation.

History in general is therefore the development of Spirit in *Time*, as Nature is the development of the Idea in *Space*.

If then we cast a glance over the World's-History generally, we see a vast picture of changes and transactions; of infinitely manifold forms of peoples, states, individuals, in un-resting succession. Everything that can enter into and interest the soul of man—all our sensibility to *goodness, beauty, and greatness*—is called into play. On every hand aims are adopted and pursued, which we recognize, whose accomplishment we desire—we hope and fear for them. In all these occurrences and changes we behold human action and suffering predominant; everywhere something akin to ourselves, and therefore everywhere something that excites our interest for or against. Sometimes it attracts us by beauty, freedom, and rich variety, sometimes by energy such as enables even vice to make itself interesting. Sometimes we see the more comprehensive mass of some general interest advancing with comparative slow-

ness, and subsequently sacrificed to an infinite complication of trifling circumstances, and so dissipated into atoms. Then, again, with a vast expenditure of power a trivial result is produced; while from what appears unimportant a tremendous issue proceeds. On every hand there is the motliest throng of events drawing us within the circle of its interest, and when one combination vanishes another immediately appears in its place.

The general thought—the category which first presents itself in this restless mutation of individuals and peoples, existing for a time and then vanishing—is that of *change* at large. The sight of the ruins of some ancient sovereignty directly leads us to contemplate this thought of change in its negative aspect. What traveller among the ruins of Carthage, of Palmyra, Persepolis, or Rome, has not been stimulated to reflections on the transiency of kingdoms and men, and to sadness at the thought of a vigorous and rich life now departed—a sadness which does not expend itself on personal losses and the uncertainty of one's own undertakings, but is a disinterested sorrow at the decay of a splendid and highly cultured national life! But the next consideration which allies itself with that of change, is, that change while it imports dissolution, involves at the same time the rise of a *new life*—that while death is the issue of life, life is also the issue of death. This is a grand conception; one which the Oriental thinkers attained, and which is perhaps the highest in their metaphysics. In the idea of *Metempsychosis* we find it evolved in its relation to individual existence; but a myth more generally known, is that of the *Phoenix* as a type of the *Life of Nature*; eternally preparing for itself its funeral pile, and consuming itself upon it; but so that from its ashes is produced the new, renovated, fresh life. But this image is only Asiatic; oriental not occidental. Spirit—consuming the envelope of its existence—does not merely pass into another envelope, nor rise rejuvenescent from the ashes of its previous form; it comes forth exalted, glorified, a purer spirit. It certainly makes war upon itself—consumes its own existence; but in this very destruction it works up that existence into a new form, and each

successive phase becomes in its turn a material, working on which it exalts itself to a new grade.

If we consider Spirit in this aspect—regarding its changes not merely as rejuvenescent transitions, *i. e.*, returns to the same form, but rather as manipulations of itself, by which it multiplies the material for future endeavours—we see it exerting itself in a variety of modes and directions; developing its powers and gratifying its desires in a variety which is inexhaustible; because every one of its creations, in which it has already found gratification, meets it anew as material, and is a new stimulus to plastic activity. The abstract conception of mere change gives place to the thought of Spirit manifesting, developing, and perfecting its powers in every direction which its manifold nature can follow. What powers it inherently possesses we learn from the variety of products and formations which it originates. In this pleasurable activity, it has to do only with itself. As involved with the conditions of mere nature—internal and external—it will indeed meet in these not only opposition and hindrance, but will often see its endeavours thereby fail; often sink under the complications in which it is entangled either by Nature or by itself. But in such case it perishes in fulfilling its own destiny and proper function, and even thus exhibits the spectacle of self-demonstration as spiritual activity.

The very essence of Spirit is activity; it realizes its potentiality—makes itself its own deed, its own work—and thus it becomes an object to itself; contemplates itself as an objective existence. Thus is it with the Spirit of a people: it is a Spirit having strictly defined characteristics, which erects itself into an objective world, that exists and persists in a particular religious form of worship, customs, constitution, and political laws,—in the whole complex of its institutions,—in the events and transactions that make up its history. That is its work—that is what this particular Nation *is*. Nations are what their deeds are. Every Englishman will say: We are the men who navigate the ocean, and have the commerce of the world; to whom the East Indies belong and their riches; who have a parliament, juries, &c.—The relation of the individual

to that Spirit is that he appropriates to himself this substantial existence; that it becomes his character and capability, enabling him to have a definite place in the world—to be *something*. For he finds the being of the people to which he belongs an already established, firm world—objectively present to him—with which he has to incorporate himself. In this its work, therefore—its world—the Spirit of the people enjoys its existence and finds its satisfaction.—A Nation is moral—virtuous—vigorous—while it is engaged in realizing its grand objects, and defends its work against external violence during the process of giving to its purposes an objective existence. The contradiction between its potential, subjective being—its inner aim and life—and its *actual* being is removed; it has attained full reality, has itself objectively present to it. But this having been attained, the activity displayed by the Spirit of the people in question is no longer needed; it has its desire. The Nation can still accomplish much in war and peace at home and abroad; but the living substantial soul itself may be said to have ceased its activity. The essential, supreme interest has consequently vanished from its life, for interest is present only where there is opposition. The nation lives the same kind of life as the individual when passing from maturity to old age,—in the enjoyment of itself,—in the satisfaction of being exactly what it desired and was able to attain. Although its imagination might have transcended that limit, it nevertheless abandoned any such aspirations as objects of *actual endeavour*, if the real world was less than favourable to their attainment,—and restricted its aim by the conditions thus imposed. This mere *customary life* (the watch wound up and going on of itself) is that which brings on natural death. Custom is activity without opposition, for which there remains only a formal duration; in which the fulness and zest that originally characterised the aim of life is out of the question,—a merely external sensuous existence which has ceased to throw itself enthusiastically into its object. Thus perish individuals, thus perish peoples by a natural death; and though the latter may continue in being, it is an existence without intellect or vitality; having no need of its institutions, because

the need for them is satisfied,—a political nullity and tedium. In order that a truly universal interest may arise, the Spirit of a People must advance to the adoption of some new purpose: but whence can this new purpose originate? It would be a higher, more comprehensive conception of itself—a transcending of its principle—but this very act would involve a principle of a new order, a new National Spirit.

Such a new principle does in fact enter into the Spirit of a people that has arrived at full development and self-realization; it dies not a simply natural death,—for it is not a mere single individual, but a spiritual, generic life; in its case natural death appears to imply destruction through its own agency. The reason of this difference from the single natural individual, is that the Spirit of a people exists as a *genus*, and consequently carries within it its own negation, in the very generality which characterizes it. A people can only die a violent death when it has become naturally dead in itself, as *e. g.*, the German Imperial Cities, the German Imperial Constitution.

It is not of the nature of the all-pervading Spirit to die this merely natural death; it does not simply sink into the senile life of mere custom, but—as being a National Spirit belonging to Universal History—attains to the consciousness of what its work is; it attains to a conception of itself. In fact it is world-historical only in so far as a *universal principle* has lain in its fundamental element,—in its grand aim: only so far is the work which such a spirit produces, a moral, political organization. If it be mere desires that impel nations to activity, such deeds pass over without leaving a trace; or their traces are only ruin and destruction. Thus, it was first Chronos—Time—that ruled; the Golden Age, without moral products; and what was produced—the offspring of that Chronos—was devoured by it. It was Jupiter—from whose head Minerva sprang, and to whose circle of divinities belongs Apollo and the Muses—that first put a constraint upon Time, and set a bound to its principle of decadence. He is the Political god, who produced a moral work—the State.

In the very element of an achievement the quality of generality, of thought, is contained; without thought it has no

objectivity; that is its basis. The highest point in the development of a people is this,—to have gained a conception of its life and condition,—to have reduced its laws, its ideas of justice and morality to a science; for in this unity [of the objective and subjective] lies the most intimate unity that Spirit can attain to in and with itself. In its work it is employed in rendering itself an object of its own contemplation; but it cannot develop itself objectively in its essential nature, except in *thinking* itself.

At this point, then, Spirit is acquainted with its principles—the general character of its acts. But at the same time, in virtue of its very generality, this work of thought is different in point of form from the actual achievements of the national genius, and from the vital agency by which those achievements have been performed. We have then before us a *real* and an *ideal* existence of the Spirit of the Nation. If we wish to gain the general idea and conception of what the Greeks were, we find it in Sophocles and Aristophanes, in Thucydides and Plato. In these individuals the Greek spirit conceived and thought itself. This is the profounder kind of satisfaction which the Spirit of a people attains; but it is “ideal,” and distinct from its “real” activity.

At such a time, therefore, we are sure to see a people finding satisfaction in the *idea* of virtue; putting *talk* about virtue partly side by side with actual virtue, but partly in the place of it. On the other hand pure, universal thought, since its nature is universality, is apt to bring the Special and Spontaneous—Belief, Trust, Customary Morality—to reflect upon itself, and its primitive simplicity; to shew up the limitation with which it is fettered,—partly suggesting reasons for renouncing duties, partly itself *demanding reasons*, and the connection of such requirements with Universal Thought; and not finding that connection, seeking to impeach the authority of duty generally, as destitute of a sound foundation.

At the same time the isolation of individuals from each other and from the Whole makes its appearance; their aggressive selfishness and vanity; their seeking personal advantage and consulting this at the expense of the State at large. That

inward principle in transcending its outward manifestations is subjective also in *form*—viz., selfishness and corruption in the unbound passions and egotistic interests of men.

Zeus, therefore, who is represented as having put a limit to the devouring agency of Time, and staid this transiency by having established something inherently and independently durable—Zeus and his race are themselves swallowed up, and that by the very power that produced them,—the principle of thought, perception, reasoning, insight derived from rational grounds, and the requirement of such grounds.

Time is the negative element in the sensuous world. Thought is the same negativity, but it is the deepest, the infinite form of it, in which therefore all existence generally is dissolved; first *finite* existence,—*determinate*, limited form: but existence *generally*, in its objective character, is limited; it appears therefore as a mere datum—something immediate—authority;—and is either intrinsically finite and limited, or presents itself as a limit for the thinking subject, and its infinite reflection on itself [unlimited abstraction].

But first we must observe how the life which proceeds from death, is itself, on the other hand, only individual life; so that, regarding the species as the real and substantial in this vicissitude, the perishing of the individual is a regress of the species into individuality. The perpetuation of the race is, therefore, none other than the monotonous repetition of the same kind of existence. Further, we must remark how perception,—the comprehension of being by thought,—is the source and birth-place of a new, and in fact higher form, in a principle which while it preserves, dignifies its material. For Thought is that *Universal*—that *Species* which is immortal, which preserves identity with itself. The particular form of Spirit not merely passes away in the world by natural causes in Time, but is annulled in the automatic self-mirroring activity of consciousness. Because this annulling is an activity of Thought, it is at the same time conservative and elevating in its operation. While then, on the one side, Spirit annuls the reality, the permanence of that which it *is*, it gains on the other side, the essence, the Thought, the Universal element of that which

it only was [its transient conditions]. Its principle is no longer that immediate import and aim which it was previously, but the *essence* of that import and aim.

The result of this process is then that Spirit, in rendering itself objective and making this its being an object of thought, on the one hand destroys the determinate form of its being, on the other hand gains a comprehension of the universal element which it involves, and thereby gives a new form to its inherent principle. In virtue of this, the substantial character of the National Spirit has been altered,—that is, its principle has risen into another, and in fact a higher principle.

It is of the highest importance in apprehending and comprehending History to have and to understand the thought involved in this transition. The individual traverses as a unity various grades of development, and remains the same individual; in like manner also does a people, till the Spirit which it embodies reaches the grade of universality. In this point lies the fundamental, the Ideal necessity of transition. This is the soul—the essential consideration—of the philosophical comprehension of History.

Spirit is essentially the result of its own activity: its activity is the transcending of immediate, simple, unreflected existence,—the negation of that existence, and the returning into itself. We may compare it with the seed; for with this the plant begins, yet it is also the result of the plant's entire life. But the weak side of life is exhibited in the fact that the commencement and the result are disjoined from each other. Thus also is it in the life of individuals and peoples. The life of a people ripens a certain fruit; its activity aims at the complete manifestation of the principle which it embodies. But this fruit does not fall back into the bosom of the people that produced and matured it; on the contrary, it becomes a poison-draught to it. That poison-draught it cannot let alone, for it has an insatiable thirst for it: the taste of the draught is its annihilation, though at the same time the rise of a new principle.

We have already discussed the final aim of this progression. The principles of the successive phases of Spirit that animate

the Nations in a necessitated gradation, are themselves only steps in the development of the one universal Spirit, which through them elevates and completes itself to a self-comprehending *totality*.

While we are thus concerned exclusively with the Idea of Spirit, and in the History of the World regard everything as only its manifestation, we have, in traversing the past,—however extensive its periods,—only to do with what is *present*; for philosophy, as occupying itself with the True, has to do with the *eternally present*. Nothing in the past is lost for it, for the Idea is ever present; Spirit is immortal; with it there is no past, no future, but an essential *now*. This necessarily implies that the present form of Spirit comprehends within it all earlier steps. These have indeed unfolded themselves in succession independently; but what Spirit is it has always been essentially; distinctions are only the development of this essential nature. The life of the ever present Spirit is a circle of progressive embodiments, which looked at in one aspect still exist beside each other, and only as looked at from another point of view appear as past. The grades which Spirit seems to have left behind it, it still possesses in the depths of its present.

Karl Marx

THE COMMUNIST
MANIFESTO

Karl Marx
[1818-1883]

The class struggle, as enunciated by Karl Marx, is the main doctrine of the theory as well as the means of achieving Socialism. Because the economic forces in the modern world are in constant conflict, Marx proclaimed that the working classes, out of historic necessity, must make their bid for power by uniting, bringing about social and political changes and achieving dominance in society through the "dictatorship of the proletariat." Marx's approach was philosophical, Hegelian, and his materialist conception of history is basic to his philosophy of economic determinism. In his major work, *Capital*, Marx systematically develops his theory of surplus value, which maintains that the worker is exploited in an inequitable distribution of the products of his labor by the owners of the means of production. The surplus is in the difference between what he gets in order to subsist and what is totally derived from what he creates. *The Communist Manifesto*, written in 1847 in collaboration with Friedrich Engels, is a call to action and has become a battlecry in a large portion of the world.

THE COMMUNIST MANIFESTO

KARL MARX

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre; Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as communistic by its opponents in power? Where the Opposition that has not hurled back the branding reproach of Communism against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

I

*Bourgeois and Proletarians*¹

The history of all hitherto existing society² is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master³ and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary re-constitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the middle ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

¹ By bourgeoisie is meant the class of modern Capitalists, owners of the means of social production and employers of wage-labor. By proletariat, the class of modern wage laborers who, having no means of production of their own, are reduced to selling their labor-power in order to live.

² That is, all written history. In 1847, the pre-history of society, the social organization existing previous to recorded history, was all but unknown. Since then Haxthausen discovered common ownership of land in Russia, Maurer proved it to be the social foundation from which all Teutonic races started in history, and bye and bye village communities were found to be, or to have been, the primitive form of society everywhere from India to Ireland. The inner organization of this primitive Communistic society was laid bare, in its typical form, by Morgan's crowning discovery of the true nature of the gens and its relation to the tribe. With the dissolution of these primeval communities society begins to be differentiated into separate and finally antagonistic classes. I have attempted to retrace this process of dissolution in: "Der Ursprung der Familie, des Privateigenthums und des Staats," 2nd edit., Stuttgart, 1886.

³ Guild-master, that is, a full member of a guild, a master within, not a head.

The modern bourgeois society that has sprouted from the ruins of feudal society, has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature; it has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the middle ages sprang the chartered burghers of the earliest towns. From these burgesses the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape, opened up fresh ground for the rising bourgeoisie. The East Indian and Chinese markets, the colonization of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolized by closed guilds, now no longer sufficed for the growing wants of the new market. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle-class: division of labor between the different corporate guilds vanished in the face of division of labor in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionized industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle-class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its

turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the mediaeval commune,⁴ here independent urban republic (as in Italy and Germany), there taxable "third estate" of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against nobility, and, in fact, corner stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervor, of chivalrous enthusiasm, of Philistine sentimentalism,

⁴ "Commune" was the name taken in France by the nascent towns even before they had conquered from their feudal lords and masters, local self-government and political rights as "the Third Estate." Generally speaking, for economical development of the bourgeoisie, England is here taken as the typical country, for its political development, France.

in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honored and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage laborers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigor in the Middle Ages, which reactionists so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionizing the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionizing of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new formed ones become antiquated before they can ossify. All that is solid melts into the air, all that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the

globe. It must nestle everywhere, settle everywhere, establish connections everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilized nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal interdependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National onesidedness and narrowmindedness become more and more impossible, and from the numerous national and local literatures there arises a world-literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian nations into civilization. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate. It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilization into their midst, *i. e.*, to become bourgeois themselves. In a word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared with the rural, and has thus

rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on civilized ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated population, centralized means of production, and has concentrated property in a few hands. The necessary consequence of this was political centralization. Independent, or but loosely connected provinces, with separate interests, laws, governments, and systems of taxation, became lumped together in one nation, with one government, one code of laws, one national class interest, one frontier and one customs tariff.

The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalization of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labor?

We see then: the means of production and of exchange on whose foundation the bourgeoisie built itself up, were generated in feudal society. At a certain stage in the development of these means of production and of exchange, the conditions under which feudal society produced and exchanged, the feudal organization of agriculture and manufacturing industry, in one word, the feudal relations of property became no longer compatible with the already developed productive forces; they became so many fetters. They had to burst asunder; they were burst asunder.

Into their places stepped free competition, accompanied by social and political constitution adapted to it, and by economical and political sway of the bourgeois class.

A similar movement is going on before our own eyes. Modern bourgeois society with its relations of production, of exchange and of property, a society that has conjured up such gigantic means of production and of exchange, is like the sorcerer, who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past, the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put on its trial, each time more threateningly, the existence of the entire bourgeois society. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of overproduction. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a universal war of devastation, had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed; and why? Because there is too much civilization, too much means of subsistence, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of the bourgeois property; on the contrary, they have become too powerful for these conditions by which they are fettered, and as soon as they overcome these fetters they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand by enforced destruction of a mass of productive forces; on the other, by the conquest of new markets, and by the more thorough exploitation of the old ones. That is to say, by paving the way for more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

The weapons with which the bourgeoisie felled feudalism to the ground are now turned against the bourgeoisie itself.

But not only has the bourgeoisie forged the weapons that bring death to itself; it has also called into existence the men who are to wield those weapons—the modern working-class—the proletarians.

In proportion as the bourgeoisie, *i. e.*, capital, is developed, in the same proportion is the proletariat, the modern working-class, developed, a class of laborers who live only so long as they find work, and who find work only so long as their labor increases capital. These laborers, who must sell themselves piecemeal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labor, the work of the proletarians has lost all individual character, and, consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous and most easily acquired knack that is required of him. Hence, the cost of production of a workman is restricted almost entirely to the means of subsistence that he requires for his maintenance, and for the propagation of his race. But the price of a commodity, and also of labor, is equal to its cost of production. In proportion, therefore, as the repulsiveness of the work increases the wage decreases. Nay more, in proportion as the use of machinery and division of labor increases, in the same proportion the burden of toil increases, whether by prolongation of the working hours, by increase of the work enacted in a given time, or by increased speed of the machinery, etc.

Modern industry has converted the little workshop of the patriarchal master into the great factory of the industrial capitalist. Masses of laborers, crowded into factories, are organized like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they the slaves of the bourgeois class and of the bourgeois state, they are daily and hourly enslaved by the machine, by the overlooker, and,

above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is.

The less the skill and exertion or strength implied in manual labor, in other words, the more modern industry becomes developed, the more is the labor of men superseded by that of women. Differences of age and sex have no longer any distinctive social validity for the working class. All are instruments of labor, more or less expensive to use, according to their age and sex.

No sooner is the exploitation of the laborer by the manufacturer, so far at an end, that he receives his wages in cash, than he is set upon by the other portions of the bourgeoisie, the landlord, the shopkeeper, the pawnbroker, etc.

The lower strata of the middle class—the small tradespeople, shopkeepers and retired tradesmen generally, the handicraftsmen and peasants—all these sink gradually into the proletariat, partly because their diminutive capital does not suffice for the scale on which Modern Industry is carried on, and is swamped in the competition with the large capitalists, partly because their specialized skill is rendered worthless by new methods of production. Thus the proletariat is recruited from all classes of the population.

The proletariat goes through various stages of development. With its birth begins its struggle with the bourgeoisie. At first the contest is carried on by individual laborers, then by the workpeople of a factory, then by the operatives of one trade, in one locality, against the individual bourgeois who directly exploits them. They direct their attacks not against the bourgeois conditions of production, but against the instruments of production themselves; they destroy imported wares that compete with their labor, they smash to pieces machinery, they set factories ablaze, they seek to restore by force the vanished status of the workman of the Middle Ages.

At this stage the laborers still form an incoherent mass scattered over the whole country, and broken up by their mutual

competition. If anywhere they unite to form more compact bodies, this is not yet the consequence of their own active union, but of the union of the bourgeoisie, which class, in order to attain its own political ends, is compelled to set the whole proletariat in motion, and is moreover yet, for a time, able to do so. At this stage, therefore, the proletarians do not fight their enemies, but the enemies of their enemies, the remnants of absolute monarchy, the landowners, the non-industrial bourgeois, the petty bourgeoisie. Thus the whole historical movement is concentrated in the hands of the bourgeoisie, every victory so obtained is a victory for the bourgeoisie.

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalized, in proportion as machinery obliterates all distinctions of labor, and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crisis, make the wages of the workers even more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (Trades' Unions) against the bourgeois; they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots.

Now and then the workers are victorious, but only for a time. The real fruit of their battle lies not in the immediate result but in the ever-expanding union of workers. This union is helped on by the improved means of communication that are created by modern industry, and that places the workers of different localities in contact with one another. It was just this contact that was needed to centralize the numerous local

struggles, all of the same character, into one national struggle between classes. But every class struggle is a political struggle. And that union, to attain which the burghers of the Middle Ages with their miserable highways, required centuries, the modern proletarians, thanks to railways, achieve in a few years.

This organization of the proletarians into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. It compels legislative recognition of particular interests of the workers by taking advantage of the divisions among the bourgeoisie itself. Thus the ten hours' bill in England was carried.

Altogether collisions between the classes of the old society further, in many ways, the course of development of the proletariat. The bourgeoisie finds itself involved in a constant battle. At first with the aristocracy; later on, with those portions of the bourgeoisie itself whose interests have become antagonistic to the progress of industry; at all times, with the bourgeoisie of foreign countries. In all these battles it sees itself compelled to appeal to the proletariat, to ask for its help, and thus, to drag it into the political arena. The bourgeoisie itself, therefore, supplies the proletariat with its own elements of political and general education; in other words, it furnishes the proletariat with weapons for fighting the bourgeoisie.

Further, as we have already seen, entire sections of the ruling classes are, by the advance of industry, precipitated into the proletariat, or are at least threatened in their conditions of existence. These also supply the proletariat with fresh elements of enlightenment and progress.

Finally, in times when the class-struggle nears the decisive hour, the process of dissolution going on within the ruling class—in fact, within the whole range of an old society—assumes such a violent, glaring character that a small section of the ruling class cuts itself adrift and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over

to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movements as a whole.

Of all the classes that stand face to face with the bourgeoisie to-day the proletariat alone is a really revolutionary class. The other classes decay and finally disappear in the face of modern industry; the proletariat is its special and essential product.

The lower middle class, the small manufacturer, the shopkeeper, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class. They are therefore not revolutionary, but conservative. Nay, more; they are reactionary, for they try to roll back the wheel of history. If by chance they are revolutionary, they are so only in view of their impending transfer into the proletariat; they thus defend not their present, but their future interests; they desert their own standpoint to place themselves at that of the proletariat.

The "dangerous class," the social scum, that passively rotting mass thrown off by the lowest layers of old society, may, here and there, be swept into the movement by a proletarian revolution; its conditions of life, however, prepare it far more for the part of a bribed tool of reactionary intrigue.

In the conditions of the proletariat, those of the old society at large are already virtually swamped. The proletarian is without property; his relation to his wife and children has no longer anything in common with the bourgeois family relations; modern industrial labor, modern subjection to capital, the same in England as in France, in America as in Germany, has stripped him of every trace of national character. Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests.

All the preceding classes that got the upper hand sought to fortify their already acquired status by subjecting society at large to their conditions of appropriation. The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropria-

tion, and thereby also every other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for and insurances of individual property.

All previous historical movements were movements of minorities, or in the interest of minorities. The proletarian movement is the self-conscious, independent movement of the immense majority. The proletariat, the lowest stratum of our present society, cannot stir, cannot raise itself up without the whole superincumbent strata of official society being sprung into the air.

Though not in substance, yet in form, the struggle of the proletariat with the bourgeoisie is at first a national struggle. The proletariat of each country must, of course, first of all settle matters with its own bourgeoisie.

In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war, raging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie, lays the foundations for the sway of the proletariat.

Hitherto every form of society has been based, as we have already seen, on the antagonism of oppressing and oppressed classes. But in order to oppress a class, certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism managed to develop into a bourgeois. The modern laborer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule, because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him

sink into such a state that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie; in other words, its existence is no longer compatible with society.

The essential condition for the existence, and for the sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage labor. Wage labor rests exclusively on competition between the laborers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the laborers, due to competition, by their involuntary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie therefore produces, above all, are its own grave diggers. Its fall and the victory of the proletariat are equally inevitable.

II

Proletarians and Communists

In what relation do the Communists stand to the proletarians as a whole?

The Communists do not form a separate party opposed to other working-class parties.

They have no interests separate and apart from those of the proletariat as a whole.

They do not set up any sectarian principles of their own, by which to shape and mould the proletarian movement.

The Communists are distinguished from the other working class parties by this only: 1. In the national struggles of the proletarians of the different countries, they point out and bring to the front the common interests of the entire proletariat, independently of all nationality. 2. In the various stages of development which the struggle of the working class

against the bourgeoisie has to pass through, they always and everywhere represent the interests of the movement as a whole.

The Communists, therefore, are on the one hand practically the most advanced and resolute section of the working class parties of every country, that section which pushes forward all others; on the other hand, theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the ultimate general results of the proletarian movement.

The immediate aim of the Communists is the same as that of all the other proletarian parties; formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat.

The theoretical conclusions of the Communists are in no way based on ideas or principles that have been invented or discovered by this or that would-be universal reformer.

They merely express, in general terms, actual relations springing from an existing class struggle, from a historical movement going on under our very eyes. The abolition of existing property relations is not at all a distinctive feature of Communism.

All property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.

The French Revolution, for example, abolished feudal property in favor of bourgeois property.

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products, that is based on class antagonism, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property.

We Communists have been reproached with the desire of abolishing the right of personally acquiring property as the fruit of a man's own labor, which property is alleged to be the

groundwork of all personal freedom, activity and independence.

Hard won, self-acquired, self-earned property! Do you mean the property of the petty artisan and of the small peasant, a form of property that preceded the bourgeois form? There is no need to abolish that; the development of industry has to a great extent already destroyed it, and is still destroying it daily.

Or do you mean modern bourgeois private property?

But does wage labor create any property for the laborer? Not a bit. It creates capital, *i. e.*, that kind of property which exploits wage labor, and which cannot increase except upon condition of getting a new supply of wage labor for fresh exploitation. Property, in its present form, is based on the antagonism of capital and wage labor. Let us examine both sides of this antagonism.

To be a capitalist is to have not only a purely personal, but a social status in production. Capital is a collective product, and only by the united action of many members, nay, in the last resort, only by the united action of all members of society, can it be set in motion.

Capital is therefore not a personal, it is a social power.

When, therefore, capital is converted into common property, into the property of all members of society, personal property is not thereby transformed into social property. It is only the social character of the property that is changed. It loses its class character.

Let us now take wage labor.

The average price of wage labor is the minimum wage, *i. e.*, that quantum of the means of subsistence which is absolutely requisite to keep the laborer in bare existence as a laborer. What, therefore, the wage laborer appropriates by means of his labor, merely suffices to prolong and reproduce a bare existence. We by no means intend to abolish this personal appropriation of the products of labor, an appropriation that is made for the maintenance and reproduction of human life, and that leaves no surplus wherewith to command the labor of others. All that we want to do away with is the miserable

character of this appropriation, under which the laborer lives merely to increase capital and is allowed to live only in so far as the interests of the ruling class require it.

In bourgeois society, living labor is but a means to increase accumulated labor. In Communist society accumulated labor is but a means to widen, to enrich, to promote the existence of the laborer.

In bourgeois society, therefore, the past dominates the present; in communist society the present dominates the past. In bourgeois society, capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois abolition of individuality and freedom! And rightly so. The abolition of bourgeois individuality, bourgeois independence and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other "brave words" of our bourgeoisie about freedom in general have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the Middle Ages, but have no meaning when opposed to the Communistic abolition of buying and selling, of the bourgeois conditions of production, and of the bourgeoisie itself.

You are horrified at our intending to do away with private property. But in your existing society private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In one word, you reproach us with intending to do away with your property. Precisely so: that is just what we intend.

From the moment when labor can no longer be converted into capital, money, or rent, into a social power capable of

being monopolized, *i. e.*, from the moment when individual property can no longer be transformed into bourgeois property, into capital, from that moment, you say, individuality vanishes.

You must, therefore, confess that by "individual" you mean no other person than the bourgeois, than the middle-class owner of property. This person must, indeed, be swept out of the way and made impossible.

Communism deprives no man of the power to appropriate the products of society: all that it does is to deprive him of the power to subjugate the labor of others by means of such appropriation.

It has been objected that upon the abolition of private property all work will cease and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work acquire nothing, and those who acquire anything do not work. The whole of this objection is but another expression of the tautology: that there can no longer be any wage labor when there is no longer any capital.

All objections urged against the Communistic mode of producing and appropriating material products have, in the same way, been urged against the Communistic modes of producing and appropriating intellectual products. Just as, to the bourgeois, the disappearance of class property is the disappearance of production itself, so the disappearance of class culture is to him identical with the disappearance of all culture.

That culture, the loss of which he laments, is, for the enormous majority, a mere training to act as a machine.

But don't wrangle with us so long as you apply, to our intended abolition of bourgeois property, the standard of your bourgeois notions of freedom, culture, law, etc. Your very ideas are but the outgrowth of the conditions of your bourgeois production and bourgeois property, just as your jurisprudence is but the will of your class made into a law for all, a will whose essential character and direction are determined by the economical conditions of existence of your class.

The selfish misconception that induces you to transform into eternal laws of nature and of reason the social forms springing from your present mode of production and form of property—historical relations that rise and disappear in the progress of production—this misconception you share with every ruling class that has preceded you. What you see clearly in the case of ancient property, what you admit in the case of feudal property, you are of course forbidden to admit in the case of your own bourgeois form of property.

Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But this state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate; by the intervention, direct or indirect, of society by means of schools, etc.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention, and to rescue education from the influence of the ruling class.

The bourgeois clap-trap about the family and education, about the hallowed correlation of parent and child, become all the more disgusting, the more, by the action of Modern Industry, all family ties among the proletarians are torn asunder and their children transformed into simple articles of commerce and instruments of labor.

But you communists would introduce community of women, screams the whole bourgeoisie chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion, than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point aimed at is to do away with the status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no need to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the greatest pleasure in seducing each others' wives.

Bourgeois marriage is in reality a system of wives in common, and thus, at the most, what the Communists might possibly be reproached with, it that they desire to introduce, in substitution for a hypocritically concealed, an openly legalized community of women. For the rest, it is self-evident that the abolition of the present system of production must bring with it the abolition of the community of women springing from that system, *i. e.*, of prostitution both public and private.

The Communists are further reproached with desiring to abolish countries and nationalities.

The working men have no country. We cannot take from them what they don't possess. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself the nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are

daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world-market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilized countries at least, is one of the first conditions for the emancipation of the proletariat.

In proportion as the exploitation of one individual by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

The charges against Communism made from a religious, a philosophical, and generally, from an ideological standpoint, are not deserving of serious examination.

Does it require deep intuition to comprehend that man's ideas, views and conceptions, in one word, man's consciousness, changes with every change in the conditions of his material existence, in his social relations and in his social life?

What else does the history of ideas prove than that intellectual production changes in character in proportion as material production is changed? The ruling ideas of each age have ever been the ideas of its ruling class.

When people speak of ideas that revolutionize society they do but express the fact that within the old society the elements of a new one have been created, and that the dissolution of the old ideas keeps even pace with the dissolution of the old conditions of existence.

When the ancient world was in its last throes the ancient religions were overcome by Christianity. When Christian ideas succumbed in the 18th century to rationalist ideas, feudal society fought its death-battle with the then revolutionary bourgeoisie. The ideas of religious liberty and freedom of conscience merely gave expression to the sway of free competition within the domain of knowledge.

"Undoubtedly," it will be said, "religious, moral, philosophical and judicial ideas have been modified in the course of

historical development. But religion, morality, philosophy, political science, and law, constantly survived this change.

"There are, besides, eternal truths, such as Freedom, Justice, etc., that are common to all states of society. But Communism abolishes eternal truths, it abolishes all religion and all morality, instead of constituting them on a new basis; it therefore acts in contradiction to all past historical experience."

What does this accusation reduce itself to? The history of all past society has consisted in the development of class antagonisms, antagonisms that assumed different forms at different epochs.

But whatever form they may have taken, one fact is common to all past ages, viz., the exploitation of one part of society by the other. No wonder, then, that the social consciousness of past ages, despite all the multiplicity and variety it displays, moves within certain common forms, or general ideas, which cannot completely vanish except with the total disappearance of class antagonisms.

The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas.

But let us have done with the bourgeois objections to Communism.

We have seen above that the first step in the revolution by the working class is to raise the proletariat to the position of ruling class, to win the battle of democracy.

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralize all instruments of production in the hands of the State, *i. e.*, of the proletariat organized as a ruling class; and to increase the total productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which in the course of the movement outstrip themselves, necessitate further inroads upon the old

social order, and are unavoidable as a means of entirely revolutionizing the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries the following will be pretty generally applicable:

1. Abolition of property in land and application of all rents of land to public purposes.

2. A heavy progressive or graduated income tax.

3. Abolition of all right of inheritance.

4. Confiscation of the property of all emigrants and rebels.

5. Centralization of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.

6. Centralization of the means of communication and transport in the hands of the State.

7. Extension of factories and instruments of production owned by the State; the bringing into cultivation of waste lands, and the improvement of the soil generally in accordance with a common plan.

8. Equal liability of all to labor. Establishment of industrial armies, especially for agriculture.

9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country by a more equable distribution of the population over the country.

10. Free education for all children in public schools. Abolition of children's factory labor in its present form. Combination of education with industrial production, etc., etc.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organized power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organize itself as a class, if, by means of a revolution, it makes itself the ruling class, and, as such, sweeps away by force the old conditions of production, then it will, along

with these conditions, have swept away the conditions for the existence of class antagonism, and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association in which the free development of each is the condition for the free development of all.

III

Socialist and Communist Literature

I. REACTIONARY SOCIALISM

(A) *Feudal Socialism*

Owing to their historical position, it became the vocation of the aristocracies of France and England to write pamphlets against modern bourgeois society. In the French revolution of July, 1830, and in the English reform agitation, these aristocracies again succumbed to the hateful upstart. Thenceforth, a serious political contest was altogether out of the question. A literary battle alone remained possible. But even in the domain of literature the old cries of the restoration period⁵ had become impossible.

In order to arouse sympathy the aristocracy were obliged to lose sight, apparently, of their own interests and to formulate their indictment against the bourgeoisie in the interest of the exploited working class alone. Thus the aristocrats took their revenge by singing lampoons on their new master, and whispering in his ears sinister prophecies of coming catastrophe.

In this way arose feudal socialism: half lamentation, half lampoon; half echo of the past, half menace of the future; at times, by its bitter, witty and incisive criticism, striking the

⁵ Not the English Restoration, 1660 to 1689, but the French Restoration, 1814 to 1830.

bourgeoisie to the very hearts' core, but always ludicrous in its effect, through total incapacity to comprehend the march of modern history.

The aristocracy, in order to rally the people to them, waved the proletarian alms-bag in front of a banner. But the people, so often as it joined them, saw on their hindquarters the old feudal coat of arms, and deserted with loud and irreverent laughter.

One section of the French Legitimists, and "Young England," exhibited this spectacle.

In pointing out that their mode of exploitation was different to that of the bourgeoisie, the feudalists forget that they exploited under circumstances and conditions that were quite different, and that are now antiquated. In showing that, under their rule, the modern proletariat never existed, they forget that the modern bourgeoisie is the necessary offspring of their own form of society.

For the rest, so little do they conceal the reactionary character of their criticism that their chief accusation against the bourgeoisie amounts to this, that under the bourgeois régime a class is being developed which is destined to cut up root and branch the old order of society.

What they upbraid the bourgeoisie with is not so much that it creates a proletariat, as that it creates a revolutionary proletariat.

In political practice, therefore, they join in all coercive measures against the working-class; and in ordinary life, despite their high-falutin phrases, they stoop to pick up the golden apples dropped from the trees of industry, and to barter truth, love and honor for traffic in wool, beetroot-sugar and potato spirit.⁶

⁶ This applies chiefly to Germany, where the landed aristocracy and squirearchy have large portions of their estates cultivated for their own account by stewards, and are, moreover, extensive beetroot-sugar manufacturers and distillers of potato spirits. The wealthier British aristocracy are, as yet, rather above that; but they, too, know how to make up for declining rents by lending their names to floaters of more or less shady joint-stock companies.

As the parson has ever gone hand in hand with the landlord, so has Clerical Socialism with Feudal Socialism.

Nothing is easier than to give Christian asceticism a Socialist tinge. Has not Christianity declaimed against private property, against marriage, against the State? Has it not preached, in the place of these, charity and poverty, celibacy and mortification of the flesh, monastic life and Mother Church? Christian Socialism is but the Holy water with which the priest consecrates the heartburnings of the aristocrat.

(B) *Petty Bourgeois Socialism*

The feudal aristocracy was not the only class that was ruined by the bourgeoisie, not the only class whose conditions of existence pined and perished in the atmosphere of modern bourgeois society. The medieval burgesses and the small peasant bourgeoisie were the precursors of the modern bourgeoisie. In those countries which are but little developed, industrially and commercially, these two classes still vegetate side by side with the rising bourgeoisie.

In countries where modern civilization has become fully developed, a new class of petty bourgeois has been formed, fluctuating between proletariat and bourgeoisie, and ever renewing itself as a supplementary part of bourgeois society. The individual members of this class, however, are being constantly hurled down into the proletariat by the action of competition, and, as modern industry develops, they even see the moment approaching when they will completely disappear as an independent section of modern society, to be replaced, in manufactures, agriculture and commerce, by over-lookers, bailiffs and shopmen.

In countries like France, where the peasants constitute far more than half of the population, it was natural that writers who sided with the proletariat against the bourgeoisie should use, in their criticism of the bourgeois régime, the standard of the peasant and petty bourgeois, and from the standpoint of these intermediate classes should take up the cudgels for the working class. Thus arose petty bourgeois Socialism. Sismondi

was the head of this school, not only in France, but also in England.

This school of socialism dissected with great acuteness the contradictions in the conditions of modern production. It laid bare the hypocritical apologies of economists. It proved incontrovertibly the disastrous effects of machinery and division of labor; the concentration of capital and land in a few hands; overproduction and crises; it pointed out the inevitable ruin of the petty bourgeois and peasant, the misery of the proletariat, the anarchy in production, the crying inequalities in the distribution of wealth, the industrial war of extermination between nations, the dissolution of old moral bonds, of the old family relations, of the old nationalities.

In its positive aims, however, this form of Socialism aspires either to restoring the old means of production and of exchange, and with them the old property relations and the old society, or to cramping the modern means of production and of exchange, within the framework of the old property relations that have been, and were bound to be, exploded by those means. In either case it is both reactionary and Utopian.

Its last words are: corporate guilds for manufacture; patriarchal relations in agriculture.

Ultimately, when stubborn historical facts had dispersed all intoxicating effects of self-deception, this form of Socialism ended in a miserable fit of the blues.

The Socialist and Communist literature of France, a literature that originated under the pressure of a bourgeoisie in power, and that was the expression of the struggle against this power, was introduced into Germany at a time when the bourgeoisie in that country had just begun its contest with feudal absolutism.

German philosophers, would-be philosophers and *beaux esprits* eagerly seized on this literature, only forgetting that, when these writings emigrated from France into Germany, French social conditions had not emigrated along with them. In contact with German social conditions this French literature lost its immediate practical significance and assumed a

purely literary aspect. Thus, to the German philosophers of the Eighteenth Century the demands of the first French Revolution were nothing more than the demands of "Practical Reason" in general, and the utterance of the will of the revolutionary French bourgeoisie signified in their eyes the laws of pure Will, of Will as it was bound to be, of true human Will generally.

The work of the German literati consisted solely in bringing the new French ideas into harmony with their ancient philosophical conscience, or, rather, in annexing the French ideas without deserting their own philosophic point of view.

This annexation took place in the same way in which a foreign language is appropriated, namely, by translation.

It is well known how the monks wrote silly lives of Catholic Saints over the manuscripts on which the classical works of ancient heathendom had been written. The German literati reversed this process with the profane French literature. They wrote their philosophical nonsense beneath the French original. For instance, beneath the French criticism of the economic functions of money they wrote "Alienation of Humanity," and beneath the French criticism of the bourgeois State they wrote "Dethronement of the Category of the General," and so forth.

The introduction of these philosophical phrases at the back of the French historical criticisms they dubbed "Philosophy of Action," "True Socialism," "German Science of Socialism," "Philosophical Foundation of Socialism," and so on.

The French Socialist and Communist literature was thus completely emasculated. And, since it ceased in the hands of the German to express the struggle of one class with the other, he felt conscious of having overcome "French one-sidedness" and of representing, not true requirements, but the requirements of Truth, not the interests of the proletariat, but the interests of Human Nature, of Man in general, who belongs to no class, has no reality, who exists only in the misty realm of philosophical phantasy.

This German Socialism, which took its school-boy task so

seriously and solemnly, and extolled its poor stock-in-trade in such mountebank fashion, meanwhile gradually lost its pedantic innocence.

The fight of the German, and especially of the Prussian, bourgeoisie against feudal aristocracy and absolute monarchy, in other words, the liberal movement, became more earnest.

By this, the long-wished-for opportunity was offered to "True Socialism" of confronting the political movement with the socialist demands, of hurling the traditional anathemas against liberalism, against representative government, against bourgeois competition, bourgeois freedom of the press, bourgeois legislation, bourgeois liberty and equality, and of preaching to the masses that they had nothing to gain and everything to lose by this bourgeois movement. German Socialism forgot, in the nick of time, that the French criticism, whose silly echo it was, presupposed the existence of modern bourgeois society, with its corresponding economic conditions of existence, and the political constitution adapted thereto, the very things whose attainment was the object of the pending struggle in Germany.

To the absolute governments, with their following of parsons, professors, country squires and officials, it served as a welcome scarecrow against the threatening bourgeoisie.

It was a sweet finish after the bitter pills of floggings and bullets with which these same governments, just at that time, dosed the German working class risings.

While this "True" Socialism thus served the governments as a weapon for fighting the German bourgeoisie, it at the same time directly represented a reactionary interest, the interest of the German Philistines. In Germany the petty bourgeois class, a relic of the 16th century, and since then constantly cropping up again under various form, is the real social basis of the existing state of things.

To preserve this class is to preserve the existing state of things in Germany. The industrial and political supremacy of the bourgeoisie threatens it with certain destruction; on the one hand, from the concentration of capital; on the other, from the rise of a revolutionary proletariat. "True" Socialism

appeared to kill these two birds with one stone. It spread like an epidemic.

The robe of speculative cobwebs, embroidered with flowers of rhetoric, steeped in the dew of sickly sentiment, this transcendental robe in which the German Socialists wrapped their sorry "eternal truths," all skin and bone, served to wonderfully increase the sale of their goods amongst such a public.

And on its part, German Socialism recognized more and more its own calling as the bombastic representative of the petty bourgeois Philistine.

It proclaimed the German nation to be the model nation, and the German petty Philistine to be the typical man. To every villainous meanness of this model man it gave a hidden, higher, socialistic interpretation, the exact contrary of its true character. It went to the extreme length of directly opposing the "brutally destructive" tendency of Communism, and of proclaiming its supreme and impartial contempt of all class struggle. With very few exceptions, all the so-called Socialist and Communist publications that now (1847) circulate in Germany belong to the domain of this foul and enervating literature.

2. CONSERVATIVE OR BOURGEOIS SOCIALISM

A part of the bourgeoisie is desirous of redressing social grievances, in order to secure the continued existence of bourgeois society.

To this section belong economists, philanthropists, humanitarians, improvers of the condition of the working class, organizers of charity, members of societies for the prevention of cruelty to animals, temperance fanatics, hole and corner reformers of every imaginable kind. This form of Socialism has, moreover, been worked out into complete systems.

We may cite Proudhon's "Philosophie de la Misère" as an example of this form.

The socialistic bourgeois want all the advantages of modern social conditions without the struggles and dangers necessarily resulting therefrom. They desire the existing state of

society minus its revolutionary and disintegrating elements. They wish for a bourgeoisie without a proletariat. The bourgeoisie naturally conceives the world in which it is supreme to be the best; and bourgeois Socialism develops this comfortable conception into various more or less complete systems. In requiring the proletariat to carry out such a system, and thereby to march straightway into the social New Jerusalem, it but requires in reality that the proletariat should remain within the bounds of existing society, but should cast away all its hateful ideas concerning the bourgeoisie.

A second and more practical, but less systematic, form of this socialism sought to depreciate every revolutionary movement in the eyes of the working class by showing that no mere political reform, but only a change in the material conditions of existence, in economical relations, could be of any advantage to them. By changes in the material conditions of existence this form of Socialism, however, by no means signifies abolition of the bourgeois relations of production, an abolition that can be effected only by a revolution, but administrative reforms, based on the continued existence of these relations; reforms, therefore, that in no respect affect the relations between capital and labor, but, at the best, lessen the cost, and simplify the administrative work, of bourgeois government.

Bourgeois Socialism attains adequate expression when, and only when, it becomes a mere figure of speech.

Free trade: for the benefit of the working class. Protective duties: for the benefit of the working class. Prison reform: for the benefit of the working class. This is the last word and the only seriously meant word of bourgeois Socialism.

It is summed up in the phrase: the bourgeois is a bourgeois—for the benefit of the working class.

3. CRITICAL-UTOPIAN SOCIALISM AND COMMUNISM

We do not here refer to that literature which, in every great modern revolution, has always given voice to the demands of the proletariat: such as the writings of Babeuf and others.

The first direct attempts of the proletariat to attain its own

ends, made in times of universal excitement, when feudal society was being overthrown, these attempts necessarily failed, owing to the then undeveloped state of the proletariat, as well as to the absence of the economic conditions for its emancipation, conditions that had yet to be produced, and could be produced by the impending bourgeois epoch alone. The revolutionary literature that accompanied these first movements of the proletariat had necessarily a reactionary character. It inculcated universal ascetism and social leveling in its crudest form.

The Socialist and Communist systems properly so called, those of St. Simon, Fourier, Owen and others, spring into existence in the early undeveloped period, described above, of the struggle between proletariat and bourgeoisie (see Section I. Bourgeois and Proletarians).

The founders of these systems see, indeed, the class antagonisms, as well as the action of the decomposing elements in the prevailing form of society. But the proletariat, as yet in its infancy, offers to them the spectacle of a class without any historical initiative or any independent political movement.

Since the development of class antagonism keeps even pace with the development of industry, the economic situation, as they find it, does not as yet offer to them the material conditions for the emancipation of the proletariat. They therefore search after a new social science, after new social laws, that are to create these conditions.

Historical action is to yield to their personal inventive action, historically created conditions of emancipation to fantastic ones, and the gradual, spontaneous class organization of the proletariat to an organization of society specially contrived by these inventors. Future history resolves itself, in their eyes, into the propaganda and the practical carrying out of their social plans.

In the formation of their plans they are conscious of caring chiefly for the interests of the working-class, as being the most suffering class. Only from the point of view of being the most suffering class does the proletariat exist for them.

The undeveloped state of the class struggle, as well as their own surroundings, cause Socialists of this kind to consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favored. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class. For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society?

Hence, they reject all political, and especially all revolutionary action; they wish to attain their ends by peaceful means, and endeavor, by small experiments, necessarily doomed to failure, and by the force of example to pave the way for the new social Gospel.

Such fantastic pictures of future society, painted at a time when the proletariat is still in a very undeveloped state and has but a fantastic conception of its own position, correspond with the first instinctive yearnings of that class for a general reconstruction of society.

But these Socialist and Communist publications contain also a critical element. They attack every principle of existing society. Hence they are full of the most valuable materials for the enlightenment of the working class. The practical measures proposed in them, such as the abolition of the distinction between town and country, of the family, of the carrying on of industries for the account of private individuals, and of the wage system, the proclamation of social harmony, the conversion of the functions of the State into a mere superintendence of production, all these proposals point solely to the disappearance of class-antagonisms which were at that time only just cropping up, and which, in these publications, are recognized under the earliest, indistinct and undefined forms only. These proposals, therefore, are of a purely Utopian character.

The Significance of Critical-Utopian Socialism and Communism bears an inverse relation to historical development. In proportion as the modern class struggle develops and takes definite shape, this fantastic standing apart from the contest, these fantastic attacks on it lose all practical value and all

theoretical justification. Therefore, although the originators of these systems were in many respects revolutionary, their disciples have in every case formed mere reactionary sects. They hold fast by the original views of their masters, in opposition to the progressive historical development of the proletariat. They, therefore, endeavor, and that consistently, to deaden the class struggle and to reconcile the class antagonisms. They still dream of experimental realization of their social Utopias, of founding isolated "Phalanstères," of establishing "Home Colonies," of setting up a "Little Icaria"⁷—duodecimo editions of the New Jerusalem, and to realize all these castles in the air they are compelled to appeal to the feelings and purses of the bourgeois. By degree they sank into the category of the reactionary conservative Socialists depicted above, differing from these only by more systematic pedantry, and by their fanatical and superstitious belief in the miraculous effects of their social science.

They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new Gospel.

The Owenites in England, and the Fourierists in France, respectively oppose the Chartists and the "Reformistes."

IV

Position of the Communists in Relation to the Various Existing Opposition Parties

Section II has made clear the relations of the Communists to the existing working class parties, such as the Chartists in England and the Agrarian Reforms in America.

⁷ Phalanstères were Socialist colonies on the plan of Charles Fourier. Icaria was the name given by Cabot to his Utopia and, later on, to his American Communist colony.

The Communists fight for the attainment of the immediate aims, for the enforcement of the momentary interests of the working class; but in the movement of the present they also represent and take care of the future of that movement. In France the Communists ally themselves with the Social-Democrats⁸ against the conservative and radical bourgeoisie, reserving, however, the right to take up a critical position in regard to phrases and illusions traditionally handed down from the great Revolution.

In Switzerland they support the Radicals, without losing sight of the fact that this party consists of antagonistic elements, partly of Democratic Socialists, in the French sense, partly of radical bourgeois.

In Poland they support the party that insists on an agrarian revolution, as the prime condition for national emancipation, that party which fomented the insurrection of Cracow in 1846.

In Germany they fight with the bourgeoisie whenever it acts in a revolutionary way, against the absolute monarchy, the feudal squirearchy, and the petty bourgeoisie.

But they never cease for a single instant to instill into the working class the clearest possible recognition of the hostile antagonism between bourgeoisie and proletariat, in order that the German workers may straightway use, as so many weapons against the bourgeoisie, the social and political conditions that the bourgeoisie must necessarily introduce along with its supremacy, and in order that, after the fall of the reactionary classes in Germany, the fight against the bourgeoisie itself may immediately begin.

The Communists turn their attention chiefly to Germany, because that country is on the eve of a bourgeois revolution, that is bound to be carried out under more advanced conditions of European civilization, and with a more developed

⁸ The party then represented in parliament by Ledru-Rollin, in literature by Louis Blanc, in the daily press by the *Réforme*. The name of Social Democracy signified, with these its inventors, a section of the Democratic or Republican party more or less tinged with Socialism.

proletariat, than that of England was in the seventeenth and of France in the eighteenth century, and because the bourgeois revolution in Germany will be but the prelude to an immediately following proletarian revolution.

In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things.

In all these movements they bring to the front, as the leading question in each, the property question, no matter what its degree of development at the time.

Finally, they labor everywhere for the union and agreement of the democratic parties of all countries.

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communistic revolution. The proletarians have nothing to lose but their chains. They have a world to win.

Working men of all countries, unite!
